Introduction

**WARNING**

See the *Important Safety and Product Information* guide in the product box for product warnings and other important information.

Always consult your physician before you begin or modify any exercise program.

Device Overview

1. **LIGHT**: Select to turn the backlight on and off. Hold to view the controls menu. Hold to turn the device on.
   
   **NOTE**: While diving, hold functions are disabled.

2. **UP**: Select to view the activity list and start or stop an activity. Select to choose an option in a menu. Select for the dive compass, stopwatch, or gas switching during a dive.

3. **BACK**: Select to return to the previous screen. Select to record a lap, rest, or transition during a multisport activity.
   
   **NOTE**: While diving, key presses are enabled only in menus.

4. **DOWN**: Select to scroll through the widget loop and menus. Select to scroll through the data screens during a dive. Hold to view the watch face from any screen.

5. **UP MENU**: Select to scroll through the widget loop and menus. Hold to view the menu.
   
   **NOTE**: While diving, key presses are disabled.

6. **Double tap**: The device scrolls through the data screens during a dive.

Viewing the Controls Menu

The controls menu contains options, such as turning on do not disturb mode, locking the keys, and turning the device off.

**NOTE**: You can add, reorder, and remove the options in the controls menu (Customizing the Controls Menu, page 30).

1. From any screen, hold **LIGHT**.

2. Select **UP** or **DOWN** to scroll through the options.

Viewing Widgets

Your device comes preloaded with several widgets, and more are available when you pair your device with a smartphone.

- Select **UP** or **DOWN**.
  
  The device scrolls through the widget loop.

- Select ▲ to view additional options and functions for a widget.
- From any screen, hold **BACK** to return to the watch face.
- If you are recording an activity, select **BACK** to return to the activity data pages.

Charging the Device

**NOTICE**

To prevent corrosion, thoroughly clean and dry the contacts and the surrounding area before charging or connecting to a computer. Refer to the cleaning instructions in the appendix.

The device is powered by a built-in lithium-ion battery that you can charge using a standard wall outlet or a USB port on your computer.

1. Plug the USB end of the cable into an AC adapter or a computer USB port.

2. If necessary, plug the AC adapter into a standard wall outlet.

3. Pinch the sides of the charging cradle ① to open the arms on the cradle.

4. With the contacts aligned, place the device into the cradle ② and release the arms to hold the device in place.

5. Charge the device completely.

Pairing Your Smartphone with Your Device

To use the connected features of the Descent device, it must be paired directly through the Garmin Connect™ Mobile app, instead of from the Bluetooth® settings on your smartphone.

1. From the app store on your smartphone, install and open the Garmin Connect Mobile app.

2. Bring your smartphone within 10 m (33 ft.) of your device.

3. Select **LIGHT** to turn on the device.

   The first time you turn on the device, it is in pairing mode.

   **TIP**: You can hold **LIGHT** and select ▲ to manually enter pairing mode.

4. Select an option to add your device to your Garmin Connect account:
   
   - If this is the first time you are pairing a device with the Garmin Connect Mobile app, follow the on-screen instructions.
   
   - If you already paired another device with the Garmin Connect Mobile app, from the ≡≡ or ••• menu, select **Garmin Devices > Add Device**, and follow the on-screen instructions.
Diving

Diving Warnings

**WARNING**
- The diving features of this device are for use by certified divers only. This device should not be used as a sole dive computer. Failure to input the appropriate dive-related information into the device can lead to serious personal injury or death.
- Make sure that you fully understand the use, displays, and limitations of your device. If you have questions about this manual or the device, always resolve any discrepancies or confusion before diving with the device. Always remember that you are responsible for your own safety.
- There is always a risk of decompression sickness (DCS) for any dive profile even if you follow the dive plan provided by the dive tables or a diving device. No procedure, diving device, or dive table will eliminate the possibility of DCS or oxygen toxicity. An individual's physiological make up can vary from day to day. This device cannot account for these variations. You are strongly advised to remain well within the limits provided by this device to minimize the risk of DCS. You should consult a physician regarding your fitness before diving.
- Always use backup instruments, including a depth gauge, submersible pressure gauge, and timer or watch. You should have access to decompression tables when diving with this device.
- Perform pre-dive safety checks, such as checking proper device function and settings, display function, battery level, and tank pressure.
- This device should not be shared between multiple users for diving purposes. Diver profiles are user specific, and using another diver's profile can result in misleading information that could lead to injury or death.
- For safety reasons, you should never dive alone. Diving with a designated buddy. You should also stay with others for an extended time after a dive, because the potential onset of DCS may be delayed or triggered by surface activities.
- This device is not intended for commercial or professional dive activities. It is for recreational purposes only. Commercial or professional dive activities can expose the user to extreme depths or conditions that increase the risk of DCS.
- Do not dive with a gas if you have not personally verified its contents and input the analyzed value to the device. Failure to verify tank contents and input the appropriate gas values to the device will result in incorrect dive planning information and could result in serious injury or death.
- Diving with more than one gas mixture presents a much greater risk than diving with a single gas mixture. Mistakes related to the use of multiple gas mixtures may lead to serious injury or death.
- Always ensure a safe ascent. A rapid ascent increases the risk of DCS.
- Disabling the deco lockout feature on the device can result in an increased risk of DCS, which can result in personal injury or death. Disable this feature at your own risk.
- Violating a required decompression stop may result in serious injury or death. Never ascend above the displayed decompression stop depth.
- Always perform a safety stop between 3 and 5 meters (9.8 and 16.4 feet) for 3 minutes, even if no decompression stop is required.

Dive Modes
The Descent Mk1 device supports six dive modes. Each dive mode has four phases: dive pre-check, surface display, in-dive, and post-dive.

Single-Gas: Allows you to dive with a single gas blend.

Multi-Gas: Allows you to configure multiple gas blends and switch gases during your dive. This mode supports one bottom gas, and up to five additional gases for decompression or backup.
- **NOTE:** Backup gases are not used in no-decompression limit (NDL) and time to surface (TTS) decompression calculations until you activate them during a dive.

CCR: Allows you to configure two PO2 setpoints, closed-circuit (CC) gases, and open-circuit (OC) backup gases.

Gauge: Allows you to dive with basic bottom timer features.
- **NOTE:** After diving in gauge mode, the device can only be used in gauge or apnea mode for 24 hours.

Apnea: Allows you to free dive with apnea-specific dive data. This mode has a higher data refresh rate.

Apnea Hunt: Similar to the Apnea dive mode, but tuned specifically for spearfishers. Start and stop tones are disabled.

Using the Pool Dive Mode
When the device is in pool dive mode, the tissue load and decompression lockout features function normally, but dives are not saved to the dive log.

1. Hold LIGHT to view the controls menu.
2. Select ♂️.
   The pool dive mode turns off automatically at midnight.

Dive Setup
You can customize the dive settings based on your needs. Not all settings are applicable for all dive modes. You can also edit the settings before you start a dive.

Hold MENU, and select Dive Setup.

Gases: Sets the gas blends. You can enter the oxygen and helium content for the gas, and the device calculates the remaining percentage as the nitrogen content. You can have up to twelve gases for each gas dive mode. The Mode option allows you to set the intended use for the gas, such as decompression or backup.

Conservatism: Sets the level of conservatism for decompression calculations. Higher conservatism provides a shorter bottom time and a longer ascent time. The Custom option allows you to set a custom gradient factor.
- **NOTE:** Make sure you understand gradient factors before entering a custom level of conservatism.

Water Type: Allows you to select the water type.
PO2: Sets your decompression partial pressure of oxygen (PO2) threshold, in bar. You can adjust the PO2 warning and critical alert thresholds.

Alerts: Allows you to set alerts for depth and time. You can enable different alerts for different dive modes.

Safety Dive Stop: Allows you to change the safety stop duration.

End Dive Delay: Allows you to set the length of time before the device ends and saves a dive after surfacing.

CCR Setpoints: Allows you to set high and low PO2 setpoints for closed-circuit rebreather (CCR) dives. If the Auto mode is enabled, the device automatically switches to the high or low setpoint based on your current depth. For example, if you descend through the high setpoint depth or ascend through the low setpoint depth, the PO2 threshold switches to the high or low setpoint, respectively. Automatic setpoint depths must be at least 6.1 m (20 ft.) apart.

NOTE: If you manually change setpoints within 1.8 m (6 ft.) of an automatic switch depth, then automatic setpoint switching is disabled until you are more than 1.8 m (6 ft.) above or below the automatic switch depth. This prevents unintended setpoint switching.

Backlight: Allows you to adjust the backlight settings for dive activities.

Heart Rate: Allows you to enable or disable a heart rate monitor for dives. The Stored Strap Data option allows you enable a chest heart rate monitor, such as the HRM-Swim™ or HRM-Tri™ device, that stores heart rate data with the dive. You can view chest heart rate monitor data on your Garmin Connect account after you complete the dive.

Double Tap to Scroll: Allows you to double tap the device to scroll through the dive data screens.

Deco Lockout: Allows you to disable the decompression lockout feature. This feature prevents single-gas and multi-gas dives for 24 hours if you violate a decompression ceiling for more than three minutes.

NOTE: You can still disable the decompression lockout feature after violating a decompression ceiling.

Starting a Dive
1 From the watch face, select 
2 Select a dive mode (Dive Modes, page 2).
3 If necessary, select DOWN to edit the dive settings, such as the gases, water type, and alerts (Dive Setup, page 2).
4 Wait with your wrist out of the water until the device acquires GPS signals and GPS turns green.

The device requires GPS signals to save your dive entry location.

5 Select 
6 Descend to start your dive.

The activity timer starts automatically when you reach a depth of 1.2 m (4 ft.).

NOTE: If you start a dive without selecting a dive mode, the device uses the most recently used dive mode and settings.

7 Select DOWN to scroll through the data screens and dive compass.

TIP: You can also double tap the device to scroll through the screens.

When you return to the surface, the device automatically ends and saves the dive. You should keep your wrist out of the water while the device saves your dive exit location.

Dive Data Screens
During a single-gas, multi-gas, or closed-circuit rebreather (CCR) dive, you can view the current dive conditions, the dive compass, and physiological data (Viewing the Primary Gas Dive Data Screen, page 3, Navigating with the Dive Compass, page 3, Viewing Additional Gas Dive Data, page 4).

During a gauge dive, you can view the current dive conditions, the dive stopwatch, the dive compass, and heart rate data (Using the Dive Stopwatch, page 4, Navigating with the Dive Compass, page 3, Viewing Additional Gas Dive Data, page 4).

During an apnea or apnea hunt dive, you can view the current dive conditions, your surface time, details about your last dive, heart rate data, and the map (Diving with the Map, page 4).

TIP: In the activity settings, you can reorder the default data screens and add a dive stopwatch screen for gas dive activities (Customizing the Data Screens, page 26). You cannot customize the data fields for dive activities.

Viewing the Primary Gas Dive Data Screen

1 During a single-gas, multi-gas, or closed-circuit rebreather (CCR) dive, scroll to the first data screen.

2 When you pass the no-decompression limit (NDL) time or perform a safety stop, the data screen shows ascent information.

Navigating with the Dive Compass
1 During a single-gas, multi-gas, closed-circuit rebreather, or gauge dive, scroll to the dive compass.
The compass indicates your directional heading 1.
2 Select ▲ to set the heading.
The compass indicates deviations 2 from the set heading 3.
3 Select ▲, and select an option:
   • To reset the heading, select Reset Heading.
   • To change the heading by 180 degrees, select Set to Recip.
      NOTE: The compass indicates the reciprocal heading with a red mark.
   • To set to a 90-degree heading left or right, select Set to 90L or Set to 90R.
   • To clear the heading, select Clear Heading.

Viewing Additional Gas Dive Data
During a single-gas, multi-gas, closed-circuit rebreather, or gauge dive, scroll to the third data screen.

Using the Dive Stopwatch
TIP: You can add a simplified stopwatch screen to any of the gas dive modes (Customizing the Data Screens, page 26).
1 Start a Gauge dive.
2 Scroll to the stopwatch screen.
3 Select ▲ > Reset Avg. Depth to set the average depth to your current depth.

4 Select ▲ > Start Stopwatch.
5 Select an option:
   • To stop using the stopwatch, select ▲ > Stop Stopwatch.
   • To restart the stopwatch, select ▲ > Reset Stopwatch.

Diving with the Map
You can view the map during apnea surface intervals.
1 During an apnea dive activity, scroll to the map.
2 Select ▲, and select an option:
   • To pan or zoom the map, select Pan/Zoom.
      TIP: You can select ▲ to toggle between panning up and down, panning left and right, or zooming. You can hold ▲ to select the point indicated by the crosshairs.
   • To mark your location, select Save Location.
      TIP: You can select DOWN to change the icon.

Viewing the Surface Interval Widget
The widget displays your surface interval time, tissue load, and central nervous system (CNS) oxygen toxicity percentage.
1 From the watch face, select UP.
2 Select ▲ to view tissue details and oxygen toxicity units (OTU).
   NOTE: The OTU accumulated during a dive expire after 24 hours.

Viewing the Dive Log Widget
The widget displays a brief summary of your last recorded dive.
1 From the surface interval widget, select UP.
2 Select ▲ to view more information about a dive.
3 Select a dive.
4 Select an option:
   • To view additional information about the activity, select Details.
   • To view additional information about one of multiple apnea dives in the activity, select Dives, and select a dive.
   • To view the activity on a map, select Map.
      NOTE: The device shows your entry and exit locations if you waited for GPS signals before and after the dive.
   • To view the depth profile of the activity, select Depth Profile.
   • To view the temperature profile of the activity, select Temperature Profile.

Dive Planning
You can plan for future dives using your device. The device can calculate no-decompression limit (NDL) times or create decompression plans. When planning a dive, the device uses your residual tissue load from recent dives in the calculations.

Calculating NDL Time
You can calculate the no-decompression limit (NDL) time or maximum depth for a future dive. These calculations are not saved or applied to your next dive.
1 Select ▲ > Plan Dive > Compute NDL.
2 Enter an oxygen percentage.
3 Select an option:
   • To calculate the NDL time, select Enter Depth, and enter the planned depth for your dive.
   • To calculate the maximum depth, select Enter Time, and enter your planned dive time.
The NDL countdown clock, depth, and maximum operating depth (MOD) appear.
4 Select DOWN.
5 Select an option:
   • To exit, select Done.
   • To add intervals to your dive, select Add Repeat Dive, and follow the on-screen instructions.

Creating a Decompression Plan
You can create open-circuit decompression plans and save them for future dives.
1 Select ▲ > Plan Dive > Deco Plans > Add New.
2 Enter a name for the decompression plan.
3 Select an option:
   • Select PO2 to enter the maximum partial pressure of oxygen, in bar.
     NOTE: The device uses the PO2 value for gas switching.
   • Select Conservatism to enter your level of conservatism for decompression calculations.
   • Select Gases to enter your gas blends.
   • Select Bottom Depth to enter the maximum dive depth.
   • Select Bottom Time to enter the time at the bottom depth.
4 Select Save.

Viewing and Applying a Decompression Plan
You can replace the current single-gas or multi-gas dive settings with the settings from a decompression plan.
1 Select ▲ > Plan Dive > Deco Plans.
2 Select a decompression plan.
3 If necessary, select View to view the decompression plan, then select BACK.
4 Select Apply to use the decompression plan settings for the single-gas or multi-gas dive mode.

Editing a Decompression Plan
1 Select ▲ > Plan Dive > Deco Plans.
2 Select a decompression plan.
3 Select an option:
   • Select Edit to change the decompression plan details.
   • Select Rename to edit the name of the decompression plan.
4 Edit the information.

Deleting a Decompression Plan
1 Select ▲ > Plan Dive > Deco Plans.
2 Select a decompression plan.
3 Select Delete > ✓.

No-Fly Time
After a dive, serrat appears on the default watch face, along with a no-fly time estimate in hours. You should not fly in an airplane during this time. After a gauge dive or a dive that violated the decompression plan, the no-fly time is set to 48 hours.
TIP: You can add the no-fly indicator to a custom watch face (Customizing the Watch Face, page 30).

Tips for Wearing the Device with an Exposure Suit
• Use the extra long silicone diving band to wear the device over a thick exposure suit.
• Use the extension 1 on the titanium watch band to increase the length of the band.

Dive Alerts

</tr>
<tr>
<td>CNS toxicity at %1.</td>
<td>Your CNS oxygen toxicity is too high.</td>
<td>The alert appears every two minutes until you end the dive.</td>
</tr>
</tbody>
</table>

For accurate heart rate measurements, make sure the exposure suit and other wrist-worn devices do not interfere with the wrist-based heart rate monitor (Wearing the Device, page 12).
### Activities and Apps

Your device can be used for indoor, outdoor, athletic, and fitness activities. When you start an activity, the device displays and records sensor data. You can save activities and share them with the Garmin Connect community.

You can also add Connect IQ™ activities and apps to your device using the Connect IQ website (Connect IQ Features, page 12).

For more information about activity tracking and fitness metric accuracy, go to garmin.com/ataccuracy.

### Starting an Activity

When you start an activity, GPS turns on automatically (if required). When you stop the activity, the device returns to watch mode.

1. From the watch face, select .
2. Select an activity.
3. If necessary, follow the on-screen instructions to enter additional information.
4. If necessary, wait while the device connects to your ANT+® sensors.
5. If the activity requires GPS, go outside, and wait while the device locates satellites.
6. Select  to start the timer.

**NOTE:** The device does not record your activity data until you start the timer.

### Tips for Recording Activities

- Charge the device before starting an activity (Charging the Device, page 1).
- Select BACK to record laps.
- Select UP or DOWN to view additional data pages.

### Stopping an Activity

1. Select .
2. Select an option:
   - To resume your activity, select Resume.
   - To save the activity and return to watch mode, select Save.
   - To suspend your activity and resume it at a later time, select Resume Later.
   - To mark a lap, select Lap.
   - To navigate back to the starting point of your activity along the path you traveled, select Back to Start > TracBack.

**NOTE:** This feature is available only for activities that use GPS.
- To navigate back to the starting point of your activity by the most direct path, select Back to Start > Route.

