</table>
WARNING
Do not use terrain avoidance displays as the sole source of information for maintaining separation from terrain and obstacles. Garmin obtains terrain and obstacle data from third party sources and cannot independently verify the accuracy of the information.

WARNING
Do not rely solely upon Terrain Proximity data for terrain avoidance. Terrain Proximity is not a certified terrain awareness system. It is an aid to situational awareness only. Using Terrain Proximity data does not under any circumstances or conditions relieve the pilot’s responsibility to see and avoid terrain or obstacles.

WARNING
Always refer to current aeronautical charts and NOTAMs for verification of displayed aeronautical information. Displayed aeronautical data may not incorporate the latest NOTAM information.

WARNING
Never use GPS altitude for vertical navigation. The altitude calculated by GPS receivers is geometric height above Mean Sea Level and could vary significantly from the altitude displayed by pressure altimeters (e.g., the output from the GDC 74A/B air data computer) or other altimeters in the aircraft. Always refer to the pressure altimeters in the aircraft for current pressure altitude.

WARNING
Never use expired databases. Update databases regularly to ensure currency. Use out of date database information at your own risk.

WARNING
Never use basemap information (land and water data) as the sole means of navigation. Basemap data is intended only to supplement other approved navigation data sources and should be considered only an aid to enhance situational awareness.

WARNING
Do not rely solely upon the display of traffic information to accurately depict all of the traffic within range of the aircraft. Due to lack of equipment, poor signal reception, and/or inaccurate information from aircraft or ground stations, traffic may be present that is not represented on the display.
**WARNING**

Never use datalink weather information for maneuvering in, near, or around areas of hazardous weather. Information contained within datalink weather products may not accurately depict current weather conditions.

**WARNING**

Do not use the indicated datalink weather product age to determine the age of the weather information shown by the datalink weather product. Due to time delays inherent in gathering and processing weather data for datalink transmission, the weather information shown by the datalink weather product may be older than the indicated weather product age.

**WARNING**

Do not rely solely upon Datalink services to provide TFR information. Always confirm TFR information through official sources such as flight service stations or air traffic control.

**WARNING**

Always refer to current aeronautical charts for appropriate minimum clearance altitudes. The displayed MSAs are only advisory in nature and should not be relied upon as the sole source of obstacle and terrain avoidance information.

**WARNING**

Do not use GPS to navigate to any active waypoint identified as a “NON WGS84 WPT” by a system message. “NON WGS84 WPT” waypoints are derived from an unknown map reference datum that may be incompatible with the map reference datum used by GPS (known as WGS84) and may be positioned in error as displayed.

**WARNING**

Do not rely solely upon the display of traffic information for collision avoidance maneuvering. The traffic display does not provide collision avoidance resolution advisories and does not under any circumstances or conditions relieve the pilot’s responsibility to see and avoid other aircraft.

**WARNING**

Do not rely on the accuracy of attitude and heading indications in geographic areas where variation in the earth’s magnetic field exists. This includes: North of 72° North latitude at all longitudes; South of 70° South latitude at all longitudes; North of 65° North latitude between longitude 75° W. and 120° W. (Northern Canada); North of 70° North latitude between longitude 70° W. and 128° W. (Northern Canada); North of 70° North latitude between longitude 85° E. and 114° E. (Northern Russia); South of 55° South latitude between longitude 120° E. and 165° E. (Region south of Australia and New Zealand).
**WARNING**  
*Do not learn operational procedures in the air. For safety reasons, thoroughly practice basic operation on the ground before actual use.*

**WARNING**  
*Review and understand all aspects of this pilot’s guide. Doing so reduces the risk of unsafe operation.*

**WARNING**  
*Always resolve any discrepancies between the display and other navigation sources when they occur. During flight operations, compare display indications to information from other NAVAIDs, visual sightings, charts, and other available sources before continuing navigation.*

**CAUTION**  
*Do not clean display surfaces with abrasive cloths or cleaners containing ammonia. They will harm the anti-reflective coating.*

**CAUTION**  
*Ensure that any unit Repairs are made by an authorized Garmin service center. Unauthorized repairs or modifications could void both the warranty and affect the airworthiness of the aircraft.*

**NOTE**  
The application supports channel tuning for both 8.33 kHz and 25 kHz channels within radio-frequency range. If flying in a region where 8.33 kHz channel spacing is available, set the COM radio to 8.33 kHz to prevent the loss of any stored or recently used frequencies.