**NOTE:** This feature is available only for activities that use GPS.
- To discard the activity and return to watch mode, select Discard > Yes.

**NOTE:** After stopping the activity, the device saves it automatically after 30 minutes.

### Adding or Removing a Favorite Activity

The list of your favorite activities appears when you press  from the watch face, and it provides quick access to the activities you use most. The first time you press  to start an activity, the device prompts you to select your favorite activities.

You can add or remove favorite activities at any time.

1. Hold MENU.
2. Select Settings > Activities & Apps.

Your favorite activities appear at the top of the list with a white background. Other activities appear with a black background.

3. Select an option:
   - To add a favorite activity, select the activity, and select Set as Favorite.
   - To remove a favorite activity, select the activity, and select Remove from Favorites.

### Creating a Custom Activity

1. From the watch face, select  > Add.
2. Select an option:
   - Select Copy Activity to create your custom activity starting from one of your saved activities.
   - Select Other to create a new custom activity.
3. If necessary, select an activity type.
4. Select a name or enter a custom name.

Duplicate activity names include a number, for example: Bike(2).

5. Select an option:
   - Select an option to customize specific activity settings. For example, you can select an accent color or customize the data screens.
   - Select Done to save and use the custom activity.
6. Select Yes to add the activity to your list of favorites.

### Indoor Activities

The Descent device can be used for training indoors, such as running on an indoor track or using a stationary bike. GPS is turned off for indoor activities.

When running or walking with GPS turned off, speed, distance, and cadence are calculated using the accelerometer in the device. The accelerometer is self-calibrating. The accuracy of the speed, distance, and cadence data improves after a few outdoor runs or walks using GPS.

### Alert Message | Cause | Device Action
--- | --- | ---
250 OTU accumulated. | Your oxygen toxicity units (OTU) are at 80% of the safe limit (250 units). | None
%1 OTU accumulated. End your dive now. | Your oxygen toxicity units are above the safe limit. During a dive, “%1” is replaced with the number of units accumulated. | The alert appears every two minutes until you end the dive.
NDL exceeded. Decompression now required. | You have exceeded your no decompression limit (NDL) time. | None
Approaching NDL | You are at 80% of your tissue load. | None
Battery is low. | Less than 20% battery power remains. | The alert appears when the device is below 20% battery power and on the dive pre-check screen.
Battery critically low. End your dive now. | Less than 10% battery power remains. | The alert appears when the device is below 10% battery power and on the dive pre-check screen.
**Calibrating the Treadmill Distance**

To record more accurate distances for your treadmill runs, you can calibrate the treadmill distance after you run at least 1.5 km (1 mi.) on a treadmill. If you use different treadmills, you can manually calibrate the treadmill distance on each treadmill or after each run.

1. Start a treadmill activity (*Starting an Activity, page 6*), and run at least 1.5 km (1 mi.) on the treadmill.
2. After you complete your run, select ▲.
3. Select an option:
   - To calibrate the treadmill distance the first time, select Save. The device prompts you to complete the treadmill calibration.
   - To manually calibrate the treadmill distance after the first-time calibration, select Calibrate & Save > Yes.
4. Check the treadmill display for the distance traveled, and enter the distance on your device.

**Recording a Strength Training Activity**

You can record sets during a strength training activity. A set is multiple repetitions (reps) of a single move.

1. From the watch face, select ▲ > Strength. The first time you record a strength training activity, you will select which wrist your watch is on.
2. Select ▲ to start the set timer.
3. Start your first set. The device counts your reps. Your rep count appears when you complete at least six reps.
4. Select BACK to finish the set. The watch displays the total reps for the set. After several seconds, the rest timer appears.
5. If necessary, hold MENU, select Edit Last Set, and edit the number of reps.
6. When you are done resting, select BACK to start your next set.
7. Repeat for each strength training set until your activity is complete.
8. After your last set, select ▲ to stop the set timer.
9. Select Save.

**Outdoors Activities**

The Descent device comes preloaded with outdoor activities, such as running and cycling. GPS is turned on for outdoor activities. You can add new activities based on default activities, such as walking or rowing. You can also add custom activities to your device (*Creating a Custom Activity, page 6*).

**Viewing Your Ski Runs**

Your device records the details of each downhill skiing or snowboarding run using the auto run feature. This feature is turned on by default for downhill skiing and snowboarding. It automatically records new ski runs based on your movement.
Duplicate activity names include a number. For example, Triathlon(2).

3 Select two or more activities.
4 Select an option:
   • Select an option to customize specific activity settings. For example, you can select whether to include transitions.
   • Select Done to save and use the multisport activity.
5 Select Yes to add the activity to your list of favorites.

Tips for Triathlon Training or Using Multisport Activities
• Select ▲ to start your first activity.
• Select BACK to transition to the next activity.
   If transitions are turned on, the transition time is recorded separately from the activity times.
• If necessary, select BACK to start the next activity.
• Select UP or DOWN to view additional data pages.

Swimming
NOTE: The device cannot record wrist heart rate data while swimming.

Swim Terminology
Length: One trip down the pool.
Interval: One or more consecutive lengths. A new interval starts after a rest.
Stroke: A stroke is counted every time your arm wearing the device completes a full cycle.
Swolf: Your swolf score is the sum of the time for one pool length and the number of strokes for that length. For example, 30 seconds plus 15 strokes equals a swolf score of 45. For open water swimming, swolf is calculated over 25 meters. Swolf is a measurement of swimming efficiency and, like golf, a lower score is better.

Stroke Types
Stroke type identification is available only for pool swimming. Your stroke type is identified at the end of a length. Stroke types appear when you are viewing interval history. You can also select stroke type as a custom data field (Customizing the Data Screens, page 26).

<table>
<thead>
<tr>
<th>Free</th>

<tr>
<td>Mixed</td>
<td>More than one stroke type in an interval</td>
</tr>
<tr>
<td>Drill</td>
<td>Used with drill logging (Training with the Drill Log, page 8)</td>
</tr>
</tbody>
</table>

Tips for Swimming Activities
• Before starting a pool swimming activity, follow the on-screen instructions to select your pool size or enter a custom size.
   The next time you start a pool swimming activity, the device uses this pool size. You can hold MENU, select the activity settings, and select Pool Size to change the size.
• Select BACK to record a rest during pool swimming.
   The device automatically records swim intervals and lengths for pool swimming.

Resting During Pool Swimming
The default rest screen displays two rest timers. It also displays time and distance for the last completed interval.
NOTE: Swim data is not recorded during a rest.
1 During your swim activity, select BACK to start a rest.
   The display reverses to white text on a black background, and the rest screen appears.
2 During a rest, select UP or DOWN to view other data screens (optional).
3 Select BACK, and continue swimming.
4 Repeat for additional rest intervals.

Training with the Drill Log
The drill log feature is available only for pool swimming. You can use the drill log feature to manually record kick sets, one-arm swimming, or any type of swimming that is not one of the four major strokes.
1 During your pool swim activity, select UP or DOWN to view the drill log screen.
2 Select BACK to start the drill timer.
3 After you complete a drill interval, select BACK.
   The drill timer stops, but the activity timer continues to record the entire swim session.
4 Select a distance for the completed drill.
   Distance increments are based on the pool size selected for the activity profile.
5 Select an option:
   • To start another drill interval, select BACK.
   • To start a swim interval, select UP or DOWN to return to the swim training screens.

Golfing
Playing Golf
Before you play golf, you should charge the device (Charging the Device, page 1).
1 From the watch face, select ▲ > Golf.
2 Go outside, and wait while the device locates satellites.
3 Select a course from the list of available courses.
4 Select Yes to keep score.
5 Select UP or DOWN to scroll through the holes.
   The device automatically transitions when you move to the next hole.
6 After you complete your activity, select ▲ > End Round > Yes.

Hole Information
Because pin locations change, the device calculates the distance to the front, middle, and back of the green, but not the actual pin location.
Moving the Flag
You can take a closer look at the green and move the pin location.
1 From the hole information screen, select \( \uparrow \) > Move Flag.
2 Select UP or DOWN to move the pin position.
3 Select \( \uparrow \).
   The distances on the hole information screen are updated to show the new pin location. The pin position is saved for only the current round.

Viewing Hazards
You can view distances to hazards along the fairway for par 4 and 5 holes. Hazards that affect shot selection are displayed individually or in groups to help you determine the distance to layup or carry.
1 From the hole information screen, select \( \uparrow \) > Hazards.

- The distances to the front 1 and back 2 of the nearest hazard appear on the screen.
- The hazard type 3 is listed at the top of the screen.
- The green is represented as a half circle 4 at the top of the screen. The line below the green represents the center of the fairway.
- Hazards 5 are shown below the green in approximate locations relative to the fairway.
2 Select UP or DOWN to view other hazards for the current hole.

Viewing Measured Shots
Before the device can automatically detect and measure shots, you must enable scoring.
Your device features automatic shot detection and recording. Each time you take a shot along the fairway, the device records your shot distance so you can view it later.

TIP: Automatic shot detection works best when you wear the device on your leading wrist and make good contact with the ball. Putts are not detected.
1 While playing golf, select \( \uparrow \) > Measure Shot.
   Your last shot distance appears.
   NOTE: The distance automatically resets when you hit the ball again, putt on the green, or move to the next hole.
2 Select DOWN to view all recorded shot distances.

Viewing Layup and Dogleg Distances
You can view a list of layup and dogleg distances for par 4 and 5 holes.

Select \( \uparrow \) > Layups.
Each layup and the distance until you reach each layup appear on the screen.
NOTE: Distances are removed from the list as you pass them.

Keeping Score
1 From the hole information screen, select \( \uparrow \) > Scorecard.
The scorecard appears when you are on the green.
2 Select UP or DOWN to scroll through the holes.
3 Select \( \uparrow \) to select a hole.
4 Select UP or DOWN to set the score.
   Your total score is updated.

Updating a Score
1 From the hole information screen, select \( \uparrow \) > Scorecard.
2 Select UP or DOWN to scroll through the holes.
3 Select \( \uparrow \) to select a hole.
4 Select UP or DOWN to change the score for that hole.
   Your total score is updated.

TruSwing™
The TruSwing feature allows you to view swing metrics recorded from your TruSwing device. Go to www.garmin.com/golf to purchase a TruSwing device.

Using the Golf Odometer
You can use the odometer to record the time, distance, and steps traveled. The odometer automatically starts and stops when you start or end a round.
1 Select \( \uparrow \) > Odometer.
2 If necessary, select Reset to reset the odometer to zero.

Tracking Statistics
The Stat Tracking feature enables detailed statistics tracking while playing golf.
1 From the hole information screen, hold MENU.
2 Select the activity settings.
3 Select Stat Tracking to enable tracking statistics.

Connected Features
Connected features are available for your Descent device when you connect the device to a compatible smartphone using Bluetooth wireless technology. Some features require you to install the Garmin Connect Mobile app on the connected smartphone. Go to www.garmin.com/apps for more information. Some features are also available when you connect your device to a wireless network.

Phone notifications: Displays phone notifications and messages on your Descent device.
LiveTrack: Allows friends and family to follow your races and training activities in real time. You can invite followers using email or social media, allowing them to view your live data on a Garmin Connect tracking page.
GroupTrack: Allows you to keep track of your connections using LiveTrack directly on screen and in real time.
Activity uploads to Garmin Connect: Automatically sends your activity to your Garmin Connect account as soon as you finish recording the activity.
Connect IQ: Allows you to extend your device features with new watch faces, widgets, apps, and data fields.
Bluetooth sensors: Allows you to connect Bluetooth compatible sensors, such as a heart rate monitor.
Find my phone: Locates your lost smartphone that is paired with your Descent device and currently within range.
Find my device: Locates your lost Descent device that is paired with your smartphone and currently within range.

Enabling Bluetooth Notifications
Before you can enable notifications, you must pair the Descent device with a compatible mobile device (Pairing Your Smartphone with Your Device, page 1).
1 Hold MENU.
2 Select Settings > Phone > Smart Notifications > Status > On.
3 Select During Activity.
4 Select a notification preference.
5 Select a sound preference.
6 Select Not During Activity.
7 Select a notification preference.
8 Select a sound preference.
9 Select Timeout.
10 Select the amount of time the alert for a new notification appears on the screen.

Viewing Notifications
1 From the watch face, select UP to view the notifications widget.
2 Select ⚪, and select a notification.
3 Select DOWN for more options.
4 Select BACK to return to the previous screen.

Receiving an Incoming Phone Call
When you receive a phone call on your connected smartphone, the Descent device displays the name or phone number of the caller. You can accept or decline the call. If your device is connected to a smartphone with Android™, you can also decline with a text message by selecting from a list of messages on your device.
- To accept the call, select Accept.
- To decline the call, select Decline.
- To decline the call and immediately send a text message reply, select Reply, and select a message from the list.

Replying to a Text Message
NOTE: This feature is available only for smartphones with Android.
When you receive a text message notification on your Descent device, you can send a quick reply by selecting from a list of messages. You can customize messages in the Garmin Connect Mobile app.
NOTE: This feature sends text messages using your phone. Regular text message limits and charges from your carrier and phone plan may apply. Contact your mobile carrier for more information about text message charges or limits.
1 From the watch face, select UP to view the notifications widget.
2 Select ⚪, and select a text message notification.
3 Select DOWN > Reply.
4 Select a message from the list.
Your phone sends the selected message as an SMS text message.

Managing Notifications
You can use your compatible smartphone to manage notifications that appear on your Descent Mk1 device.
Select an option:
- If you are using an Apple® smartphone, use the notifications settings on your smartphone to select the items to show on the device.
- If you are using a smartphone with Android, from the Garmin Connect Mobile app, select Settings > Smart Notifications.

Turning On and Off Smartphone Connection Alerts
You can set the Descent Mk1 device to alert you when your paired smartphone connects and disconnects using Bluetooth wireless technology.
NOTE: Smartphone connection alerts are turned off by default.
1 Hold MENU.
2 Select Settings > Phone > Alerts.

Locating a Lost Mobile Device
You can use this feature to help locate a lost mobile device that is paired using Bluetooth wireless technology and currently within range.
1 Hold LIGHT to view the controls menu.
2 Select ☰.
The Descent device begins searching for your paired mobile device. An audible alert sounds on your mobile device, and the Bluetooth signal strength displays on the Descent device screen. The Bluetooth signal strength increases as you move closer to your mobile device.
3 Select BACK to stop searching.

Garmin Connect
Your Garmin Connect account allows you to track your performance and connect with your friends. It gives you the tools to track, analyze, share, and encourage each other. You can record the events of your active lifestyle, including runs, walks, rides, swims, hikes, golf games, and more.
You can create your free Garmin Connect account when you pair your device with your phone using the Garmin Connect Mobile app. You can also create an account when you set up the Garmin Express application (www.garmin.com/express).

Store your activities: After you complete and save a timed activity with your device, you can upload that activity to your Garmin Connect account and keep it as long as you want.
Analyze your data: You can view more detailed information about your fitness and outdoor activities, including time, distance, heart rate, calories burned, cadence, an overhead map view, and pace and speed charts. You can view more detailed information about your golf games, including scorecards, statistics, and course information. You can also view customizable reports.
NOTE: To view some data, you must pair an optional wireless sensor with your device (Pairing Your Wireless Sensors, page 32).

Turning Off the Bluetooth Smartphone Connection
1 Hold LIGHT to view the controls menu.
2 Select ☰ to turn off the Bluetooth smartphone connection on your Descent device.

Track your progress: You can track your daily steps, join a friendly competition with your connections, and meet your goals.
Share your activities: You can connect with friends to follow each other's activities or post links to your activities on your favorite social networking sites.

Manage your settings: You can customize your device and user settings on your Garmin Connect account.

Updating the Software Using Garmin Connect Mobile
Before you can update your device software using the Garmin Connect Mobile app, you must have a Garmin Connect account, and you must pair the device with a compatible smartphone (Pairing Your Smartphone with Your Device, page 1).

Synchronize your device with the Garmin Connect Mobile app (Manually Syncing Data with Garmin Connect Mobile, page 11).

When new software is available, the Garmin Connect Mobile app automatically sends the update to your device.

Updating the Software Using Garmin Express
Before you can update your device software, you must download and install the Garmin Express application and add your device (Using Garmin Connect on Your Computer, page 11).

1 Connect the device to your computer using the USB cable. When new software is available, the Garmin Express application sends it to your device.
2 After the Garmin Express application finishes sending the update, disconnect the device from your computer.

Your device installs the update.

Using Garmin Connect on Your Computer
The Garmin Express application connects your device to your Garmin Connect account using a computer. You can use the Garmin Express application to upload your activity data to your Garmin Connect account and to send data, such as workouts or training plans, from Garmin Connect website to your device. You can also install device software updates and manage your Connect IQ apps.

1 Connect the device to your computer using the USB cable.
2 Go to www.garmin.com/express.
3 Download and install the Garmin Express application.
4 Open the Garmin Express application, and select Add Device.
5 Follow the on-screen instructions.

Manually Syncing Data with Garmin Connect Mobile

1 Hold LIght to view the controls menu.
2 Select C.

Garmin Golf™ App
The Garmin Golf app allows golfers to compete with each other at different courses. More than 41,000 courses have a weekly leaderboard that anyone can join. You can set up a tournament event and invite players to compete. You can upload scorecards from your compatible Garmin device to view detailed statistics and shot analyses.

The Garmin Golf app syncs your data with your Garmin Connect account. You can download the Garmin Golf app from the app store on your smartphone.

Starting a GroupTrack Session
Before you can start a GroupTrack session, you must have a Garmin Connect account, a compatible smartphone, and the Garmin Connect Mobile app.

These instructions are for starting a GroupTrack session with Descent Mk1 devices. If your connections have other compatible devices, you can see them on the map. The other devices may not be able to display GroupTrack riders on the map.

1 Go outside, and turn on the Descent Mk1 device.
2 Pair your smartphone with the Descent Mk1 device (Pairing Your Smartphone with Your Device, page 1).
3 On the Descent Mk1 device, hold MENU, and select Settings > GroupTrack > Show on Map to enable viewing connections on the map screen.
4 In the Garmin Connect Mobile app, from the settings menu, select LiveTrack > GroupTrack.
5 If you have more than one compatible device, select a device for the GroupTrack session.
6 Select Visible to > All Connections.
7 Select Start LiveTrack.
8 On the Descent Mk1 device, start an activity.
9 Scroll to the map to view your connections.

TIP: From the map, you can hold MENU and select Nearby Connections to view distance, direction, and pace or speed information for other connections in the GroupTrack session.

Tips for GroupTrack Sessions
The GroupTrack feature allows you to keep track of other connections in your group using LiveTrack directly on the screen. All members of the group must be your connections in your Garmin Connect account.

• Start your activity outside using GPS.
• Pair your Descent Mk1 device with your smartphone using Bluetooth technology.
• In the Garmin Connect Mobile app, from the settings menu, select Connections to update the list of connections for your GroupTrack session.
• Make sure all of your connections pair to their smartphones and start a LiveTrack session in the Garmin Connect Mobile app.
• Make sure all your connections are in range (40 km or 25 mi.).
• During a GroupTrack session, scroll to the map to view your connections (Adding a Map to an Activity, page 26).

Wi-Fi® Connected Features
Some Descent Mk1 models have Wi-Fi connected features. The Garmin Connect Mobile app is not required for you to use Wi-Fi connectivity.

Activity uploads to your Garmin Connect account:
Automatically sends your activity to your Garmin Connect account as soon as you finish recording the activity.

Workouts and training plans:
Allows you to browse for and select workouts and training plans on the Garmin Connect site. The next time your device has a Wi-Fi connection, the files are wirelessly sent to your device.

Software updates:
Allows your device to download the latest software update when a Wi-Fi connection is available. The next time you turn on or unlock the device, you can follow the on-screen instructions to install the software update.

Connecting to a Wi-Fi Network
You must connect your device to the Garmin Connect Mobile app on your smartphone or to the Garmin Express application on your computer before you can connect to a Wi-Fi network.

1 Hold MENU.
2 Select Settings > Wi-Fi > My Networks > Add Network.
   The device displays a list of nearby Wi-Fi networks.
3 Select a network.
4 If necessary, enter the password for the network.
The device connects to the network, and the network is added to the list of saved networks. The device reconnects to this network automatically when it is within range.

Connect IQ Features
You can add Connect IQ features to your watch from Garmin and other providers using the Connect IQ website. You can customize your device with watch faces, data fields, widgets, and apps.

NOTE: For your safety, Connect IQ features are not available while diving. This ensures that all dive capabilities function as designed.

Watch Faces: Allow you to customize the appearance of the clock.
Data Fields: Allow you to download new data fields that present sensor, activity, and history data in new ways. You can add Connect IQ data fields to built-in features and pages.
Widgets: Provide information at a glance, including sensor data and notifications.
Apps: Add interactive features to your watch, such as new outdoor and fitness activity types.

Downloading Connect IQ Features Using Your Computer
1 Connect the device to your computer using a USB cable.
2 Go to apps.garmin.com, and sign in.
3 Select a Connect IQ feature, and download it.
4 Follow the on-screen instructions.

Heart Rate Features
The Descent Mk1 device has a wrist-based heart rate monitor and is also compatible with chest heart rate monitors (sold separately). You can view heart rate data on the heart rate widget. If both wrist-based heart rate and chest heart rate data are available, your device uses the chest heart rate data.

Wrist-based Heart Rate
Wearing the Device
• Wear the device above your wrist bone.
  NOTE: The device should be snug but comfortable. For more accurate heart rate readings on the Descent Mk1 device, it should not move while running or exercising.

NOTE: While diving, the device should stay in contact with your skin, and it should not bump into other wrist-worn devices.
  NOTE: The optical sensor is located on the back of the device.
• See Tips for Erratic Heart Rate Data, page 12 for more information about wrist-based heart rate.
• For more information about accuracy, go to garmin.com /ataccuracy.

Tips for Erratic Heart Rate Data
If the heart rate data is erratic or does not appear, you can try these tips.
  • Clean and dry your arm before putting on the device.
  • Avoid wearing sunscreen, lotion, and insect repellent under the device.
  • Avoid scratching the heart rate sensor on the back of the device.
  • Wear the device above your wrist bone. The device should be snug but comfortable.
  • Wait until the ❤ icon is solid before starting your activity.
  • Warm up for 5 to 10 minutes and get a heart rate reading before starting your activity.
  NOTE: In cold environments, warm up indoors.
  • Rinse the device with fresh water after each workout.

Viewing the Heart Rate Widget
The widget displays your current heart rate in beats per minute (bpm) and a graph of your heart rate for the last 4 hours.
1 From the watch face, select DOWN.
2 Select ➤ to view your average resting heart rate values for the last 7 days.

Broadcasting Heart Rate Data to Garmin Devices
You can broadcast your heart rate data from your Descent Mk1 device and view it on paired Garmin devices.

NOTE: Broadcasting heart rate data decreases battery life.
1 From the heart rate widget, hold MENU.
2 Select Options > Broadcast Heart Rate.
  The Descent Mk1 device starts broadcasting your heart rate data, and (.fetchone) appears.
  NOTE: You can view only the heart rate widget while broadcasting heart rate data from the heart rate widget.
3 Pair your Descent Mk1 device with your Garmin ANT+ compatible device.
  NOTE: The pairing instructions differ for each Garmin compatible device. See your owner’s manual.
  TIP: To stop broadcasting your heart rate data, select any key, and select Yes.

Broadcasting Heart Rate Data During an Activity
You can set up your Descent Mk1 device to broadcast your heart rate data automatically when you begin an activity. For example, you can broadcast your heart rate data to an Edge® device while cycling, or to a VIRB® action camera during an activity.

NOTE: Broadcasting heart rate data decreases battery life.
NOTE: Broadcasting heart rate data is not available for dive activities.
1 From the heart rate widget, hold MENU.
2 Select Options > Broadcast During Activity.
3 Begin an activity (Starting an Activity, page 6).
  The Descent Mk1 device starts broadcasting your heart rate data in the background.
  NOTE: There is no indication that the device is broadcasting your heart rate data during an activity.
4 If necessary, pair your Descent Mk1 device with your Garmin ANT+ compatible device.
Setting an Abnormal Heart Rate Alert
You can set the device to alert you when your heart rate exceeds a certain number of beats per minute (bpm) after a period of inactivity.
1. From the heart rate widget, hold MENU.
2. Select Options > Abnormal HR Alert > Status > On.
3. Select Alert Threshold.
4. Select a heart rate threshold value.
Each time you exceed the threshold value, a message appears and the device vibrates.

Turning Off the Wrist-based Heart Rate Monitor
The default value for the Wrist Heart Rate setting is Auto. The device automatically uses the wrist-based heart rate monitor unless you pair an ANT+ heart rate monitor to the device.
1. From the heart rate widget, hold MENU.
2. Select Options > Status > Off.

Putting On the Heart Rate Monitor
You should wear the heart rate monitor directly on your skin, just below your sternum. It should be snug enough to stay in place during your activity.
1. If necessary, attach the strap extender to the heart rate monitor.
2. Wet the electrodes on the back of the heart rate monitor to create a strong connection between your chest and the transmitter.
3. Wear the heart rate monitor with the Garmin logo facing right-side up.

The loop and hook connection should be on your right side.
4. Wrap the heart rate monitor around your chest, and connect the strap hook to the loop.

NOTE: Make sure the care tag does not fold over. After you put on the heart rate monitor, it is active and sending data.

Tips for Erratic Heart Rate Data
If the heart rate data is erratic or does not appear, you can try these tips.
- Reapply water to the electrodes and contact patches (if applicable).
- Tighten the strap on your chest.
- Warm up for 5 to 10 minutes.
- Follow the care instructions (Caring for the Heart Rate Monitor, page 13).
- Wear a cotton shirt or thoroughly wet both sides of the strap.
- Synthetic fabrics that rub or flap against the heart rate monitor can create static electricity that interferes with heart rate signals.
- Move away from sources that can interfere with your heart rate monitor.
- Sources of interference may include strong electromagnetic fields, some 2.4 GHz wireless sensors, high-voltage power lines, electric motors, ovens, microwave ovens, 2.4 GHz cordless phones, and wireless LAN access points.

Caring for the Heart Rate Monitor

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>A buildup of sweat and salt on the strap can decrease the ability of the heart rate monitor to report accurate data.</td>
</tr>
</tbody>
</table>
- Rinse the heart rate monitor after every use.
- Hand wash the heart rate monitor after every seven uses or one pool swim, using a tiny amount of mild detergent, such as dishwashing liquid.
  - NOTE: Using too much detergent may damage the heart rate monitor.
- Do not put the heart rate monitor in a washing machine or dryer.
- When drying the heart rate monitor, hang it up or lay it flat.

Running Dynamics
You can use your compatible Descent device paired with the HRM-Run™ accessory or other running dynamics accessory to provide real-time feedback about your running form. If your Descent device was packaged with the HRM-Run accessory, the devices are already paired.

The running dynamics accessory has an accelerometer that measures torso movement in order to calculate six running metrics.
- **Cadence**: Cadence is the number of steps per minute. It displays the total steps (right and left combined).
- **Vertical oscillation**: Vertical oscillation is your bounce while running. It displays the vertical motion of your torso, measured in centimeters.
- **Ground contact time**: Ground contact time is the amount of time in each step that you spend on the ground while running. It is measured in milliseconds.
  - NOTE: Ground contact time and balance are not available while walking.
- **Ground contact time balance**: Ground contact time balance displays the left/right balance of your ground contact time while running. It displays a percentage. For example, 53.2 with an arrow pointing left or right.
- **Stride length**: Stride length is the length of your stride from one footfall to the next. It is measured in meters.
- **Vertical ratio**: Vertical ratio is the ratio of vertical oscillation to stride length. It displays a percentage. A lower number typically indicates better running form.

Training with Running Dynamics
Before you can view running dynamics, you must put on a running dynamics accessory, such as the HRM-Run accessory, and pair it with your device (Pairing Your Wireless Sensors, page 32). If your Descent Mk1 was packaged with the accessory, the devices are already paired, and the Descent Mk1 is set to display running dynamics data screens.
1 Select an option:
   • If your running dynamics accessory and Descent Mk1 device are already paired, skip to step 7.
   • If your running dynamics accessory and Descent Mk1 device are not already paired, complete all the steps in this procedure.

2 Hold MENU.
3 Select Settings > Activities & Apps.
4 Select an activity.

Color Gauges and Running Dynamics Data
The running dynamics screens display a color gauge for the primary metric. You can display cadence, vertical oscillation, ground contact time, ground contact time balance, or vertical ratio as the primary metric. The color gauge shows you how your running dynamics data compare to those of other runners. The color zones are based on percentiles.

Garmin has researched many runners of all different levels. The data values in the red or orange zones are typical for less experienced or slower runners. The data values in the green, blue, or purple zones are typical for more experienced or faster runners. More experienced runners tend to exhibit shorter ground contact times, lower vertical oscillation, lower vertical ratio, and higher cadence than less experienced runners. However, taller runners typically have slightly slower cadences, longer strides, and slightly higher vertical oscillation. Vertical ratio is your vertical oscillation divided by stride length. It is not correlated with height.

Go to www.garmin.com/runningdynamics for more information on running dynamics. For additional theories and interpretations of running dynamics data, you can search reputable running publications and websites.

<table>

<td>&gt;308 ms</td>
</tr>
</tbody>
</table>

Ground Contact Time Balance Data
Ground contact time balance measures your running symmetry and appears as a percentage of your total ground contact time. For example, 51.3% with an arrow pointing left indicates the runner is spending more time on the ground when on the left foot. If your data screen displays both numbers, for example 48–52, 48% is the left foot and 52% is the right foot.

<table>

<td>50.7% L–50.7% R</td>
<td>50.8–52.2% R</td>
<td>&gt;52.2% R</td>
</tr>
</tbody>
</table>

While developing and testing running dynamics, the Garmin team found correlations between injuries and greater imbalances with certain runners. For many runners, ground contact time balance tends to deviate further from 50–50 when running up or down hills. Most running coaches agree that a symmetrical running form is good. Elite runners tend to have quick and balanced strides.

You can watch the color gauge or data field during your run or view the summary on your Garmin Connect account after your run. As with the other running dynamics data, ground contact time balance is a quantitative measurement to help you learn about your running form.

Vertical Oscillation and Vertical Ratio Data
The data ranges for vertical oscillation and vertical ratio are slightly different depending on the sensor and whether it is positioned at the chest (HRM-Tri or HRM-Run accessories) or at the waist (Running Dynamics Pod accessory).

<table>

Tips for Missing Running Dynamics Data
If running dynamics data does not appear, you can try these tips.
• Make sure you have a running dynamics accessory, such as the HRM-Run accessory.
  Accessories with running dynamics have ⚪ on the front of the module.
• Pair the running dynamics accessory with your Descent device again, according to the instructions.
• If the running dynamics data display shows only zeros, make sure the accessory is worn right-side up.

NOTE: Ground contact time and balance appears only while running. It is not calculated while walking.

Performance Measurements
These performance measurements are estimates that can help you track and understand your training activities and race performances. The measurements require a few activities using...
wrist-based heart rate or a compatible chest heart rate monitor. Cycling performance measurements require a heart rate monitor and a power meter.

These estimates are provided and supported by Firstbeat. For more information, go to www.garmin.com/physio.

NOTE: The estimates may seem inaccurate at first. The device requires you to complete a few activities to learn about your performance.

Training status: Training status shows you how your training affects your fitness and performance. Your training status is based on changes to your training load and VO2 max. over an extended time period.

VO2 max.: VO2 max. is the maximum volume of oxygen (in milliliters) you can consume per minute per kilogram of body weight at your maximum performance.

Recovery time: The recovery time displays how much time remains before you are fully recovered and ready for the next hard workout.

Training load: Training load is the sum of your excess post-exercise oxygen consumption (EPOC) over the last 7 days. EPOC is an estimate of how much energy it takes for your body to recover after exercise.

Predicted race times: Your device uses the VO2 max. estimate and published data sources to provide a target race time based on your current state of fitness. This projection also presumes you have completed the proper training for the race.

HRV stress test: The HRV (heart rate variability) stress test requires a Garmin chest heart rate monitor. The device records your heart rate variability while standing still for 3 minutes. It provides your overall stress level. The scale is 1 to 100, and a lower score indicates a lower stress level.

Performance condition: Your performance condition is a real-time assessment after 6 to 20 minutes of activity. It can be added as a data field so you can view your performance condition during the rest of your activity. It compares your real-time condition to your average fitness level.

Functional threshold power (FTP): The device uses your user profile information from the initial setup to estimate your FTP. For a more accurate rating, you can conduct a guided test.

Lactate threshold: Lactate threshold requires a chest heart rate monitor. Lactate threshold is the point where your muscles start to rapidly fatigue. Your device measures your lactate threshold level using heart rate data and pace.

Turning Off Performance Notifications

Performance notifications are turned on by default. Some performance notifications are alerts that appear upon completion of your activity. Some performance notifications appear during an activity or when you achieve a new performance measurement, such as a new VO2 max. estimate.

1 Hold MENU.
2 Select Settings > Physiological Metrics > Performance Notifications.
3 Select an option.

Detecting Performance Measurements Automatically

The Auto Detection feature is turned on by default. The device can automatically detect your maximum heart rate, and lactate threshold during an activity. When paired with a compatible power meter, the device can automatically detect your functional threshold power (FTP) during an activity.

NOTE: The device detects a maximum heart rate only when your heart rate is higher than the value set in your user profile.

1 Hold MENU.
2 Select Settings > Physiological Metrics > TrueUp.

Syncing Activities and Performance Measurements

You can sync activities and performance measurements from other Garmin devices to your Descent Mk1 device using your Garmin Connect account. This allows your device to more accurately reflect your training status and fitness. For example, you can record a ride with an Edge device, and view your activity details and overall training load on your Descent Mk1 device.

Training Status

Training status shows you how your training affects your fitness level and performance. Your training status is based on changes to your training load and VO2 max. over an extended time period. You can use your training status to help plan future training and continue improving your fitness level.

Peaking: Peaking means that you are in ideal race condition. Your recently reduced training load is allowing your body to recover and fully compensate for earlier training. You should plan ahead, since this peak state can only be maintained for a short time.

Productive: Your current training load is moving your fitness level and performance in the right direction. You should plan recovery periods into your training to maintain your fitness level.

Maintaining: Your current training load is enough to maintain your fitness level. To see improvement, try adding more variety to your workouts or increasing your training volume.

Recovery: Your lighter training load is allowing your body to recover, which is essential during extended periods of hard training. You can return to a higher training load when you feel ready.

Unproductive: Your training load is at a good level, but your fitness is decreasing. Your body may be struggling to recover, so you should pay attention to your overall health including stress, nutrition, and rest.

Detraining: Deterioration occurs when you are training much less than usual for a week or more, and it is affecting your fitness level. You can try increasing your training load to see improvement.

Overreaching: Your training load is very high and counterproductive. Your body needs a rest. You should give yourself time to recover by adding lighter training to your schedule.

No Status: The device needs one or two weeks of training history, including activities with VO2 max. results from running or cycling, to determine your training status.

Tips for Getting Your Training Status

The training status feature depends on updated assessments of your fitness level, including at least two VO2 max. measurements per week. Your VO2 max. estimate is updated.
after outdoor runs or rides during which your heart rate reached at least 70% of your maximum heart rate for several minutes. The trail run and indoor run activities do not generate a VO2 max. estimate in order to preserve the accuracy of your fitness level trend.

To get the most out of the training status feature, you can try these tips.

• At least two times per week, run or ride outdoors with a power meter, and reach a heart rate higher than 70% of your maximum heart rate for at least 10 minutes. After using the device for one week, your training status should be available.

• Record all of your fitness activities on this device, or enable the Physio TrueUp™ feature, allowing your device to learn about your performance (Syncing Activities and Performance Measurements, page 15).