**NOTE**  
*All visual depictions contained within this document, including screen images of the system panel and displays, are subject to change and may not reflect the most current system and aviation databases. Depictions of equipment may differ slightly from the actual equipment.*

**NOTE**  
The United States government operates the Global Positioning System and is solely responsible for its accuracy and maintenance. The GPS system is subject to changes which could affect the accuracy and performance of all GPS equipment. Portions of the system utilize GPS as a precision electronic NAVAID. Therefore, as with all NAVAIDs, information presented by the system can be misused or misinterpreted and, therefore, become unsafe.
Warnings, Cautions, and Notes

NOTE
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE
Interference from GPS repeaters operating inside nearby hangars can cause an intermittent loss of attitude and heading displays while the aircraft is on the ground. Moving the aircraft more than 100 yards away from the source of the interference should alleviate the condition.

NOTE
Use of polarized eye wear may cause the flight displays to appear dim or blank.

NOTE
This product, its packaging, and its components contain chemicals known to the State of California to cause cancer, birth defects, or reproductive harm. This notice is being provided in accordance with California’s Proposition 65. If you have any questions or would like additional information, please refer to our website at www.garmin.com/prop65.

NOTE
Operating the system in the vicinity of metal buildings, metal structures, or electromagnetic fields can cause sensor differences that may result in nuisance miscompare annunciations during start up, shut down, or while taxiing. If one or more of the sensed values are unavailable, the annunciation indicates no comparison is possible.

NOTE
The system responds to a terminal procedure based on data coded within that procedure in the Navigation Database. Differences in system operation may be observed among similar types of procedures due to differences in the Navigation Database coding specific to each procedure.

NOTE
Do not use SafeTaxi functions as the basis for ground maneuvering. SafeTaxi functions do not comply with the requirements of AC 120-76C and are not qualified for use as an airport moving map display. SafeTaxi is to be used for orientation purposes only.
NOTE

The FAA has asked Garmin to remind pilots who fly with Garmin database-dependent avionics of the following:

- It is the pilot’s responsibility to remain familiar with all FAA regulatory and advisory guidance and information related to the use of databases in the National Airspace System.
- Garmin equipment will only recognize and use databases that are obtained from Garmin or Jeppesen. Databases obtained from Garmin or Jeppesen that have a Type 2 LOA from the FAA are assured compliance with all data quality requirements (DQRs). A copy of the Type 2 LOA is available for each applicable database and can be viewed at flyGarmin.com by selecting “Aviation Database Declarations.”
- Use of a current Garmin or Jeppesen database in your Garmin equipment is required for compliance with established FAA regulatory guidance, but does not constitute authorization to fly any and all terminal procedures that may be presented by the system. It is the pilot’s responsibility to operate in accordance with established AFM(S) and regulatory guidance or limitations as applicable to the pilot, the aircraft, and installed equipment.

NOTE

The pilot/operator must review and be familiar with Garmin’s database exclusion list as discussed in SAIB CE-14-04 to determine what data may be incomplete. The database exclusion list can be viewed at flyGarmin.com by selecting “Aviation Database Declarations.”

NOTE

The pilot/operator must have access to Garmin and Jeppesen database alerts and consider their impact on the intended aircraft operation. The database alerts can be viewed at flyGarmin.com by selecting “Aviation Database Alerts.”

NOTE

If the pilot/operator wants or needs to adjust the database, contact Garmin Product Support.

NOTE

Garmin requests the flight crew report any observed discrepancies related to database information. These discrepancies could come in the form of an incorrect procedure; incorrectly identified terrain, obstacles and fixes; or any other displayed item used for navigation or communication in the air or on the ground. Visit flyGarmin.com and select “Aviation Data Error Report.”

NOTE

The navigation databases used in Garmin navigation systems contain Special Procedures. Prior to flying these procedures, pilots must have specific FAA authorization, training, and possession of the corresponding current, and legitimately-sourced chart (approach plate, etc.). Inclusion of the Special Procedure in the navigation database DOES NOT imply specific FAA authorization to fly the procedure.