Getting Your VO2 Max. Estimate for Running
This feature requires a power meter and wrist-based heart rate or a compatible chest heart rate monitor. The power meter must be paired with your Descent Mk1 device (Pairing Your Wireless Sensors, page 32). If you are using a chest heart rate monitor, you must put it on and pair it with your device. If your Descent Mk1 device was packaged with a heart rate monitor, the devices are already paired.

For the most accurate estimate, complete the user profile setup (Setting Up Your User Profile, page 18) and set your maximum heart rate (Setting Your Heart Rate Zones, page 18). The estimate may seem inaccurate at first. The device requires a few rides to learn about your cycling performance.

1. Run for at least 10 minutes outdoors.
2. After your run, select Save.
3. Select UP or DOWN to view the performance widget.
4. Select ▲ to scroll through the performance measurements.

About VO2 Max. Estimates
VO2 max. is the maximum volume of oxygen (in milliliters) you can consume per minute per kilogram of body weight at your maximum performance. In simple terms, VO2 max. is an indication of athletic performance and should increase as your level of fitness improves. The Descent Mk1 device requires wrist-based heart rate or a compatible chest heart rate monitor to display your VO2 max. estimate. The device has separate VO2 max. estimates for running and cycling. You must run either outside with GPS or ride with a compatible power meter at a moderate level of intensity for several minutes to get an accurate VO2 max. estimate.

On the device, your VO2 max. estimate appears as a number, description, and position on the color gauge. On your Garmin Connect account, you can view additional details about your VO2 max. estimate, including your fitness age. Your fitness age gives you an idea of how your fitness compares with a person of the same gender and different age. As you exercise, your fitness age can decrease over time.

VO2 max. data is provided by FirstBeat. VO2 max. analysis is provided with permission from The Cooper Institute®. For more information, see the appendix (VO2 Max. Standard Ratings, page 39), and go to www.CooperInstitute.org.

Getting Your VO2 Max. Estimate for Cycling
This feature requires a power meter and wrist-based heart rate or a compatible chest heart rate monitor to display how much time remains before you are fully recovered and ready for the next hard workout.

NOTE: The recovery time recommendation uses your VO2 max. estimate and may seem inaccurate at first. The device requires you to complete a few activities to learn about your performance.

The recovery time appears immediately following an activity. The time counts down until it is optimal for you to attempt another hard workout.

Viewing Your Recovery Time
For the most accurate estimate, complete the user profile setup (Setting Up Your User Profile, page 18), and set your maximum heart rate (Setting Your Heart Rate Zones, page 18).

1. Go for a run.
2. After your run, select Save.
   The recovery time appears. The maximum time is 4 days.

   NOTE: From the watch face, you can select UP or DOWN to view the performance widget, and select ▲ to scroll through the performance measurements to view your recovery time.

Recovery Heart Rate
If you are training with wrist-based heart rate or a compatible chest heart rate monitor, you can check your recovery heart rate value after each activity. Recovery heart rate is the difference between your exercising heart rate and your heart rate two minutes after the exercise has stopped. For example, after a typical training run, you stop the timer. Your heart rate is 140 bpm. After two minutes of no activity or cool down, your heart rate is 90 bpm. Your recovery heart rate is 50 bpm (140 minus 90). Some studies have linked recovery heart rate to cardiac health. Higher numbers generally indicate healthier hearts.

TIP: For best results, you should stop moving for two minutes while the device calculates your recovery heart rate value. You can save or discard the activity after this value appears.

Training Load
Training load is a measurement of your training volume over the last seven days. It is the sum of your excess post-exercise oxygen consumption (EPOC) measurements for the last seven days. The gauge indicates whether your current load is low,
Viewing Your Predicted Race Times

For the most accurate estimate, complete the user profile setup (Setting Up Your User Profile, page 18), and set your maximum heart rate (Setting Your Heart Rate Zones, page 18). Your device uses the VO2 max. estimate (About VO2 Max. Estimates, page 16) and published data sources to provide a target race time based on your current state of fitness. This projection also presumes you have completed the proper training for the race.

**NOTE:** The projections may seem inaccurate at first. The device requires a few runs to learn about your running performance.

1. Select **UP** or **DOWN** to view the performance widget.
2. Select **a** to scroll through the performance measurements.

Your projected race times appear for 5K, 10K, half marathon, and marathon distances.

About Training Effect

Training Effect measures the impact of an activity on your aerobic and anaerobic fitness. Training Effect accumulates during the activity. As the activity progresses, the Training Effect value increases, telling you how the activity has improved your fitness. Training Effect is determined by your user profile information, heart rate, duration, and intensity of your activity. Aerobic Training Effect uses your heart rate to measure how the accumulated intensity of an exercise affects your aerobic fitness and indicates if the workout had a maintaining or improving effect on your fitness level. Your EPOC accumulated during exercise is mapped to a range of values that account for your fitness level and training habits. Steady workouts at moderate effort or workouts involving longer intervals (>180 sec) have a positive impact on your aerobic metabolism and result in an improved aerobic Training Effect.

Anaerobic Training Effect uses heart rate and speed (or power) to determine how a workout affects your ability to perform at very high intensity. You receive a value based on the anaerobic contribution to EPOC and the type of activity. Repeated high-intensity intervals of 10 to 120 seconds have a highly beneficial impact on your anaerobic capability and result in an improved anaerobic Training Effect.

It is important to know that your Training Effect numbers (from 0.0 to 5.0) may seem abnormally high during your first few activities. It takes several activities for the device to learn your aerobic and anaerobic fitness.

You can add Training Effect as a data field to one of your training screens to monitor your numbers throughout the activity.

Heart Rate Variability and Stress Level

Stress level is the result of a three-minute test performed while standing still, where the Descent device analyzes heart rate variability to determine your overall stress. Training, sleep, nutrition, and general life stress all impact how a runner performs. The stress level range is from 1 to 100, where 1 is a very low stress state and 100 is a very high stress state. Knowing your stress level can help you decide if your body is ready for a tough training run or yoga.

**Viewing Your Heart Rate Variability and Stress Level**

This feature requires a Garmin chest heart rate monitor. Before you can view your heart rate variability (HRV) stress level, you must put on a heart rate monitor and pair it with your device (Pairing Your Wireless Sensors, page 32). If your Descent Mk1 device was packaged with a heart rate monitor, the devices are already paired.

**TIP:** Garmin recommends that you measure your stress level at approximately the same time and under the same conditions every day.

1. If necessary, select **a** > **Add** > **HRV Stress** to add the stress app to the apps list.
2. Select **Yes** to add the app to your list of favorites.
3. From the watch face, select **a** > **HRV Stress** > **a**.
4. Stand still, and rest for 3 minutes.

Performance Condition

As you complete your activity, such as running or cycling, the performance condition feature analyzes your pace, heart rate, and heart rate variability to make a real-time assessment of your ability to perform compared to your average fitness level. It is approximately your real-time percentage deviation from your baseline VO2 max. estimate.

Performance condition values range from -20 to +20. After the first 6 to 20 minutes of your activity, the device displays your performance condition score. For example, a score of +5 means that you are rested, fresh, and capable of a good run or ride. You can add performance condition as a data field to one of your training screens to monitor your ability throughout the activity. Performance condition can also be an indicator of fatigue level, especially at the end of a long training run or ride.

**NOTE:** The device requires a few runs or rides with a heart rate monitor to get an accurate VO2 max. estimate and learn about your running or riding ability (About VO2 Max. Estimates, page 16).

Viewing Your Performance Condition

This feature requires wrist-based heart rate or a compatible chest heart rate monitor.

1. Add Perform. Cond. to a data screen (Customizing the Data Screens, page 26).
2. Go for a run or ride.
3. Scroll to the data screen to view your performance condition throughout the run or ride.

Lactate Threshold

Lactate threshold is the exercise intensity at which lactic acid starts to accumulate in the bloodstream. In running, it is the estimated level of effort or pace. When a runner exceeds the threshold, fatigue starts to increase at an accelerating rate. For experienced runners, the threshold occurs at approximately 90% of their maximum heart rate and between 10k and half-marathon race pace. For average runners, the lactate threshold often occurs well below 90% of maximum heart rate. Knowing your...
lactate threshold can help you determine how hard to train or
when to push yourself during a race.

If you already know your lactate threshold heart rate value, you
can enter it in your user profile settings (Setting Your Heart Rate Zones, page 18).

Performing a Guided Test to Determine Your Lactate Threshold
This feature requires a Garmin chest heart rate monitor. Before
you can perform the guided test, you must put on a heart rate
monitor and pair it with your device (Pairing Your Wireless Sensors, page 32).

The device uses your user profile information from the initial
setup and your VO2 max. estimate to estimate your lactate
threshold. The device will automatically detect your lactate
threshold during runs at a steady, high intensity with heart rate.

TIP: The device requires a few runs with a chest heart rate
monitor to get an accurate maximum heart rate value and VO2 max. estimate. If you are having trouble getting a lactate
threshold estimate, try manually lowering your maximum heart
rate value.

1. From the watch face, select 🔄.
2. Select an outdoor running activity.
   - GPS is required to complete the test.
3. Hold MENU.
4. Select Training > Lactate Threshold Guided Test.
5. Start the timer, and follow the on-screen instructions.
   - After you begin your run, the device displays each step
duration, the target, and current heart rate data. A message
appears when the test is complete.
6. After you complete the guided test, stop the timer and save
   the activity.
   - If this is your first lactate threshold estimate, the device
prompts you to update your heart rate zones based on your
lactate threshold heart rate. For each additional lactate
threshold estimate, the device prompts you to accept or
delay the estimate.

Getting Your FTP Estimate
Before you can get your functional threshold power (FTP)
estimate, you must pair a chest heart rate monitor and power
meter with your device (Pairing Your Wireless Sensors, page 32), and you must get your VO2 max. estimate (Getting Your VO2 Max. Estimate for Cycling, page 16).

The device uses your user profile information from the initial
setup and your VO2 max. estimate to estimate your FTP. The
device will automatically detect your FTP during rides at a
steady, high intensity with heart rate and power.

1. Select UP or DOWN to view the performance widget.
2. Select 🔄 to scroll through the performance measurements.
   - Your FTP estimate appears as a value measured in watts per
kilogram, your power output in watts, and a position on the
color gauge.

   - Purple: Superior
   - Blue: Excellent
   - Green: Good
   - Orange: Fair
   - Red: Untrained

For more information, see the appendix (FTP Ratings, page 40).

NOTE: When a performance notification alerts you to a new
FTP, you can select Accept to save the new FTP, or Decline
to keep your current FTP (Turning Off Performance Notifications, page 15).

Conducting an FTP Test
Before you can conduct a test to determine your functional
threshold power (FTP), you must pair a chest heart rate monitor
and a power meter with your device (Pairing Your Wireless Sensors, page 32), and you must get your VO2 max. estimate (Getting Your VO2 Max. Estimate for Cycling, page 16).

NOTE: The FTP test is a challenging workout that takes about
30 minutes to complete. Choose a practical and mostly flat route
that allows you to ride at a steadily increasing effort, similar to a
time trial.

1. From the watch face, select 🔄.
2. Select a cycling activity.
3. Hold MENU.
4. Select Training > FTP Guided Test.
5. Follow the on-screen instructions.
   - After you begin your ride, the device displays each step
duration, the target, and current power data. A message
appears when the test is complete.
6. After you complete the guided test, complete the cool down,
stop the timer, and save the activity.
   - Your FTP appears as a value measured in watts per
kilogram, your power output in watts, and a position on the
color gauge.
7. Select an option:
   • Select Accept to save the new FTP.
   • Select Decline to keep your current FTP.

Training

Setting Up Your User Profile
You can update your gender, birth year, height, weight, heart
rate zone, and power zone settings. The device uses this
information to calculate accurate training data.

1. Hold MENU.
2. Select Settings > User Profile.
3. Select an option.

Fitness Goals
Knowing your heart rate zones can help you measure and
improve your fitness by understanding and applying these
principles.

• Your heart rate is a good measure of exercise intensity.
• Training in certain heart rate zones can help you improve
cardiovascular capacity and strength.

If you know your maximum heart rate, you can use the table
(Heart Rate Zone Calculations, page 19) to determine the best
heart rate zone for your fitness objectives.

If you do not know your maximum heart rate, use one of the
calculators available on the Internet. Some gyms and health
centers can provide a test that measures maximum heart rate.
The default maximum heart rate is 220 minus your age.

About Heart Rate Zones
Many athletes use heart rate zones to measure and increase
their cardiovascular strength and improve their level of fitness. A
heart rate zone is a set range of heartbeats per minute. The five
commonly accepted heart rate zones are numbered from 1 to 5
according to increasing intensity. Generally, heart rate zones are
calculated based on percentages of your maximum heart rate.

Setting Your Heart Rate Zones
The device uses your user profile information from the initial
setup to determine your default heart rate zones. You can set
separate heart rate zones for sport profiles, such as running,
cycling, and swimming. For the most accurate calorie data
during your activity, set your maximum heart rate. You can also set each heart rate zone and enter your resting heart rate manually. You can manually adjust your zones on the device or using your Garmin Connect account.

1 Hold MENU.
2 Select Settings > User Profile > Heart Rate.
3 Select Max. HR, and enter your maximum heart rate.
   You can use the Auto Detection feature to automatically record your maximum heart rate during an activity (Detecting Performance Measurements Automatically, page 15).
4 Select LTHR > Enter Manually, and enter your lactate threshold heart rate.
   You can perform a guided test to estimate your lactate threshold (Lactate Threshold, page 17). You can use the Auto Detection feature to automatically record your lactate threshold during an activity (Detecting Performance Measurements Automatically, page 15).
5 Select Resting HR, and enter your resting heart rate.
   You can use the average resting heart rate measured by your device, or you can set a custom resting heart rate.
6 Select Zones > Based On.
7 Select an option:
   • Select BPM to view and edit the zones in beats per minute.
   • Select %Max. HR to view and edit the zones as a percentage of your maximum heart rate.
   • Select %HRR to view and edit the zones as a percentage of your heart rate reserve (maximum heart rate minus resting heart rate).
   • Select %LTHR to view and edit the zones as a percentage of your lactate threshold heart rate.
8 Select a zone, and enter a value for each zone.
9 Select Add Sport Heart Rate, and select a sport profile to add separate heart rate zones (optional).
10 Repeat steps 3 through 8 to add sport heart rate zones (optional).

Letting the Device Set Your Heart Rate Zones
The default settings allow the device to detect your maximum heart rate and set your heart rate zones as a percentage of your maximum heart rate.
• Verify that your user profile settings are accurate (Setting Up Your User Profile, page 18).
• Run often with the wrist or chest heart rate monitor.
• Try a few heart rate training plans, available from your Garmin Connect account.
• View your heart rate trends and time in zones using your Garmin Connect account.

Heart Rate Zone Calculations

<table>
<thead>
<tr>
<th>Zone % of Maximum Heart Rate</th>
<th>Perceived Exertion</th>
<th>Benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 50–60%</td>
<td>Relaxed, easy pace, rhythmic breathing</td>
<td>Beginning-level aerobic training, reduces stress</td>
</tr>
<tr>
<td>2 60–70%</td>
<td>Comfortable pace, slightly deeper breathing, conversation possible</td>
<td>Basic cardiovascular training, good recovery pace</td>
</tr>
<tr>
<td>3 70–80%</td>
<td>Moderate pace, more difficult to hold conversation</td>
<td>Improved aerobic capacity, optimal cardiovascular training</td>
</tr>
</tbody>
</table>

Setting Your Power Zones
The values for the zones are default values based on gender, weight, and average ability, and may not match your personal abilities. If you know your functional threshold power (FTP) value, you can enter it and allow the software to calculate your power zones automatically. You can manually adjust your zones on the device or using your Garmin Connect account.
1 Hold MENU.
2 Select Settings > User Profile > Power Zones > Based On.
3 Select an option:
   • Select Watts to view and edit the zones in watts.
   • Select % FTP to view and edit the zones as a percentage of your functional threshold power.
4 Select FTP, and enter your FTP value.
5 Select a zone, and enter a value for each zone.
6 If necessary, select Minimum, and enter a minimum power value.

Activity Tracking
The activity tracking feature records your daily step count, distance traveled, intensity minutes, floors climbed, calories burned, and sleep statistics for each recorded day. Your calories burned includes your base metabolism plus activity calories. The number of steps taken during the day appears on the steps widget. The step count is updated periodically. For more information about activity tracking and fitness metric accuracy, go to garmin.com/ataccuracy.

Auto Goal
Your device creates a daily step goal automatically, based on your previous activity levels. As you move during the day, the device shows your progress toward your daily goal 🍂.

If you choose not to use the auto goal feature, you can set a personalized step goal on your Garmin Connect account.

Using the Move Alert
Sitting for prolonged periods of time can trigger undesirable metabolic state changes. The move alert reminds you to keep moving. After one hour of inactivity, Move! and the red bar appear. Additional segments appear after every 15 minutes of inactivity. The device also beeps or vibrates if audible tones are turned on (System Settings, page 31).
   Go for a short walk (at least a couple of minutes) to reset the move alert.
Sleep Tracking
While you are sleeping, the device automatically detects your sleep and monitors your movement during your normal sleep hours. You can set your normal sleep hours in the user settings on your Garmin Connect account. Sleep statistics include total hours of sleep, sleep levels, and sleep movement. You can view your sleep statistics on your Garmin Connect account.
NOTE: Naps are not added to your sleep statistics. You can use do not disturb mode to turn off notifications and alerts, with the exception of alarms (Using Do Not Disturb Mode, page 20).

Using Automated Sleep Tracking
1. Wear your device while sleeping.
2. Upload your sleep tracking data to the Garmin Connect site (Manually Syncing Data with Garmin Connect Mobile, page 11).
   You can view your sleep statistics on your Garmin Connect account.

Using Do Not Disturb Mode
You can use do not disturb mode to turn off the backlight, tone alerts, and vibration alerts. For example, you can use this mode while sleeping or watching a movie.
NOTE: You can set your normal sleep hours in the user settings on your Garmin Connect account. You can enable the Sleep Time option in the system settings to automatically enter do not disturb mode during your normal sleep hours (System Settings, page 31).
1. Hold LIGHT.
2. Select Off.

Intensity Minutes
To improve your health, organizations such as the U.S. Centers for Disease Control and Prevention, the American Heart Association, and the World Health Organization, recommend at least 150 minutes per week of moderate intensity activity, such as brisk walking, or 75 minutes per week of vigorous intensity activity, such as running.
The device monitors your activity intensity and tracks your time spent participating in moderate to vigorous intensity activities (heart rate data is required to quantify vigorous intensity). You can work toward achieving your weekly intensity minutes goal by participating in at least 10 consecutive minutes of moderate to vigorous intensity activities. The device adds the amount of moderate activity minutes with the amount of vigorous activity minutes. Your total vigorous intensity minutes are doubled when added.

Earning Intensity Minutes
Your Descent Mk1 device calculates intensity minutes by comparing your heart rate data to your average resting heart rate. If heart rate is turned off, the device calculates moderate intensity minutes by analyzing your steps per minute.
• Start a timed activity for the most accurate calculation of intensity minutes.
• Exercise for at least 10 consecutive minutes at a moderate or vigorous intensity level.
• Wear your device all day and night for the most accurate resting heart rate.

Garmin Move IQ™
When your movements match familiar exercise patterns, the Move IQ feature automatically detects the event and displays it in your timeline. The Move IQ events show activity type and duration, but they do not appear in your activities list or newsfeed.
The Move IQ feature can automatically start a timed activity for walking and running using time thresholds you set in the Garmin Connect Mobile app. These activities are added to your activities list.

Activity Tracking Settings
Hold MENU, and select Settings > Activity Tracking.
Status: Turns off the activity tracking features.
Move Alert: Displays a message and the move bar on the digital watch face and steps screen.
Goal Alerts: Allows you to turn on and off goal alerts, or turn them off only during activities. Goal alerts appear for your daily steps goal, daily floors climbed goal, and weekly intensity minutes goal.

Turning Off Activity Tracking
When you turn off activity tracking, your steps, floors climbed, intensity minutes, sleep tracking, and Move IQ events are not recorded.
1. Hold MENU.
2. Select Settings > Activity Tracking > Status > Off.

Workouts
You can create custom workouts that include goals for each workout step and for varied distances, times, and calories. You can create workouts using Garmin Connect or select a training plan that has built-in workouts from Garmin Connect, and transfer them to your device.
You can schedule workouts using Garmin Connect. You can plan workouts in advance and store them on your device.

Following a Workout From the Web
Before you can download a workout from Garmin Connect, you must have a Garmin Connect account (Garmin Connect, page 10).
1. Connect the device to your computer.
3. Create and save a new workout.
4. Select Send to Device, and follow the on-screen instructions.
5. Disconnect the device.

Starting a Workout
Before you can start a workout, you must download a workout from your Garmin Connect account.
1. From the watch face, select ✉.
2. Select an activity.
3. Hold MENU.
4. Select Training > My Workouts.
5. Select a workout.
   NOTE: Only workouts that are compatible with the selected activity appear in the list.
7. Select ✉ to start the timer.
After you begin a workout, the device displays each step of the workout, step notes (optional), the target (optional), and the current workout data.

About the Training Calendar
The training calendar on your device is an extension of the training calendar or schedule you set up in Garmin Connect. After you have added a few workouts to the Garmin Connect calendar, you can send them to your device. All scheduled workouts sent to the device appear in the training calendar list by date. When you select a day in the training calendar, you can view or do the workout. The scheduled workout stays on your device whether you complete it or skip it. When you send scheduled workouts from Garmin Connect, they overwrite the existing training calendar.
Using Garmin Connect Training Plans
Before you can download and use a training plan from Garmin Connect, you must have a Garmin Connect account (Garmin Connect, page 10), and you must pair the Descent device with a compatible smartphone.
1 From the Garmin Connect Mobile app, select Training > Training Plans > Find a Plan.
2 Select and schedule a training plan.
3 Review the training plan in your calendar.

Adaptive Training Plans
Your Garmin Connect account has an adaptive training plan and Garmin coach to fit your training goals. For example, you can answer a few questions and find a plan to help you complete a 5 km race. The plan adjusts to your current level of fitness, coaching and schedule preferences, and race date. When you start a plan, the Garmin Coach widget is added to the widget loop on your Descent device.

Interval Workouts
You can create interval workouts based on distance or time. The device saves your custom interval workout until you create another interval workout. You can use open intervals for track workouts and when you are running a known distance.

Creating an Interval Workout
1 From the watch face, select ▲.
2 Select an activity.
3 Hold MENU.
4 Select Training > Intervals > Edit > Interval > Type.
5 Select Distance, Time, or Open.
   TIP: You can create an open-ended interval by selecting the Open option.
6 Select Duration, enter a distance or time interval value for the workout, and select ✓.
7 Select BACK.
8 Select Rest > Type.
9 Select Distance, Time, or Open.
10 If necessary, enter a distance or time value for the rest interval, and select ✓.
11 Select BACK.
12 Select one or more options:
   • To set the number of repetitions, select Repeat.
   • To add an open-ended warm up to your workout, select Warm Up > On.
   • To add an open-ended cool down to your workout, select Cool Down > On.

Starting an Interval Workout
1 From the watch face, select ▲.
2 Select an activity.
3 Hold MENU.
4 Select Training > Intervals > Do Workout.
5 Select ▲ to start the timer.
6 When your interval workout has a warm up, select BACK to begin the first interval.
7 Follow the on-screen instructions.
After you complete all of the intervals, a message appears.

Stopping an Interval Workout
• At any time, select BACK to stop the current interval or rest period and transition to the next interval or rest period.
• After all intervals and rest periods are complete, select BACK to end the interval workout and transition to a timer that can be used for cool down.
• At any time, select ▲ to stop the timer. You can resume the timer or end the interval workout.

Segments
You can send running or cycling segments from your Garmin Connect account to your device. After a segment is saved to your device, you can race a segment, trying to match or exceed your personal record or other participants who have raced the segment.
NOTE: When you download a course from your Garmin Connect account, you can download all of the available segments in the course.

Strava™ Segments
You can download Strava segments to your Descent Mk1 device. Follow Strava segments to compare your performance with your past rides, friends, and pros who have ridden the same segment.
To sign up for a Strava membership, go to the segments widget in your Garmin Connect account. For more information, go to www.strava.com.
The information in this manual applies to both Garmin Connect segments and Strava segments.

Viewing Segment Details
1 Select ▲.
2 Select an activity.
3 Hold MENU.
4 Select Training > Segments.
5 Select a segment.
6 Select an option:
   • Select Race Time to view the time and average speed or pace for the segment leader.
   • Select Map to view the segment on the map.
   • Select Elevation Plot to view an elevation plot of the segment.

Racing a Segment
Segments are virtual race courses. You can race a segment, and compare your performance to past activities, others’ performance, connections in your Garmin Connect account, or other members of the running or cycling communities. You can upload your activity data to your Garmin Connect account to view your segment position.
NOTE: If your Garmin Connect account and Strava account are linked, your activity is automatically sent to your Strava account so you can review the segment position.
1 Select ▲.
2 Select an activity.
3 Go for a run or ride.
   When you approach a segment, a message appears, and you can race the segment.
4 Start racing the segment.
A message appears when the segment is complete.

Using Virtual Partner®
Your Virtual Partner is a training tool designed to help you meet your goals. You can set a pace for the Virtual Partner and race against it.
NOTE: This feature is not available for all activities.
1 Hold MENU.
2 Select Settings > Activities & Apps.
Setting a Training Target
The training target feature works with the Virtual Partner feature so you can train toward a set distance, distance and time, distance and pace, or distance and speed goal. During your training activity, the device gives you real-time feedback about how close you are to achieving your training target.
1. From the watch face, select 🅰️.
2. Select an activity.
3. Hold MENU.
4. Select Training > Set a Target.
5. Select an option:
   - Select Distance Only to select a preset distance or enter a custom distance.
   - Select Distance and Time to select a distance and time target.
   - Select Distance and Pace or Distance and Speed to select a distance and pace or speed target.
The training target screen appears and displays your estimated finish time. The estimated finish time is based on your current performance and the time remaining.
6. Select ⬆️ to start the timer.

Cancelling a Training Target
1. During an activity, hold MENU.
2. Select Cancel Target > Yes.

Racing a Previous Activity
You can race a previously recorded or downloaded activity. This feature works with the Virtual Partner feature so you can see how far ahead or behind you are during the activity.
NOTE: This feature is not available for all activities.
1. From the watch face, select 🅰️.
2. Select an activity.
3. Hold MENU.
4. Select Training > Race an Activity.
5. Select an option:
   - Select From History to select a previously recorded activity from your device.
   - Select Downloaded to select an activity you downloaded from your Garmin Connect account.
6. Select the activity.
The Virtual Partner screen appears indicating your estimated finish time.
7. Select ⬆️ to start the timer.
8. After you complete your activity, select ⬆️ > Save.

Personal Records
When you complete an activity, the device displays any new personal records you achieved during that activity. Personal records include your fastest time over several typical race distances and longest run or ride.
NOTE: For cycling, personal records also include most ascent and best power (power meter required).

Viewing Your Personal Records
1. Hold MENU.
2. Select History > Records.
3. Select a sport.
4. Select a record.
5. Select View Record.

Restoring a Personal Record
You can set each personal record back to the one previously recorded.
1. Hold MENU.
2. Select History > Records.
3. Select a sport.
4. Select a record to restore.
5. Select Previous > Yes.
   NOTE: This does not delete any saved activities.

Clearing a Personal Record
1. Hold MENU.
2. Select History > Records.
3. Select a sport.
4. Select a record to delete.
5. Select Clear Record > Yes.
   NOTE: This does not delete any saved activities.

Clearing All Personal Records
1. Hold MENU.
2. Select History > Records.
3. Select a sport.
4. Select Clear All Records > Yes.
The records are deleted for that sport only.

Clock

Setting an Alarm
You can set up to ten separate alarms. You can set each alarm to sound once or to repeat regularly.
1. From the watch face, hold MENU.
2. Select Clock > Alarm Clock > Add Alarm.
3. Select Time, and enter the alarm time.
4. Select Repeat, and select when the alarm should repeat (optional).
5. Select Sounds, and select a type of notification (optional).
6. Select Backlight > On to turn on the backlight with the alarm.
7. Select Label, and select a description for the alarm (optional).

Deleting an Alarm
1. From the watch face, hold MENU.
2. Select Clock > Alarm Clock.
3. Select an alarm.
4. Select Delete.

Starting the Countdown Timer
1. From the watch face, hold MENU.
2. Select Clock > Timer.
3. Enter the time.
4. If necessary, select Restart > On to automatically restart the timer after it expires.
Using the Stopwatch

1. From the watch face, hold MENU.
2. Select Clock > Stopwatch.
3. Select ▲ to start the timer.
4. Select BACK to restart the lap timer.

The total stopwatch time continues running.

5. Select ▲ to stop both timers.
6. Select an option.

Setting Clock Alerts

1. From the watch face, hold MENU.
2. Select Clock > Alerts.
3. Select an option:
   - To set an alert to sound a specific number of minutes or hours before the actual sunset occurs, select Til Sunset > Status > On, select Time, and enter the time.
   - To set an alert to sound a specific number of minutes or hours before the actual sunrise occurs, select Til Sunrise > Status > On, select Time, and enter the time.
   - To set an alert to sound every hour, select Hourly > On.

Syncing the Time with GPS

Each time you turn on the device and acquire satellites, the device automatically detects your time zones and the current time of day. You can also manually sync the time with GPS when you change time zones, and to update for daylight saving time.

1. From the watch face, hold MENU.
2. Select Clock > Sync With GPS.
3. Wait while the device locates satellites (Acquiring Satellite Signals, page 35).

Navigation

Saving Your Location

You can save your current location to navigate back to it later.

1. Hold LIGHT.
2. Select ✔.
3. Follow the on-screen instructions.

Editing Your Saved Locations

You can delete a saved location or edit its name, elevation, and position information.

1. From the watch face, select ▲ > Navigate > Saved Locations.
2. Select a saved location.
3. Select an option to edit the location.

Navigating to a Point of Interest

If the map data installed on your device includes points of interest, you can navigate to them.

1. From the watch face, select ▲.
2. Select an activity.
3. Hold MENU.
4. Select Navigation > Points of Interest, and select a category.
   - A list of points of interest near your current location appears.
5. If necessary, select an option:
   - To search near a different location, select Search Near, and select a location.
   - To search for a point of interest by name, select Spell Search, enter a name, select Search Near, and select a location.
6. Select a point of interest from the search results.
7. Select Go.
   - Navigation information appears.
8. Select ▲ to begin navigation.

Points of Interest

A point of interest is a place that you may find useful or interesting. Points of interest are organized by category and can include popular travel destinations such as gas stations, restaurants, hotels, and entertainment venues.

Creating and Following a Course on Your Device

1. From the watch face, select ▲ > Navigate > Courses > Create New.
2. Enter a name for the course, and select ✔.
3. Select Add Location.
4. Select an option.
5. If necessary, repeat steps 3 and 4.
6. Select Done > Do Course.
   - Navigation information appears.
7 Select ▲ to begin navigation.

Creating a Round-Trip Course
The device can create a round-trip course based on a specified distance and direction of navigation.
1 From the watch face, select ▲.
2 Select Run or Bike.
3 Hold MENU.
4 Select Navigation > Round-Trip Course.
5 Enter the total distance for the course.
6 Select a direction heading.
   The device creates up to three courses. You can select DOWN to view the courses.
7 Select ▲ to select a course.
8 Select an option:
   • To begin navigation, select Go.
   • To view the course on the map and pan or zoom the map, select Map.
   • To view a list of turns in the course, select Turn By Turn.
   • To view an elevation plot of the course, select Elevation Plot.

Marking and Starting Navigation to a Man Overboard Location
You can save a man overboard (MOB) location, and automatically start navigation back to it.
TIP: You can customize the hold function of the keys to access the MOB function (Customizing the Hot Keys, page 32).
   From the watch face, select ▲ > Navigate > Last MOB. Navigation information appears.

Navigating with Sight 'N Go
You can point the device at an object in the distance, such as a water tower, lock in the direction, and then navigate to the object.
1 From the watch face, select ▲ > Navigate > Sight 'N Go.
2 Point the top of the watch at an object, and select ▲. Navigation information appears.
3 Select ▲ to begin navigation.

Navigating to Your Starting Point During an Activity
You can navigate back to the starting point of your current activity in a straight line or along the path you traveled. This feature is available only for activities that use GPS.
1 During an activity, select ▲ > Back to Start.
2 Select an option:
   • To navigate back to the starting point of your activity along the path you traveled, select TracBack.
   • If you do not have a supported map or are using direct routing, select Route to navigate back to the starting point of your activity in a straight line.
   • If you are not using direct routing, select Route to navigate back to the starting point of your activity using turn-by-turn directions.

Navigating to the Starting Point of Your Last Saved Activity
You can navigate back to the starting point of your last saved activity in a straight line or along the path you traveled. This feature is available only for activities that use GPS.
1 Select ▲ > Navigate > Back to Start > Route.
   Turn-by-turn directions help you navigate to the starting point of your last saved activity if you have a supported map or are using direct routing. A line appears on the map from your current location to the starting point of the last saved activity if you are not using direct routing.
   NOTE: You can start the timer to prevent the device from timing out to watch mode.
2 Select DOWN to view the compass (optional). The arrow points toward your starting point.

Stopping Navigation
1 During an activity, hold MENU.
2 Select Stop Navigation.

Map
Your device comes preloaded with maps and can display several types of Garmin map data, including topographical contours and nearby points of interest. To purchase additional map data and view compatibility information, go to garmin.com/maps.
▲ represents your location on the map. When you are navigating to a destination, your route is marked with a line on the map.

Viewing the Map
1 From the watch face, select ▲ > Map.
2 Hold MENU, and select an option:
   • To pan or zoom the map, select Pan/Zoom.
     TIP: You can select ▲ to toggle between panning up and down, panning left and right, or zooming. You can hold ▲ to select the point indicated by the crosshairs.
   • To see nearby points of interest and waypoints, select Around Me.

Saving or Navigating to a Location on the Map
You can select any location on the map. You can save the location or start navigating to it.
1 From the map, hold MENU.
2 Select Pan/Zoom.
   Controls and crosshairs appear on the map.
Navigating with the Around Me Feature

You can use the around me feature to navigate to nearby points of interest and waypoints.

NOTE: The map data installed on your device must include points of interest to navigate to them.

Using History

History contains previous activities you have saved on your device.

1. Hold MENU.
2. Select History > Activities.
3. Select an activity.
4. Select an option:
   - To view additional information about the activity, select Details.
   - To select a lap and view additional information about each lap, select Laps.
   - To select an interval and view additional information about each interval, select Intervals.
   - To select an exercise set and view additional information about each set, select Sets.
   - To view the activity on a map, select Map.
   - To view the impact of the activity on your aerobic and anaerobic fitness, select Training Effect (About Training Effect, page 17).
   - To view your time in each heart rate zone, select Time in Zone (Viewing Your Time in Each Heart Rate Zone, page 25).
   - To view an elevation plot of the activity, select Elevation Plot.
   - To delete the selected activity, select Delete.

Using the Odometer

The odometer automatically records the total distance traveled, elevation gained, and time in activities.

1. Hold MENU.
2. Select History > Totals > Odometer.
3. Select UP or DOWN to view odometer totals.

Deleting History

1. Hold MENU.

History

History includes time, distance, calories, average pace or speed, lap data, and optional sensor information.

NOTE: When the device memory is full, your oldest data is overwritten.

Pan and zoom the map to center the location in the crosshairs.

Hold ▲ to select the point indicated by the crosshairs.

If necessary, select a nearby point of interest.

Select an option:
- To start navigating to the location, select Go.
- To save the location, select Save Location.
- To view information about the location, select Review.

Compass

The device has a 3-axis compass with automatic calibration. The compass features and appearance change depending on your activity, whether GPS is enabled, and whether you are navigating to a destination. You can change the compass settings manually (Compass Settings, page 30). To open the compass settings quickly, you can select ▲ from the compass widget.