The design and layout of this guide is intended to provide clear, concise sections written in the logical order of a pilot’s flight instrument and systems scan.

Electronic Document Features

Versions of this guide are saved in Adobe Acrobat and are available for download at: [garmin.com/manuals](http://garmin.com/manuals)

Product Descriptions

This guide covers the operation of the following Garmin products.

- GPS 175
- GNC 355
- GNC 355A
- GNX 375

When you see product names separated by a forward slash (e.g., GNC 355/355A or GPS 175/GNX 375), it means that the information pertains to both products. When you see a product name in bold (e.g., **GNC 355A**), it means that the information pertains to that specific model only.

Unless otherwise stated, information pertaining to GNC 355 is also applicable to GNC 355A.

OVERVIEW........................................................................................................................................1-2
PILOT INTERFACE.........................................................................................................................1-5
COMPATIBLE EQUIPMENT..............................................................................................................1-17
Overview

GPS 175, GNC 355/355A, and GNX 375 are the first 2” by 6.25” panel mount navigators to employ full color capacitive touchscreen technology.

GPS 175 is a TSO-C146e compliant GPS/WAAS navigator with en route, terminal, and precision/non-precision approach capabilities.

GNC 355/355A combines the functionality of the GPS 175 with a TSO-C169a compliant VHF radio communications transceiver. The GNC 355 supports 25 kHz channel spacing, while the GNC 355A provides tuning for both 25 kHz and 8.33 kHz channels.

Both GPS 175 and GNC 355 can receive ADS-B In weather and traffic when interfaced to a GTX 345 or GDL 88.

GNX 375 combines the functionality of the GPS 175 with a TSO-C112e (Level 2els, Class 1) compliant mode S transponder that meets ADS-B Out requirements. A dual-link ADS-B In receiver provides the display of traffic and subscription-free weather.

Each unit is compatible with Bluetooth® wireless technology, providing flight plan, traffic, weather, and position data to an available portable electronic device.

[1] Requires external ADS-B In product.
[2] ADS-B In via 1090 MHz (traffic) and 978 MHz UAT (traffic and weather).
Pilot Interface

Bezel

1. **Bezel**
   Includes the power key, mechanical knobs, photocell, and SD card slot. Ledges provide hand stability when performing data entry and making selections.

2. **Touchscreen**
   Multi-touch color display provides controls for unit operation.

3. **Photocell**
   Measures cockpit ambient light level to automatically adjust display brightness for day and night.

4. **SD Card Slot**
   Interface for loading database, exporting log files, and updating software. Compatibility with Flight Stream 510 allows wireless database transfer from the Garmin Pilot app via Database Concierge.

5. **Power/Home Key**
   Powers the unit on or off and provides direct access to the Home page.

6. **Inner & Outer Knobs**
   Multipurpose dual concentric knob allows data entry, list scrolling, map range control, page navigation, and COM volume and frequency tuning. [1]

[1] COM is a function of GNC 355/355A only.
SD Card Slot

NOTE
Do not remove or insert an SD card while in flight. Always verify the system is powered off before inserting or removing an SD card.

FEATURE REQUIREMENTS
• SD card in the FAT32 format, with memory capacity between 8 GB and 32 GB

The navigator requires an SD card for the following tasks.
• Exporting data logs
• Capturing screen images
• Upgrading software
• Saving system configurations
• Enabling Flight Stream connectivity
• Updating databases

INSERT AN SD CARD
When inserting an SD card:
1. Verify unit power is off and the slot is empty.
2. Hold card such that label faces left edge of display screen.
3. Ensure back edge of card is flush with display bezel after insertion.