Altimeter and Barometer

The device contains an internal altimeter and barometer. The device collects elevation and pressure data continuously, even in low-power mode. The altimeter displays your approximate elevation based on pressure changes. The barometer displays environmental pressure data based on the fixed elevation where the altimeter was most recently calibrated (Altimeter Settings, page 30). To open the altimeter or barometer settings quickly, select ▲ from the altimeter or barometer widgets.

Viewing Data Totals

You can view the accumulated distance and time data saved to your device.

1. Hold MENU.
2. Select History > Totals.
3. If necessary, select an activity.
4. Select an option to view weekly or monthly totals.
2 Select **History > Options**.
3 Select an option:
   • Select **Delete All Activities** to delete all activities from the history.
   • Select **Reset Totals** to reset all distance and time totals.
   **NOTE:** This does not delete any saved activities.
4 Confirm your selection.

## Customizing Your Device

### Activities and App Settings
These settings allow you to customize each preloaded activity app based on your needs. For example, you can customize data pages and enable alerts and training features. Not all settings are available for all activity types.

Hold **MENU**, select **Settings > Activities & Apps**, select an activity, and select the activity settings.

- **3D Distance**: Calculates your distance traveled using your elevation change and your horizontal movement over ground.
- **3D Speed**: Calculates your speed using your elevation change and your horizontal movement over ground (**3D Speed and Distance**, page 28).
- **Accent Color**: Sets the accent color of each activity to help identify which activity is active.
- **Alerts**: Sets the training or navigation alerts for the activity.
- **Auto Climb**: Enables the device to detect elevation changes automatically using the built-in altimeter.
- **Auto Lap**: Sets the options for the Auto Lap feature (**Auto Lap**, page 27).
- **Auto Pause**: Sets the device to stop recording data when you stop moving or when you drop below a specified speed (**Enabling Auto Pause**, page 28).
- **Auto Run**: Enables the device to detect ski runs automatically using the built-in accelerometer.
- **Auto Scroll**: Enables you to move through all of the activity data screens automatically while the timer is running (**Using Auto Scroll**, page 28).
- **Auto Set**: Enables the device to start and stop exercise sets automatically during a strength training activity.
- **Background Color**: Sets the background color of each activity to black or white.
- **Countdown Start**: Enables a countdown timer for pool swimming intervals.
- **Data Screens**: Enables you to customize data screens and add new data screens for the activity (**Customizing the Data Screens**, page 26).
- **GPS**: Sets the mode for the GPS antenna. Using the GPS + GLONASS option provides increased performance in challenging environments and faster position acquisition. Using the GPS + GLONASS option can reduce battery life more than using the GPS option only. Using the UltraTrac option records track points and sensor data less frequently (**UltraTrac**, page 28).
- **Lap Key**: Enables you to record a lap or a rest during the activity.
- **Lock Keys**: Locks the keys during multisport activities to prevent accidental key presses.
- **Map**: Sets the display preferences for the map data screen for the activity (**Activity Map Settings**, page 27).
- **Metronome**: Plays tones at a steady rhythm to help you improve your performance by training at a faster, slower, or more consistent cadence (**Using the Metronome**, page 7).
- **Pool Size**: Sets the pool length for pool swimming.
- **Power Save Timeout**: Sets the power-save timeout options for the activity (**Power Save Timeout Settings**, page 28).
- **Rename**: Sets the activity name.
- **Repeat**: Enables the Repeat option for multisport activities. For example, you can use this option for activities that include multiple transitions, such as a swimrun.
- **Routing**: Sets the preferences for calculating routes for the activity (**Routing Settings**, page 27).
- **Scoring**: Enables or disables scorekeeping automatically when you start a round of golf. The Always Ask option prompts you when you begin a round.
- **Segment Alerts**: Enables prompts that alert you to approaching segments.
- **Stat Tracking**: Enables statistics tracking while playing golf.
- **Stroke Detect**: Enables stroke detection for pool swimming.
- **Transitions**: Enables transitions for multisport activities.

### Customizing the Data Screens
You can show, hide, and change the layout and content of data screens for each activity.

1 Hold **MENU**.
2 Select **Settings > Activities & Apps**.
3 Select the activity to customize.
4 Select the activity settings.
5 Select **Data Screens**.
6 Select a data screen to customize.
7 Select an option:
   - Select **Layout** to adjust the number of data fields on the data screen.
   - Select a field to change the data that appears in the field.
   - Select **Reorder** to change the location of the data screen in the loop.
   - Select **Remove** to remove the data screen from the loop.
8 If necessary, select **Add New** to add a data screen to the loop.

You can add a custom data screen, or select one of the predefined data screens.

### Adding a Map to an Activity
You can add the map to the data screens loop for an activity.

1 Hold **MENU**.
2 Select **Settings > Activities & Apps**.
3 Select the activity to customize.
4 Select the activity settings.
5 Select **Data Screens > Add New > Map**.

### Alerts
You can set alerts for each activity, which can help you to train toward specific goals, to increase your awareness of your environment, and to navigate to your destination. Some alerts are available only for specific activities. There are three types of alerts: event alerts, range alerts, and recurring alerts.

- **Event alert**: An event alert notifies you once. The event is a specific value. For example, you can set the device to alert you when you reach a specified elevation.
- **Range alert**: A range alert notifies you each time the device is above or below a specified range of values. For example, you can set the device to alert you when your heart rate is below 60 beats per minute (bpm) and over 210 bpm.
- **Recurring alert**: A recurring alert notifies you each time the device records a specified value or interval. For example, you can set the device to alert you every 30 minutes.
Activity Map Settings

</tbody>
</table>

Setting an Alert

1. Hold MENU.
2. Select Settings > Activities & Apps.
3. Select an activity.
4. Select the activity settings.
5. Select Alerts.
6. Select an option:
   - Select Add New to add a new alert for the activity.
   - Select the alert name to edit an existing alert.
7. If necessary, select the type of alert.
8. Select a zone, enter the minimum and maximum values, or enter a custom value for the alert.
9. If necessary, turn on the alert.

For event and recurring alerts, a message appears each time you reach the alert value. For range alerts, a message appears each time you exceed or drop below the specified range (minimum and maximum values).

Activity Map Settings

You can customize the appearance of the map data screen for each activity.

Hold MENU, select Settings > Activities & Apps, select an activity, select the activity settings, and select Map.

Configure Maps: Shows or hides data from installed map products.

Use Sys. Settings: Enables the device to use the preferences from the system map settings.

Orientation: Sets the orientation of the map. The North Up option shows north at the top of the screen. The Track Up option shows your current direction of travel at the top of the screen.

User Locations: Shows or hides saved locations on the map.

Auto Zoom: Automatically selects the zoom level for optimal use of your map. When disabled, you must zoom in or out manually.

Lock on Road: Locks the position icon, which represents your position on the map, onto the nearest road.

Track Log: Shows or hides the track log, or the path you have traveled, as a colored line on the map.

Track Color: Changes the track log color.

Detail: Sets the amount of detail shown on the map. Showing more detail may cause the map to redraw more slowly.

Marine: Sets the map to display data in marine mode (Marine Map Settings, page 31).

Draw Segments: Shows or hides segments, as a colored line on the map.

Routing Settings

You can change the routing settings to customize the way the device calculates routes for each activity.

Hold MENU, select Settings > Activities & Apps, select an activity, select the activity settings, and select Routing.

Activity: Sets an activity for routing. The device calculates routes optimized for the type of activity you are doing.

Courses: Sets how you navigate courses using the device. Use the Follow Course option to navigate a course exactly as it appears, without recalculating. Use the Use Map option to navigate a course using routable maps, and recalculate the route if you stray from the course.

Calculation Method: Sets the calculation method to minimize the time, distance, or ascent in routes.

Avoidances: Sets the road or transportation types to avoid in routes.

Type: Sets the behavior of the pointer that appears during direct routing.

Auto Lap

Marking Laps by Distance

You can use Auto Lap to mark a lap at a specific distance automatically. This feature is helpful for comparing your performance over different parts of an activity (for example, every 1 mile or 5 kilometers).

1. Hold MENU.
2. Select Settings > Activities & Apps.
3. Select an activity.
4. Select the activity settings.
5. Select Auto Lap.
6. Select an option:
   - Select Auto Lap to turn Auto Lap on or off.
   - Select Auto Distance to adjust the distance between laps.

Each time you complete a lap, a message appears that displays the time for that lap. The device also beeps or vibrates if audible tones are turned on (System Settings, page 31).

If necessary, you can customize the data pages to display additional lap data (Customizing the Data Screens, page 26).

Customizing the Lap Alert Message

You can customize one or two data fields that appear in the lap alert message.

1. Hold MENU.
2. Select Settings > Activities & Apps.
3. Select an activity.
4. Select the activity settings.
5. Select Auto Lap > Lap Alert.
6. Select a data field to change it.

Customizing Your Device
Enabling Auto Pause
You can use the Auto Pause feature to pause the timer automatically when you stop moving. This feature is helpful if your activity includes stop lights or other places where you must stop.

NOTE: History is not recorded while the timer is stopped or paused.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Auto Pause.
6 Select an option:
   • To pause the timer automatically when you stop moving, select When Stopped.
   • To pause the timer automatically when your pace or speed drops below a specified level, select Custom.

Enabling Auto Climb
You can use the auto climb feature to detect elevation changes automatically. You can use it during activities such as climbing, hiking, running, or biking.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Auto Climb > Status > On.
6 Select an option:
   • Select Run Screen to identify which data screen appears while running.
   • Select Climb Screen to identify which data screen appears while climbing.
   • Select Invert Colors to reverse the display colors when changing modes.
   • Select Vertical Speed to set the rate of ascent over time.
   • Select Mode Switch to set how quickly the device changes modes.

3D Speed and Distance
You can set 3D speed and distance to calculate your speed or distance using both your elevation change and your horizontal movement over ground. You can use it during activities such as skiing, climbing, navigating, hiking, running, or biking.

Turning On and Off the Lap Key
You can turn on the Lap Key setting to record a lap or a rest during an activity using BACK. You can turn off the Lap Key setting to avoid recording laps due to accidental key presses during an activity.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Lap Key.
   The lap key status changes to On or Off based on the current setting.

Using Auto Scroll
You can use the auto scroll feature to cycle through all of the activity data screens automatically while the timer is running.

1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select the activity settings.
5 Select Auto Scroll.
6 Select a display speed.

UltraTrac
The UltraTrac feature is a GPS setting that records track points and sensor data less frequently. Enabling the UltraTrac feature increases battery life but decreases the quality of recorded activities. You should use the UltraTrac feature for activities that demand longer battery life and for which frequent sensor data updates are less important.

Power Save Timeout Settings
The timeout settings affect how long your device stays in training mode, for example, when you are waiting for a race to start. Hold MENU, select Settings > Activities & Apps, select an activity, and select the activity settings. Select Power Save Timeout to adjust the timeout settings for the activity.

Normal: Sets the device to enter low-power watch mode after 5 minutes of inactivity.

Extended: Sets the device to enter low-power watch mode after 25 minutes of inactivity. The extended mode can result in shorter battery life between charges.

Changing the Order of an Activity in the Apps List
1 Hold MENU.
2 Select Settings > Activities & Apps.
3 Select an activity.
4 Select Reorder.
5 Select UP or DOWN to adjust the position of the activity in the apps list.

Widgets
Your device comes preloaded with widgets that provide at-a-glance information. Some widgets require a Bluetooth connection to a compatible smartphone.

Some widgets are not visible by default. You can add them to the widget loop manually.

ABC: Displays combined altimeter, barometer, and compass information.
Calendar: Displays upcoming meetings from your smartphone calendar.
Calories: Displays your calorie information for the current day.
Dive Log: Displays a brief summary of your last recorded dive.
Dog tracking: Displays your dog's location information when you have a compatible dog tracking device paired with your Descent device.
Floors climbed: Tracks your floors climbed and progress toward your goal.
Golf: Displays golf information for your last round.
Heart rate: Displays your current heart rate in beats per minute (bpm) and a graph of your heart rate.
Intensity minutes: Tracks your time spent participating in moderate to vigorous activities, your weekly intensity minutes goal, and progress toward your goal.
inReach controls: Allows you to send messages on your paired inReach device.
Last activity: Displays a brief summary of your last recorded activity, such as your last run, last ride, or last swim.
Last sport: Displays a brief summary of your last recorded sport.

Music controls: Provides music player controls for your smartphone.

My day: Displays a dynamic summary of your activity today. The metrics include timed activities, intensity minutes, floors climbed, steps, calories burned, and more.

Notifications: Alerts you to incoming calls, texts, social network updates, and more, based on your smartphone notification settings.

Performance: Displays your current training status, training load, VO2 max. estimates, recovery time, FTP estimate, lactate threshold, and predicted race times.

Sensor information: Displays information from an internal sensor or a connected ANT+ sensor.

Steps: Tracks your daily step count, step goal, and data for previous days.

Surface Interval: Displays your surface interval time, tissue load, and central nervous system (CNS) oxygen toxicity percentage after a dive.

VIRB controls: Provides camera controls when you have a VIRB device paired with your Descent device.

Weather: Displays the current temperature and weather forecast.

Xero bow sight: Displays laser location information when you have a Xero bow sight paired with your Descent device.

Customizing the Widget Loop
You can change the order of widgets in the widget loop, remove widgets, and add new widgets.

1 Hold MENU.
2 Select Settings > Widgets.
3 Select a widget.
4 Select an option:
   • Select Reorder to change the location of the widget in the widget loop.
   • Select Remove to remove the widget from the widget loop.
5 Select Add Widgets.
6 Select a widget.

The widget is added to the widget loop.

inReach Remote
The inReach remote function allows you to control your inReach device using your Descent device. Go to buy.garmin.com to purchase an inReach device.

Using the inReach Remote
Before you can use the inReach remote function, you must set the inReach widget to be shown in the widget loop (Customizing the Widget Loop, page 29).

1 Turn on the inReach device.
2 On your Descent device, select UP or DOWN from the watch face to view the inReach widget.
3 Select A to search for your inReach device.
4 Select A to pair your inReach device.
5 Select A, and select an option:
   • To send an SOS message, select Initiate SOS.
     NOTE: You should only use the SOS function in a real emergency situation.
   • To send a text message, select Messages > New Message, select the message contacts, and enter the message text or select a quick text option.

   • To send a preset message, select Send Preset, and select a message from the list.
   • To view the timer and distance traveled during an activity, select Tracking.

VIRB Remote
The VIRB remote function allows you to control your VIRB action camera using your device. Go to www.garmin.com/VIRB to purchase a VIRB action camera.

Controlling a VIRB Action Camera
Before you can use the VIRB remote function, you must enable the remote setting on your VIRB camera. See the VIRB Series Owner’s Manual for more information. You must also set the VIRB widget to be shown in the widget loop (Customizing the Widget Loop, page 29).

1 Turn on your VIRB camera.
2 On your Descent device, select UP or DOWN from the watch face to view the VIRB widget.
3 Wait while the device connects to your VIRB camera.
4 Select A.
5 Select an option:
   • To record video, select Start Recording.
     The video counter appears on the Descent screen.
   • To take a photo while recording video, select DOWN.
   • To stop recording video, select A.
   • To take a photo, select Take Photo.
   • To change video and photo settings, select Settings.

Controlling a VIRB Action Camera During an Activity
Before you can use the VIRB remote function, you must enable the remote setting on your VIRB camera. See the VIRB Series Owner’s Manual for more information. You must also set the VIRB widget to be shown in the widget loop (Customizing the Widget Loop, page 29).

1 Turn on your VIRB camera.
2 On your Descent device, select UP or DOWN from the watch face to view the VIRB widget.
3 Wait while the device connects to your VIRB camera.

When the camera is connected, a VIRB data screen is automatically added to the activity apps.

NOTE: The VIRB data screen is not available for dive activities.

4 During an activity, select UP or DOWN to view the VIRB data screen.
5 Hold MENU.
6 Select VIRB Remote.
7 Select an option:
   • To control the camera using the activity timer, select Settings > Timer Start/Stop.
   • To manually record video, select Start Recording.
   • To manually stop recording video, select A.
   • To take a photo, select Take Photo.

Using the Stress Level Widget
The stress level widget displays your current stress level and a graph of your stress level for the last several hours. It can also guide you through a breathing activity to help you relax.
1 While you are sitting or inactive, select UP or DOWN to view the stress level widget.

**TIP:** If you are too active for the watch to determine your stress level, a message appears instead of a stress level number. You can check your stress level again after several minutes of inactivity.

2 Select A to view a graph of your stress level for the last four hours.

Blue bars indicate periods of rest. Yellow bars indicate periods of stress. Gray bars indicate times that you were too active to determine your stress level.

3 To start a breathing activity, select DOWN > A, and enter a duration for the breathing activity in minutes.

### Customizing the Controls Menu

You can add, remove, and change the order of the shortcut menu options in the controls menu (Viewing the Controls Menu, page 1).

1 Hold MENU.
2 Select Settings > Controls.
3 Select a shortcut to customize.
4 Select an option:
   - Select Reorder to change the location of the shortcut in the controls menu.
   - Select Remove to remove the shortcut from the controls menu.
5 If necessary, select Add New to add an additional shortcut to the controls menu.

### Watch Face Settings

You can customize the appearance of the watch face by selecting the layout, colors, and additional data. You can also download custom watch faces from the Connect IQ store.

#### Customizing the Watch Face

Before you can activate a Connect IQ watch face, you must install a watch face from the Connect IQ store (Connect IQ Features, page 12).

You can customize the watch face information and appearance, or activate an installed Connect IQ watch face.

1 From the watch face, hold MENU.
2 Select Watch Face.
3 Select UP or DOWN to preview the watch face options.
4 Select Add New to scroll through additional pre-loaded watch faces.
5 Select A > Apply to activate a pre-loaded watch face or an installed Connect IQ watch face.
6 If using a pre-loaded watch face, select A > Customize.
7 Select an option:
   - To change the style of the numbers for the analog watch face, select Dial.
   - To change the style of the hands for the analog watch face, select Hands.
   - To change the style of the numbers for the digital watch face, select Layout.
   - To change the style of the seconds for the digital watch face, select Seconds.
   - To change the data that appears on the watch face, select Data.
   - To add or change an accent color for the watch face, select Accent Color.
   - To change the background color, select Bkgd. Color.
   - To save the changes, select Done.

### Sensors Settings

#### Compass Settings

Hold MENU, and select Settings > Sensors & Accessories > Compass.

**Calibrate:** Allows you to manually calibrate the compass sensor (Calibrating the Compass Manually, page 30).

**Display:** Sets the directional heading on the compass to letters, degrees, or milli-radians.

**North Ref.:** Sets the north reference of the compass (Setting the North Reference, page 30).

**Mode:** Sets the compass to use electronic-sensor data only (On), a combination of GPS and electronic-sensor data when moving (Auto), or GPS data only (Off).

#### Calibrating the Compass Manually

**NOTICE**

Calibrate the electronic compass outdoors. To improve heading accuracy, do not stand near objects that influence magnetic fields, such as vehicles, buildings, and overhead power lines.

Your device was already calibrated at the factory, and the device uses automatic calibration by default. If you experience irregular compass behavior, for example, after moving long distances or after extreme temperature changes, you can manually calibrate the compass.

1 Hold MENU.
2 Select Settings > Sensors & Accessories > Compass > Calibrate > Start.
3 Follow the on-screen instructions.
   **TIP:** Move your wrist in a small figure eight motion until a message appears.

#### Setting the North Reference

You can set the directional reference used in calculating heading information.

1 Hold MENU.
2 Select Settings > Sensors & Accessories > Compass > North Ref.
3 Select an option:
   - To set geographic north as the heading reference, select True.
   - To set the magnetic declination for your location automatically, select Magnetic.
   - To set grid north (000º) as the heading reference, select Grid.
   - To set the magnetic variation value manually, select User, enter the magnetic variance, and select Done.

### Altimeter Settings

Hold MENU, and select Settings > Sensors & Accessories > Altimeter.

**Calibrate:** Allows you to manually calibrate the altimeter sensor.

**Auto Cal.:** Allows the altimeter to self-calibrate each time you turn on GPS tracking.

**Elevation:** Sets the units of measure for elevation.

#### Calibrating the Barometric Altimeter

Your device was already calibrated at the factory, and the device uses automatic calibration at your GPS starting point by default. You can manually calibrate the barometric altimeter if you know the correct elevation.

1 Hold MENU.
2 Select Settings > Sensors & Accessories > Altimeter.
3 Select an option:
   • To calibrate automatically from your GPS starting point, select Auto Cal., and select an option.
   • To enter the current elevation, select Calibrate.

Barometer Settings
Hold MENU, and select Settings > Sensors & Accessories > Barometer.

Calibrate: Allows you to manually calibrate the barometer sensor.
Plot: Sets the time scale for the chart in the barometer widget.
Storm Alert: Sets the rate of barometric pressure change that triggers a storm alert.
Watch Mode: Sets the sensor used in watch mode. The Auto option uses both the altimeter and barometer according to your movement. You can use the Altimeter option when your activity involves changes in altitude, or the Barometer option when your activity does not involve changes in altitude.
Pressure: Shows how the device displays pressure data.

Calibrating the Barometer
Your device was already calibrated at the factory, and the device uses automatic calibration at your GPS starting point by default. You can manually calibrate the barometer if you know the correct elevation or the correct sea level pressure.
1 Hold MENU.
2 Select Settings > Sensors & Accessories > Barometer > Calibrate.
3 Select an option:
   • To enter the current elevation or sea level pressure, select Yes.
   • To calibrate automatically from your GPS starting point, select Use GPS.

Map Settings
You can customize how the map appears in the map app and data screens.
Hold MENU, and select Settings > Map.

Orientation: Sets the orientation of the map. The North Up option shows north at the top of the screen. The Track Up option shows your current direction of travel at the top of the screen.
User Locations: Shows or hides saved locations on the map.
Auto Zoom: Automatically selects the zoom level for optimal use of your map. When disabled, you must zoom in or out manually.
Lock on Road: Locks the position icon, which represents your position on the map, onto the nearest road.
Track Log: Shows or hides the track log, or the path you have traveled, as a colored line on the map.
Track Color: Changes the track log color.
Detail: Sets the amount of detail shown on the map. Showing more detail may cause the map to redraw more slowly.
Marine: Sets the map to display data in marine mode (Marine Map Settings, page 31).
Draw Segments: Shows or hides segments, as a colored line on the map.

Marine Map Settings
You can customize how the map appears in marine mode.
Hold MENU, and select Settings > Map > Marine.

Marine Chart Mode: Enables the nautical chart when displaying marine data. This option displays various map features in different colors so the marine POIs are more readable, and so the map reflects the drawing scheme of paper charts.

Spot Soundings: Enables depth measurements on the chart.
Light Sectors: Shows and configures the appearance of light sectors on the chart.
Symbol Set: Sets the chart symbols in marine mode. The NOAA option displays the National Oceanic and Atmospheric Administration chart symbols. The International option displays the International Association of Lighthouse Authorities chart symbols.

Showing and Hiding Map Data
If you have multiple maps installed on your device, you can choose the map data to show on the map.
1 Select ▲ > Map.
2 Hold MENU.
3 Select the map settings.
4 Select Map > Configure Maps.
5 Select a map to activate the toggle switch, which shows or hides the map data.

GroupTrack Settings
Hold MENU, and select Settings > GroupTrack.
Show on Map: Enables you to view connections on the map screen during a GroupTrack session.
Activity Types: Allows you to select which activity types appear on the map screen during a GroupTrack session.

Navigation Settings
You can customize the map features and appearance when navigating to a destination.

Customizing Map Features
1 Hold MENU.
2 Select Settings > Navigation > Data Screens.
3 Select an option:
   • Select Map to turn on or off the map.
   • Select Guide to turn on or off the guide screen that displays the compass bearing or course to follow while navigating.
   • Select Elevation Plot to turn on or off the elevation plot.
   • Select a screen to add, remove, or customize.

Setting Up a Heading Bug
You can set up a heading indicator to display on your data pages while navigating. The indicator points to your target heading.
1 Hold MENU.
2 Select Settings > Navigation > Heading Bug.

Setting Navigation Alerts
You can set alerts to help you navigate to your destination.
1 Hold MENU.
2 Select Settings > Navigation > Alerts.
3 Select an option:
   • To set an alert for a specified distance from your final destination, select Final Distance.
   • To set an alert for the estimated time remaining until you reach your final destination, select Final ETE.
   • To set an alert when you stray from the course, select Off Course.
4 If necessary, select Status to turn on the alert.
5 If necessary, enter a distance or time value, and select ✓.

System Settings
Hold MENU, and select Settings > System.
Changing the Backlight Settings

1. Hold MENU, and select Settings > System > Time.
2. Select Time Settings.
3. Set Time zone and daylight savings time options.
4. Set Time format to 12-hour, 24-hour, or military format.
5. Set the time zone automatically based on your GPS position.

Changing the Backlight Settings

1. Hold MENU, and select Settings > System > Backlight.
2. Select an option:
   • Select In-Dive.
   • Select During Activity.
   • Select Not During Activity.
3. Select an option:
   • Select Mode to turn on the backlight at depth or throughout your dive.
   • Select Keys to turn on the backlight for key presses.
   • Select Alerts to turn on the backlight for alerts.
   • Select Gesture to turn on the backlight by raising and turning your arm to look at your wrist.
4. Select Timeout to set the length of time before the backlight turns off.
5. Select Brightness to set the brightness level of the backlight.

Customizing the Hot Keys

You can customize the hold function of individual keys and combinations of keys.

1. Hold MENU.
2. Select Settings > System > Hot Keys.
3. Select a key or combination of keys to customize.
4. Select a function.

Changing the Units of Measure

You can customize units of measure for distance, pace and speed, elevation, weight, height, and temperature.

1. Hold MENU.
2. Select Settings > System > Units.
3. Select a measurement type.
4. Select a unit of measure.

Viewing Device Information

You can view device information, such as the unit ID, software version, regulatory information, and license agreement.

1. Hold MENU.
2. Select Settings > About.

Viewing E-label Regulatory and Compliance Information

The label for this device is provided electronically. The e-label may provide regulatory information, such as identification numbers provided by the FCC or regional compliance markings, as well as applicable product and licensing information.

1. Hold MENU.
2. From the settings menu, select About.

Wireless Sensors

Your device can be used with wireless ANT+ or Bluetooth sensors. For more information about compatibility and purchasing optional sensors, go to buy.garmin.com.

Pairing Your Wireless Sensors

The first time you connect a wireless sensor to your device using ANT+ or Bluetooth technology, you must pair the device and sensor. After they are paired, the device connects to the sensor automatically when you start an activity and the sensor is active and within range.

1. If you are pairing a heart rate monitor, put on the heart rate monitor (Putting On the Heart Rate Monitor, page 13). The heart rate monitor does not send or receive data until you put it on.
2. Bring the device within 3 m (10 ft.) of the sensor.
   • NOTE: Stay 10 m (33 ft.) away from other wireless sensors while pairing.
3. Hold MENU.
5. Select an option:
   • Select Search All.
   • Select your sensor type.

After the sensor is paired with your device, the sensor status changes from Searching to Connected. Sensor data appears in the data screen loop or a custom data field.
Extended Display Mode
You can use Extended Display mode to display data screens from your Descent device on a compatible Edge device during a ride or triathlon. See your Edge owner's manual for more information.

Using an Optional Bike Speed or Cadence Sensor
You can use a compatible bike speed or cadence sensor to send data to your device.
- Pair the sensor with your device (Pairing Your Wireless Sensors, page 32).
- Set your wheel size (Wheel Size and Circumference, page 40).
- Go for a ride (Starting an Activity, page 6).

Training with Power Meters
Go to www.garmin.com/intoSports for a list of ANT+ sensors that are compatible with your device (such as Vector™).
- For more information, see the owner’s manual for your power meter.
- Adjust your power zones to match your goals and abilities (Setting Your Power Zones, page 19).
- Use range alerts to be notified when you reach a specified power zone (Setting an Alert, page 27).
- Customize the power data fields (Customizing the Data Screens, page 26).

Using Electronic Shifters
Before you can use compatible electronic shifters, such as Shimano® DI²™ shifters, you must pair them with your device (Pairing Your Wireless Sensors, page 32). You can customize the optional data fields (Customizing the Data Screens, page 26). The Descent Mk1 device displays current adjustment values when the sensor is in adjustment mode.

Situational Awareness
Your Descent device can be used with the Varia Vision™ device, Varia™ smart bike lights, and rearview radar to improve situational awareness. See the owner's manual for your Varia device for more information.
NOTE: You may need to update the Descent software before pairing Varia devices (Updating the Software Using Garmin Connect Mobile, page 11).

Foot Pod
Your device is compatible with the foot pod. You can use the foot pod to record pace and distance instead of using GPS when you are training indoors or when your GPS signal is weak. The foot pod is on standby and ready to send data (like the heart rate monitor).
After 30 minutes of inactivity, the foot pod powers off to conserve the battery. When the battery is low, a message appears on your device. Approximately five hours of battery life remain.

Improving Foot Pod Calibration
Before you can calibrate your device, you must acquire GPS signals and pair your device with the foot pod (Pairing Your Wireless Sensors, page 32).
The foot pod is self-calibrating, but you can improve the accuracy of the speed and distance data with a few outdoor runs using GPS.
1. Stand outside for 5 minutes with a clear view of the sky.
2. Start a running activity.
3. Run on a track without stopping for 10 minutes.
4. Stop your activity, and save it.
   Based on the recorded data, the foot pod calibration value changes, if necessary. You should not need to calibrate the foot pod again unless your running style changes.

Calibrating Your Foot Pod Manually
Before you can calibrate your device, you must pair your device with the foot pod sensor (Pairing Your Wireless Sensors, page 32).
Manual calibration is recommended if you know your calibration factor. If you have calibrated a foot pod with another Garmin product, you may know your calibration factor.
1. Hold MENU.
2. Select Settings > Sensors & Accessories.
3. Select your foot pod.
5. Adjust the calibration factor:
   - Increase the calibration factor if your distance is too low.
   - Decrease the calibration factor if your distance is too high.

Setting Foot Pod Speed and Distance
Before you can customize the foot pod speed and distance, you must pair your device with the foot pod sensor (Pairing Your Wireless Sensors, page 32).
You can set your device to calculate speed and distance using your foot pod data instead of GPS data.
1. Hold MENU.
2. Select Settings > Sensors & Accessories.
3. Select your foot pod.
4. Select Speed or Distance.
5. Select an option:
   - Select Indoor when you are training with GPS turned off, usually indoors.
   - Select Always to use your foot pod data regardless of the GPS setting.

**tempe™**
The tempe is an ANT+ wireless temperature sensor. You can attach the sensor to a secure strap or loop where it is exposed to ambient air, and therefore, provides a consistent source of accurate temperature data. You must pair the tempe with your device to display temperature data from the tempe.

Data Management
NOTE: The device is not compatible with Windows® 95, 98, Me, Windows NT®, and Mac® OS 10.3 and earlier.

Disconnecting the USB Cable
If your device is connected to your computer as a removable drive or volume, you must safely disconnect your device from your computer to avoid data loss. If your device is connected to your Windows computer as a portable device, it is not necessary to safely disconnect the device.

1. Complete an action:
   - For Windows computers, select the Safely Remove Hardware icon in the system tray, and select your device.
   - For Apple computers, select the device, and select File > Eject.
2. Disconnect the cable from your computer.

Deleting Files

NOTICE
If you do not know the purpose of a file, do not delete it. Your device memory contains important system files that should not be deleted.

1. Open the Garmin drive or volume.
2. If necessary, open a folder or volume.
4. Press the Delete key on your keyboard.
   NOTE: If you are using an Apple computer, you must empty the Trash folder to completely remove the files.

Device Maintenance

Device Care

NOTICE
Do not use a sharp object to clean the device.

Avoid chemical cleaners, solvents, and insect repellents that can damage plastic components and finishes.

Thoroughly rinse the device with fresh water after exposure to chlorine, salt water, sunscreen, cosmetics, alcohol, or other harsh chemicals. Prolonged exposure to these substances can damage the case.

Do not wash the device under high pressure, because jets of water or air may cause damage to the depth sensor or barometer.

Avoid extreme shock and harsh treatment, because it can degrade the life of the product.

Do not store the device where prolonged exposure to extreme temperatures can occur, because it can cause permanent damage.

Cleaning the Device

NOTICE
Even small amounts of sweat or moisture can cause corrosion of the electrical contacts when connected to a charger. Corrosion can prevent charging and data transfer.

1. Wipe the device using a cloth dampened with a mild detergent solution.
2. Wipe it dry.

After cleaning, allow the device to dry completely.

TIP: For more information, go to www.garmin.com/fitandcare.

Changing the QuickFit™ Bands

1. Slide the latch on the QuickFit band, and remove the band from the watch.

2. Align the new band with the watch.
3. Press the band into place.
   NOTE: Make sure the band is secure. The latch should close over the watch pin.
4. Repeat steps 1 through 3 to change the other band.

Extra Long Diving Band
Your device comes with an extra long band you can wear over a thick exposure suit.

Metal Watch Band Adjustment
If your watch includes a metal watch band, you should take your watch to a jeweler or other professional to adjust the length of the metal band.

Troubleshooting

My device is in the wrong language
You can change the device language selection if you have accidentally selected the wrong language on the device.

1. Hold MENU.
2. Scroll down to the last item in the list, and select ▲.
3. Scroll down to the second to last item in the list, and select ▲.
4. Select ▲.
5. Select your language.

Is my smartphone compatible with my device?
The Descent Mk1 device is compatible with smartphones using Bluetooth wireless technology.
My phone will not connect to the device
If your phone will not connect to the device, you can try these tips.
• Turn off your smartphone and your device, and turn them back on again.
• Enable Bluetooth technology on your smartphone.
• Update the Garmin Connect Mobile app to the latest version.
• Remove your device from the Garmin Connect Mobile app to retry the pairing process.
If you are using an Apple device, you should also remove your device from the Bluetooth settings on your smartphone.
• Bring your smartphone within 10 m (33 ft.) of the device.
• On your smartphone, open the Garmin Connect Mobile app, select ⌘ or •••, and select Garmin Devices > Add Device to enter pairing mode.
• On your device, hold LIGHT, and select ⌘ to turn on Bluetooth technology and enter pairing mode.

Can I use my Bluetooth sensor with my watch?
The device is compatible with some Bluetooth sensors. The first time you connect a sensor to your Garmin device, you must pair the device and sensor. After they are paired, the device connects to the sensor automatically when you start an activity and the sensor is active and within range.
1 Hold MENU.
2 Select Settings > Sensors & Accessories > Add New.
3 Select an option:
   • Select Search All.
   • Select your sensor type.
You can customize the optional data fields (Customizing the Data Screens, page 26).

Restarting Your Device
1 Hold LIGHT until the device turns off.
2 Hold LIGHT to turn on the device.

Restoring All Default Settings
NOTE: This deletes all user-entered information and activity history.
You can restore all of the device settings to the factory default values.
1 Hold MENU.
2 Select Settings > System > Restore Defaults > Reset Settings.

Resetting Your Tissue Load
You can reset your current tissue load saved on the device. You should reset your tissue load only if you do not plan to use the device again in the future. This can be useful for dive shops that provide devices for rent.
1 Hold MENU.
2 Select Settings > System > Restore Defaults.
3 Select an option:
   • To reset your current tissue load, select Reset Tissues.
   • To reset all device settings and your current tissue load, select Reset Settings and Tissues.

Acquiring Satellite Signals
The device may need a clear view of the sky to acquire satellite signals. The time and date are set automatically based on the GPS position.
1 Go outdoors to an open area.
   The front of the device should be oriented toward the sky.
2 Wait while the device locates satellites.
   It may take 30–60 seconds to locate satellite signals.

Improving GPS Satellite Reception
• Frequently sync the device to your Garmin Connect account:
  ◦ Connect your device to a computer using the USB cable and the Garmin Express application.
  ◦ Sync your device to the Garmin Connect Mobile app using your Bluetooth enabled smartphone.
  ◦ Connect your device to your Garmin Connect account using a Wi-Fi wireless network.
While connected to your Garmin Connect account, the device downloads several days of satellite data, allowing it to quickly locate satellite signals.
• Take your device outside to an open area away from tall buildings and trees.
• Remain stationary for a few minutes.