EJECT AN SD CARD
1. Power off the unit.
2. Release the spring latch by pressing lightly on exposed edge of card.
Touchscreen

GESTURES

TAP

Touching the screen briefly with a single finger.
Use this gesture for:
• Opening a page or menu
• Activating a command key or data entry field
• Displaying map feature information
• Selecting an option within an application

TAP AND HOLD

Certain momentary controls (e.g., directional arrow keys) provide a secondary tap and hold function. Tap the key and hold your finger in place until the desired action occurs.
Use this gesture for:
• Scrolling with arrow keys
• Increasing/decreasing values continuously

SWIPE

A smooth motion that involves touching an object, then sliding your finger across the screen and lifting up.
Use this gesture for:
• Accessing multiple panes (right or left swipes)
• Viewing and scrolling lists
• Panning across a map display

FLICK

Swiping the screen in a quick upward or downward motion. Information moves at a fast speed (faster than if holding the arrow key), then slows to a stop.
Use this gesture for:
• Scrolling an item list

PINCH & STRETCH

Touch any map with two fingers at the same time, then bring the fingers close together (pinch) or spread them apart (stretch). Just remember: stretch to zoom in and pinch to zoom out.
Use this gesture for:
• Magnifying map features
System at a Glance

Keys

COMMON COMMANDS

- **MSG**
  - Open the system messages list. A flashing icon indicates unread messages.
  - Cancel an active function without inputting data.

- **Menu**
  - Open a context menu.
  - Input a specified value.

- **Back**
  - Return to the previous page.
  - Select the corresponding item (e.g., database update). A checkmark confirms selection.

FUNCTION KEYS

- **OBST/Wires**
  - On
  - Off
  - Toggle keys turn a specific function on or off. The current state of the function is indicated below the key label.

APP ICONS

Tapping one of these icons opens the corresponding application. Some apps provide additional icons for accessing functions on subpages (e.g., Utilities, System).
Menus

Menus group related controls into an expandable pane, allowing access to multiple functions on a single page. Depending on the number of available functions, a menu may comprise more than one pane.

Multiple panes are accessible by way of a left/right swipe or inner knob turn.

Toggle keys either enable or disable list items. In some cases, Settings or Range keys provide access to selectable setting options.

An indicator at the bottom of the menu shows which pane is active.

POP-UP MENUS

Pop-up menus open to the default or previously selected value.

Underlying Page Hidden

Default or Current Setting

LISTS

Scrollable lists group control keys related to a single function (e.g., FIS-B Weather). When scrolling, all keys in the list are inactive.

Scroll Bar
System at a Glance

Tabs
Tabs group information into individual panes. Content includes scrolling lists, data fields, function keys, or a combination of controls.
Tabs are located along the left and right sides of a pane.

Keypads
The navigator employs multiple keypad types to serve specific settings and functions.

NUMERIC
Numeric keypads open on a single pane.
Backspace and Enter keys always appear at the right of the screen.

ALPHANUMERIC
Alphanumeric keypads comprise multiple keysets that are accessible by way of swipe or key selection.

An indicator shows which keyset is active.
Keys a through m are active by default.
Control Knobs

Inner and outer control knobs offer an alternative method for selecting and modifying data without the use of touch keys.

</tbody>
</table>
**System at a Glance**

**Page Navigation Labels**
A locator bar works in conjunction with the outer knob, providing quick access to the indicated page. Turning the outer knob clockwise or counter-clockwise moves the locator through the available shortcut options.

Slot 1 is a dedicated Map shortcut. Slots 2 and 3 are customizable. Selectable page options are dependent upon configuration.

A cyan background and border indicate active page and available shortcuts.

**Knob Function Indicators**
Icons to the right of the bar indicate available knob functions. Indications include, but are not limited to, the following.

**GPS 175 & GNX 375**

- **Map Active**
  - Available functions:
    - Map zoom
    - Toggle user fields on or off

- **Flight Plan Active**
  - Available functions:
    - Flight plan scrolling

- **Home Page Active**
  - Available functions:
    - Page shortcut navigation
    - Access Direct To window

- **Direct To Window Active**
  - Available functions:
    - Direct-to waypoint editing
    - Activate direct-to course
GNC 355/GNC355A
Knob focus defaults to page navigation when not in use.

**Map Active**

Available functions:
- Map zoom
- Set knob focus to standby frequency

**Flight Plan Active**

Available functions:
- Flight plan scrolling
- Set knob focus to standby frequency

**STBY Frequency Tuning Active (via Knob Push)**

**Tune Freq** - **Push VOL**

Available functions:
- Frequency tuning
- Activate volume control

**COM Volume Page Active (via VOL Key)**

**Adjust Volume**

Available functions:
- Volume adjustment

**Knob Shortcuts**

For convenience, the unit allows you to access certain controls quickly via knob push.

**GPS 175/GNX 375**

From the Home page:

Pushing once opens the Direct To window. After a waypoint/fix is selected, pushing the knob again activates the direct-to fix.
**GNC 355/355A**

*From most pages:*

Pushing once enables standby frequency tuning mode and opens the COM volume controls. Turn the inner and outer knobs to tune the standby frequency.

Pushing twice sets the knob focus to the volume slider. Turn the inner and outer knobs to adjust the volume percentage.

Pushing again closes the menu and returns to the previous view.

A cyan border indicates changes in knob focus. This is useful when transitioning through the different control modes: page navigation > STBY frequency tuning > COM radio volume adjustment > page navigation.
Screen Captures

FEATURE REQUIREMENTS
• SD card in the FAT32 format, with memory capacity between 8 GB and 32 GB

FEATURE LIMITATIONS
• Not available with Flight Stream 510

Save images to an SD card at any time using a screen capture. Images automatically save to the “print” folder in the SD card root directory.

1. Insert an SD card into the card slot.
2. Push and hold the control knob.
3. With knob depressed, push and release the Home/Power key.

A camera icon momentarily shows in the annunciator bar indicating a successful screen capture.

To view saved images, remove the SD card and open the “print” folder on a computer.

</tbody>
</table>

The system consists of multiple LRUs, which are installed behind the instrument panel or in a separate avionics bay. Their modular design aids system maintenance and unit replacement.

Optional LRUs may include compatible equipment from either Garmin or a third party manufacturer.

ADC & AHRS

AHRS units have a magnetometer interface for determining magnetic heading. ADC units have a Pitot-static interface for measuring pressure altitude.

<table>

Get Started

Power Up

The unit receives power directly from the aircraft’s electrical system. Upon power-up, the bezel key backlight momentarily illuminates. System failure annunciations typically disappear within the first 30 seconds after power-up.

The start-up screen presents the unit software versions, the name and status of all installed databases, and the Database Updates page access key. These features are available only at power up.

Tapping Continue advances to the Instrument Test page.

If an instrument remains flagged after one minute, check the status of the associated LRU, then contact a Garmin dealer for support.

Instrument Test

To ensure safe operation, continuous built-in test features exercise the unit’s processor, memory, external inputs, and outputs. The Instrument Test page displays the results of all external equipment checks performed by the unit.

<table>
<thead>

<td>Out of View</td>
<td>Half Up</td>
<td>Out of View</td>
</tr>
</tbody>
</table>

Review this list to ensure that all CDI outputs and other displayed data are correct for the connected equipment.

Power Off

⚠️ WARNING

Never attempt to power off the unit while airborne unless operational procedures dictate.

Pushing and holding the Power key for 0.5 seconds initiates the power off sequence. Shutdown occurs once the timer reaches zero. Power off annunciation temporarily replaces the knob function indicator.
Databases

**NOTE**

The navigator supports SD cards in the FAT32 format only, with capacities ranging between 8 GB and 32 GB.

Databases are stored in the unit’s internal memory. To view update cycles, or to purchase individual databases or database packages, go to [flyGarmin.com](http://flyGarmin.com).

There are two methods for loading and updating databases. Do not attempt either of these while in flight (on ground only).

- **Load databases via SD card.** Once loading completes, you may power off the unit and remove the card.
- **Transfer databases from a Flight Stream 510 wireless datacard.** This method requires the Garmin Pilot app on a portable electronic device.

### SUPPORTED DATABASES

<table>
<thead>
<tr>
<th>Database</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basemap</td>
<td>Bodies of water, geopolitical boundary, and road information</td>
</tr>
<tr>
<td>Navigation</td>
<td>Airport, NAVAID, waypoint, and airspace information (Garmin or Jeppesen)</td>
</tr>
<tr>
<td>Obstacles</td>
<td>Obstacle and wire data</td>
</tr>
<tr>
<td>SafeTaxi</td>
<td>Airport surface diagrams</td>
</tr>
<tr>
<td>Terrain</td>
<td>Terrain elevation data</td>
</tr>
</tbody>
</table>

### Overwriting SD card database files

When database files are loaded to the SD card, any previously loaded database files of the same type residing on the SD card will be overwritten. This includes loading a database of a different coverage area or data cycle than that currently residing on the SD card.