The temperature reading is not accurate
Your body temperature affects the temperature reading for the internal temperature sensor. To get the most accurate temperature reading, you should remove the watch from your wrist and wait 20 to 30 minutes.
You can also use an optional tempe external temperature sensor to view accurate ambient temperature readings while wearing the watch.

Maximizing the Battery Life
You can do several things to extend the life of the battery.
• Reduce the backlight timeout (Changing the Backlight Settings, page 32).
• Reduce the backlight brightness.
• Use UltraTrac GPS mode for your activity (UltraTrac, page 28).
• Turn off Bluetooth wireless technology when you are not using connected features (Connected Features, page 9).
• When pausing your activity for a longer period of time, use the resume later option (Stopping an Activity, page 6).
• Turn off activity tracking (Turning Off Activity Tracking, page 20).
• Use a watch face that is not updated every second.
   For example, use a watch face without a second hand (Customizing the Watch Face, page 30).
• Limit the smartphone notifications the device displays (Managing Notifications, page 10).
• Stop broadcasting heart rate data to paired Garmin devices (Broadcasting Heart Rate Data to Garmin Devices, page 12).
• Turn off wrist-based heart rate monitoring (Turning Off the Wrist-based Heart Rate Monitor, page 13).

Activity Tracking
For more information about activity tracking accuracy, go to garmin.com/ataccuracy.

My daily step count does not appear
The daily step count is reset every night at midnight.
If dashes appear instead of your step count, allow the device to acquire satellite signals and set the time automatically.

**My step count does not seem accurate**
If your step count does not seem accurate, you can try these tips.
- Wear the device on your non-dominant wrist.
- Carry the device in your pocket when pushing a stroller or lawn mower.
- Carry the device in your pocket when actively using your hands or arms only.

**NOTE:** The device may interpret some repetitive motions, such as washing dishes, folding laundry, or clapping your hands, as steps.

**The step counts on my device and my Garmin Connect account don’t match**
The step count on your Garmin Connect account updates when you synchronize your device.

1. Select an option:
   - Synchronize your step count with the Garmin Connect application ([Using Garmin Connect on Your Computer, page 11](#)).
   - Synchronize your step count with the Garmin Connect Mobile app ([Manually Syncing Data with Garmin Connect Mobile, page 11](#)).

2. Wait while the device synchronizes your data.

**NOTE:** Refreshing the Garmin Connect Mobile app or the Garmin Connect application does not synchronize your data or update your step count.

**The floors climbed amount does not seem accurate**
Your device uses an internal barometer to measure elevation changes as you climb floors. A floor climbed is equal to 3 m (10 ft.).
- Avoid holding handrails or skipping steps while climbing stairs.
- In windy environments, cover the device with your sleeve or jacket as strong gusts can cause erratic readings.

**My intensity minutes are flashing**
When you exercise at an intensity level that qualifies toward your intensity minutes goal, the intensity minutes flash.

Exercise for at least 10 consecutive minutes at a moderate or vigorous intensity level.

**Getting More Information**
You can find more information about this product on the Garmin website.
- Go to [support.garmin.com](http://support.garmin.com) for additional manuals, articles, and software updates.
- Go to [http://buy.garmin.com](http://buy.garmin.com), or contact your Garmin dealer for information about optional accessories and replacement parts.

**Appendix**

**Data Fields**
- **%FTP:** The current power output as a percentage of functional threshold power.
- **%HRR:** The percentage of heart rate reserve (maximum heart rate minus resting heart rate).
- **10s Avg. Power:** The 10-second moving average of power output.
- **10s Avg Balance:** The 10-second moving average of the left/right power balance.
- **24-Hour Max.:** The maximum temperature recorded in the last 24 hours from a compatible temperature sensor.
- **24-Hour Min.:** The minimum temperature recorded in the last 24 hours from a compatible temperature sensor.
- **30s Avg. Power:** The 30-second moving average of power output.
- **30s Avg Balance:** The 30-second moving average of the left/right power balance.
- **3s Avg. Balance:** The three-second moving average of the left/right power balance.
- **3s Avg. Power:** The 3-second moving average of power output.
- **500m Pace:** The current rowing pace per 500 meters.
- **Aerobic TE:** The impact of the current activity on your aerobic fitness level.
- **Anaerobic TE:** The impact of the current activity on your anaerobic fitness level.
- **Average HR:** The average heart rate for the current activity.
- **Average Pace:** The average pace for the current activity.
- **Average Power:** The average power output for the current activity.
- **Average Swolf:** The average swolf score for the current activity.
  - Your swolf score is the sum of the time for one length plus the number of strokes for that length ([Swim Terminology, page 8](#)). In open water swimming, 25 meters is used to calculate your swolf score.
- **Avg. %HRR:** The average percentage of heart rate reserve (maximum heart rate minus resting heart rate) for the current activity.
- **Avg. 500m Pace:** The average rowing pace per 500 meters for the current activity.
- **Avg. Ascent:** The average vertical distance of ascent since the last reset.
- **Avg. Balance:** The average left/right power balance for the current activity.
- **Avg. Cadence:** Cycling. The average cadence for the current activity.
- **Avg. Cadence:** Running. The average cadence for the current activity.
- **Avg. Descent:** The average vertical distance of descent since the last reset.
- **Avg. GCT Bal.:** The average ground contact time balance for the current session.
- **Avg. L. PP:** The average power phase angle for the left leg for the current activity.
- **Avg. L. PPP:** The average power phase peak angle for the left leg for the current activity.
- **Avg. Lap Time:** The average lap time for the current activity.
- **Avg. Moving Speed:** The average speed when moving for the current activity.
- **Avg. Nautical Speed:** The average speed in knots for the current activity.
- **Avg. Overall Speed:** The average speed for the current activity, including both moving and stopped speeds.
- **Avg. PCO:** The average platform center offset for the current activity.
- **Avg. R. PP:** The average power phase angle for the right leg for the current activity.
Avg. R. PPP: The average power phase peak angle for the right leg for the current activity.
Avg. Speed: The average speed for the current activity.
Avg. Stride Len.: The average stride length for the current session.
Avg. Strk/Len: The average number of strokes per pool length during the current activity.
Avg. Strk Rate: Paddle sports. The average number of strokes per minute (spm) during the current activity.
Avg. Vert. Osc.: The average amount of vertical oscillation for the current activity.
Avg. Vert. Ratio: The average ratio of vertical oscillation to stride length for the current session.
Avg Dist Per Stk: Swimming. The average distance traveled per stroke during the current activity.
Avg Dist Per Stk: Paddle sports. The average distance traveled per stroke during the current activity.
Avg GCT: The average amount of ground contact time for the current activity.
Avg HR %Max.: The average percentage of maximum heart rate for the current activity.
Balance: The current left/right power balance.
Battery Level: The remaining battery power.
Bearing: The direction from your current location to a destination. You must be navigating for this data to appear.
Cadence: Cycling. The number of revolutions of the crank arm. Your device must be connected to a cadence accessory for this data to appear.
Cadence: Running. The steps per minute (right and left).
Calories: The amount of total calories burned.
Compass Hdg.: The direction you are moving based on the compass.
Course: The direction from your starting location to a destination. Course can be viewed as a planned or set route. You must be navigating for this data to appear.
Dest. Location: The position of your final destination.
Dest. Wpt: The last point on the route to the destination. You must be navigating for this data to appear.
Di2 Battery: The remaining battery power of a Di2 sensor.
Dist. Per Stroke: Paddle sports. The distance traveled per stroke.
Dist. Remaining: The remaining distance to the final destination. You must be navigating for this data to appear.
Distance: The distance traveled for the current track or activity.
Distance To Next: The remaining distance to the next waypoint on the route. You must be navigating for this data to appear.
Elapsed Time: The total time recorded. For example, if you start the timer and run for 10 minutes, then stop the timer for 5 minutes, then start the timer and run for 20 minutes, your elapsed time is 35 minutes.
Elevation: The altitude of your current location above or below sea level.
Estimated Total Distance: The estimated distance from the start to the final destination. You must be navigating for this data to appear.
ETA: The estimated time of day when you will reach the final destination (adjusted to the local time of the destination). You must be navigating for this data to appear.
ETA at Next: The estimated time of day when you will reach the next waypoint on the route (adjusted to the local time of the waypoint). You must be navigating for this data to appear.
ETE: The estimated time remaining until you reach the final destination. You must be navigating for this data to appear.
Floors Climbed: The total number of floors climbed up for the day.
Floors Descended: The total number of floors climbed down for the day.
Floors per Minute: The number of floors climbed up per minute.
Front: The front bike gear from a gear position sensor.
GCT: The amount of time in each step that you spend on the ground while running, measured in milliseconds. Ground contact time is not calculated while walking.
GCT Balance: The left/right balance of ground contact time while running.
Gear Battery: The battery status of a gear position sensor.
Gear Combo: The current gear combination from a gear position sensor.
Gear Ratio: The number of teeth on the front and rear bike gears, as detected by a gear position sensor.
Gears: The front and rear bike gears from a gear position sensor.
Glide Ratio: The ratio of horizontal distance traveled to the change in vertical distance.
Glide Ratio Dest.: The glide ratio required to descend from your current position to the destination elevation. You must be navigating for this data to appear.
GPS: The strength of the GPS satellite signal.
GPS Elevation: The altitude of your current location using GPS.
GPS Heading: The direction you are moving based on GPS.
Grade: The calculation of rise (elevation) over run (distance). For example, if for every 3 m (10 ft.) you climb you travel 60 m (200 ft.), the grade is 5%.
Heading: The direction you are moving.
Heart Rate: Your heart rate in beats per minute (bpm). Your device must be connected to a compatible heart rate monitor.
HR %Max.: The percentage of maximum heart rate.
HR Zone: The current range of your heart rate (1 to 5). The default zones are based on your user profile and maximum heart rate (220 minus your age).
Int. Avg. %HRR: The average percentage of heart rate reserve (maximum heart rate minus resting heart rate) for the current swim interval.
Int. Avg. %Max.: The average percentage of maximum heart rate for the current swim interval.
Int. Avg. HR: The average heart rate for the current swim interval.
Int. Distance: The distance traveled for the current interval.
Int. Max. %HRR: The maximum percentage of heart rate reserve (maximum heart rate minus resting heart rate) for the current swim interval.
Int. Max. %Max.: The maximum percentage of maximum heart rate for the current swim interval.
Int. Max. HR: The maximum heart rate for the current swim interval.
Int. Pace: The average pace for the current interval.
Int. Swolf: The average swolf score for the current interval.
Intensity Factor: The Intensity Factor™ for the current activity.
Interval Lengths: The number of pool lengths completed during the current interval.
Interval Time: The stopwatch time for the current interval.
Int Strk/Len: The average number of strokes per pool length during the current interval.
Int Strk Rate: The average number of strokes per minute (spm) during the current interval.
Int Strk Type: The current stroke type for the interval.
L. Lap HR %Max.: The average percentage of maximum heart rate for the last completed lap.
L. Lap Stk. Rate: Swimming. The average number of strokes per minute (spm) during the last completed lap.
L. Lap Stk. Rate: Paddle sports. The average number of strokes per minute (spm) during the last completed lap.
L. Lap Strokes: Swimming. The total number of strokes for the last completed lap.
L. Lap Strokes: Paddle sports. The total number of strokes for the last completed lap.
L. Lap Swolf: The swolf score for the last completed lap.
L. Len. Stk. Rate: The average number strokes per minute (spm) during the last completed pool length.
L. Len. Stk. Type: The stroke type used during the last completed pool length.
L. Len. Strokes: The total number of strokes for the last completed pool length.
Lap %HRR: The average percentage of heart rate reserve (maximum heart rate minus resting heart rate) for the current lap.
Lap 500m Pace: The average rowing pace per 500 meters for the current lap.
Lap Ascent: The vertical distance of ascent for the current lap.
Lap Balance: The average left/right power balance for the current lap.
Lap Cadence: Cycling. The average cadence for the current lap.
Lap Descent: The vertical distance of descent for the current lap.
Lap Dist Per Stk: Swimming. The average distance traveled per stroke during the current lap.
Lap Dist Per Stk: Paddle sports. The average distance traveled per stroke during the current lap.
Lap GCT: The average amount of ground contact time for the current lap.
Lap GCT Bal.: The average ground contact time balance for the current lap.
Lap HR: The average heart rate for the current lap.
Lap HR %Max.: The average percentage of maximum heart rate for the current lap.
Lap L. PP: The average power phase angle for the left leg for the current lap.
Lap L. PPP: The average power phase peak angle for the left leg for the current lap.
Lap NP: The average Normalized Power for the current lap.
Lap Pace: The average pace for the current lap.
Lap PCO: The average platform center offset for the current lap.
Lap Power: The average power output for the current lap.
Lap R. PP: The average power phase angle for the right leg for the current lap.
Lap R. PPP: The average power phase peak angle for the right leg for the current lap.
Laps: The number of laps completed for the current activity.
Lap Speed: The average speed for the current lap.
Lap Stride Len.: The average stride length for the current lap.
Lap Strk Rate: Swimming. The average number of strokes per minute (spm) during the current lap.
Lap Strk Rate: Paddle sports. The average number of strokes per minute (spm) during the current lap.
Lap Strokes: Swimming. The total number of strokes for the current lap.
Lap Strokes: Paddle sports. The total number of strokes for the current lap.
Lap Swolf: The swolf score for the current lap.
Lap Time: The stopwatch time for the current lap.
Lap Vert. Osc.: The average amount of vertical oscillation for the current lap.
Lap Vert. Ratio: The average ratio of vertical oscillation to stride length for the current lap.
Last Lap %HRR: The average percentage of heart rate reserve (maximum heart rate minus resting heart rate) for the last completed lap.
Last Lap Ascent: The vertical distance of ascent for the last completed lap.
Last Lap Cad.: Cycling. The average cadence for the last completed lap.
Last Lap Cad.: Running. The average cadence for the last completed lap.
Last Lap Descent: The vertical distance of descent for the last completed lap.
Last Lap Dist.: The distance traveled for the last completed lap.
Last Lap HR: The average heart rate for the last completed lap.
Last Lap NP: The average Normalized Power for the last completed lap.
Last Lap Pace: The average pace for the last completed lap.
Last Lap Power: The average power output for the last completed lap.
Last Lap Speed: The average speed for the last completed lap.
Last Lap Time: The stopwatch time for the last completed lap.
Last Len. Pace: The average pace for your last completed pool length.
Last Len. Swolf: The swolf score for the last completed pool length.
Lat/Lon: The current position in latitude and longitude regardless of the selected position format setting.
Left PP: The current power phase angle for the left leg. Power phase is the pedal stroke region where positive power is produced.
Left PPP: The current power phase peak angle for the left leg. Power phase peak is the angle range over which the rider produces the peak portion of the driving force.
Lengths: The number of pool lengths completed during the current activity.
LL 500m Pace: The average rowing pace per 500 meters for the last lap.
L Lap Dist P Stk: Swimming. The average distance traveled per stroke during the last completed lap.
L Lap Dist P Stk: Paddle sports. The average distance traveled per stroke during the last completed lap.
Location: The current position using the selected position format setting.
Max. Ascent: The maximum rate of ascent in feet per minute or meters per minute since the last reset.
Max. Descent: The maximum rate of descent in meters per minute or feet per minute since the last reset.
Max. Elevation: The highest elevation reached since the last reset.
Max. Lap Power: The top power output for the current lap.
Max. Nautical Speed: The maximum speed in knots for the current activity.
Maximum Speed: The top speed for the current activity.
Max Power: The top power output for the current activity.
Min. Elevation: The lowest elevation reached since the last reset.
Moving Time: The total time moving for the current activity.
Multisport Time: The total time for all sports in a multisport activity, including transitions.
Muscle O2 Sat. %: The estimated muscle oxygen saturation percentage for the current activity.
Nautical Dist: The distance traveled in nautical miles or nautical feet.
Nautical Speed: The current speed in knots.
Next Waypoint: The next point on the route. You must be navigating for this data to appear.
NP: The Normalized Power™ for the current activity.
Off Course: The distance to the left or right by which you have strayed from the original path of travel. You must be navigating for this data to appear.
Pace: The current pace.
PCO: The platform center offset. Platform center offset is the location on the pedal platform where force is applied.
Pedal Smooth: The measurement of how evenly a rider is applying force to the pedals throughout each pedal stroke.
Perform. Cond.: The performance condition score is a real-time assessment of your ability to perform.
Power: The current power output in watts.
Power to Weight: The current power measured in watts per kilogram.
Power Zone: The current range of power output (1 to 7) based on your FTP or custom settings.
Rear: The rear bike gear from a gear position sensor.
Repeat On: The timer for the last interval plus the current rest (pool swimming).
Reps: During a strength training activity, the number of repetitions in a workout set.
Rest Timer: The timer for the current rest (pool swimming).
Right PP: The current power phase angle for the right leg. Power phase is the pedal stroke region where positive power is produced.
Right PPP: The current power phase peak angle for the right leg. Power phase peak is the angle range over which the rider produces the peak portion of the driving force.
Set Timer: During a strength training activity, the amount of time spent in the current workout set.
Speed: The current rate of travel.
Stopped Time: The total time stopped for the current activity.
Stride Length: The length of your stride from one footfall to the next, measured in meters.
Stroke Rate: Swimming. The number of strokes per minute (spm).

VO2 Max. Standard Ratings
These tables include standardized classifications for VO2 max. estimates by age and gender.

FTP ratings are based on research by Hunter Allen and Andrew Coggan, PhD, Training and Racing with a Power Meter (Boulder, CO: VeloPress, 2010).

Wheel Size and Circumference
Your speed sensor automatically detects your wheel size. If necessary, you can manually enter your wheel circumference in the speed sensor settings.

The tire size is marked on both sides of the tire. This is not a comprehensive list. You can also measure the circumference of your wheel or use one of the calculators available on the internet.