For information regarding third party navigation databases, go to [jeppesen.com](http://jeppesen.com).
Get Started

Database Effective Cycles
Most databases expire at regular intervals. Exceptions include Basemap and Terrain, which neither expire nor update on a regular schedule.

The start-up page lists all currently installed databases. Review this list for current database types, cycle numbers, and expiration dates.

Yellow text denotes when a database is:
- Not available
- Installed before its effective date
- Missing date information
- Past its expiration date

DATABASE EFFECTIVE STATUS

**Databases with no effective date**
- Effective upon release
- Transfer occurs prior to database verification at system start-up
- No automatic transfer if Flight Stream 510 is present
- Includes Basemap and Terrain
- No pilot confirmation or restart required

**Databases with specified effective dates**
- Effective during a specific period
- Unit determines database status using the current date and time from GPS
- Automatic activation occurs on the effective date

DATABASE NOT FOUND
Notifications for databases not present or available also display in the form of system messages.

Tapping Database Info opens the Active Database Information page.
Review this list to determine the status of the indicated database.

Database Not Present
Active and Standby Databases

The navigator uses two types of databases: active and standby. Active databases are in use by the system. Standby databases have not reached the effective date.

During normal operation, information about all active and standby databases are viewable on the associated info page.

From the Home page, tap **System > System Status > Select Active or Standby.**

<table>
<thead>
<tr>
<th>DB INFO PAGE</th>
<th>DISPLAYS</th>
</tr>
</thead>
</table>
| Active       | • Information about databases currently in use  
|              | • **View Copyrights** key  
| Standby      | • Information about databases that are not yet effective |

The Standby DB Info page notifies when no standby databases are available.

**VIEW COPYRIGHTS**

Tapping this key displays copyright information for all installed databases.
Get Started

Manual Updates

FEATURE LIMITATIONS
The Database Updates page is available only when:

- The aircraft is on ground
- The start-up page is active (i.e., during power up)

Database Updates Page

This page presents a list of all available databases. To open, tap the **Databases** key on the start-up page.

DATABASE SOURCE INDICATION

A Connext icon indicates when a database is from Garmin Pilot via wireless transfer.

No indication means the database is either from an SD card or the unit’s internal standby queue.
SELECT ALL DATABASES

Select individual databases for transfer, or choose Select All if all listed databases require updating.

Basemap and Terrain update automatically and require no action.

After all selections are made, initiate the update process by tapping Start.

By default, this page displays only the databases recommended for update.

A message notifies when no such databases are available.

The unit automatically restarts once all updates are complete.

SHOW ALL DATABASES

Tapping Show All displays a complete list of all databases.

This list may include databases that are:

- Not yet effective
- Older than the currently active database(s)
- Unable to update due to an error
ERROR INFORMATION

To determine the cause of a database error, tap Error Info.

An information window provides details regarding the state of the database.

SELECT REGION

This key appears when two databases are of the same type and cycle, but pertain to different regions.

To specify a database region, tap Select Region, then select the appropriate menu option.
Get Started

Automatic Updates

**Automatic updates occur when:**

- A newer database is detected on the SD card or in the internal standby queue
- A newer database is within its effective dates
- The aircraft is on ground

When a newer database is available, follow the on-screen prompts to complete the update process.

A status page displays a progress bar and the name of each database as it uploads to the unit. Terrain databases may require up to 5 minutes for transfer. Total transfer time depends on the SD card type.

The unit automatically restarts once the update is complete. The update is indicated in the list of currently installed databases.

**INSTALL OR UPDATE A DATABASE USING AN SD CARD**

1. Download a database onto an SD card.
2. Insert the SD card with the most recent database(s) into the card slot.
3. Power on the unit.

Selecting **Update** opens the DB Updates page, where a list of the newest databases is available for review.

All newer databases (effective and expired) transfer from the SD card to the internal standby queue.

**BASEMAP AND TERRAIN UPDATES**

These databases automatically transfer from an SD card without any prompting or progress indications. They do not require pilot confirmation or a unit restart.
Database Concierge

FEATURE REQUIREMENTS

- Flight Stream 510 wireless datacard
- Garmin Pilot app on a mobile device
- The aircraft is on ground

Database Concierge allows wireless transfer of databases from a mobile device while the aircraft is on ground.

A pilot selects and downloads databases inside the Garmin Pilot app. Transfers occur once Flight Stream 510 establishes a wireless connection inside the aircraft.

Database Concierge Transfer Function

- Provides automatic updates for databases with effective dates
- Preloads databases that are not yet effective by placing them in the internal standby queue
- Displays database type, cycle, effective date, and transfer progress
- Allows manual operation via Start key
- Requires pilot confirmation

TRANSFER A DATABASE USING DATABASE CONCIERGE

1. Purchase database(s) from flyGarmin.com.
2. Open Garmin Pilot and follow the download instructions.
3. Install Flight Stream 510 and then power on unit.
4. Connect to Wi-Fi.
5. Follow the on screen prompts.
Get Started

The unit activates any databases that completed transfer before the interruption. Previously selected databases on an SD card or in the internal standby update as well. The message “Transfers interrupted” displays if no databases are available.

Database Concierge transfers databases from the app to Flight Stream 510.
A progress bar shows when this process is complete.

Database Transfer Status

Database Updates
Databases – 2 of 4
Obstacle Database – 69%

Database Update Status

Tapping Skip cancels any unfinished wireless transfers and initiates the update process.

The unit either updates or preloads databases based on their effective date. A second progress bar indicates upload status. The unit automatically restarts upon database activation.
Get Started

Wi-Fi Setup

Tapping WiFi Info opens an information page. This page is accessible from the Database Update and start-up pages.

Information includes:
- Database Concierge connection status
- Connected device name
- Database update availability and instructions
- Wi-Fi SSID and password

**WI-FI INFO KEY STATUS ANNUNCIATIONS**

Wi-Fi connection status annunciates on the key label when the information page is not active.

- **Offline**
  Flight Stream 510 requires power up.

- **Ready**
  Wi-Fi is active, but the unit is waiting to connect with a device.

- **Open App**
  Connection complete. Flight Stream 510 requires Garmin Pilot to be opened in order for database transfer to commence.

- **Connected**
  Garmin Pilot opened and streaming to unit.

**CONNECT TO WI-FI**

Follow the onscreen prompts when connecting to the Wi-Fi network.

1. Install Flight Stream 510 and then power on unit. Observe Wi-Fi status changes from “Offline” to “Ready.”

2. Tap WiFi Info.

3. Enter the required SSID and password using the provided keypads.

4. Enable Wi-Fi setting on the portable device. Wi-Fi status changes to “Open App” once pairing is complete.
Database SYNC

Database SYNC minimizes database maintenance by synchronizing active and standby databases across all configured LRUs. Once a standby database becomes effective, each LRU automatically generates an update prompt.

FEATURE LIMITATIONS

- Not applicable to Terrain database
- Database SYNC does not support Chart Streaming.

To toggle the feature on and off:

Home > System > System Status > Menu > DB SYNC

Database SYNC Compatibility

The Database SYNC function enables automatic database synchronization across all capable Garmin avionics:

- GPS 175
- GI 275
- GNC 355
- GNX 375
- GDU TXi running software version 3.10 and later (GDU 700( ), GDU 1060) [1]

[1] Receive only. Airport directory and chart databases are not transmitted from GPS 175, GNX 375, or GNC 355.

For information regarding database packages, and individual database purchases, visit flyGarmin.com.

ACTIVE AND STANDBY DATABASES

Database SYNC transfer function includes active and standby databases.

The function prompts a unit restart if a new database is effective and the aircraft is on ground.

To view active or standby databases:

Home > System > System Status > select Active or Standby
Connectivity

Connext works via the Bluetooth data link to provide up-to-date, wireless information throughout the cockpit.

FEATURE LIMITATIONS

- Unit allows pairing of up to 13 Bluetooth enabled devices, with two simultaneous device connections
- Auto reconnect function is not available for Android devices

Connext Setup

The Connext interface allows communication with Garmin Pilot from a portable electronic device.

Connext Features

The following features are available on your portable electronic device.

- GPS position and velocity information
- Uncorrected barometric pressure altitude used by transponder and ADS-B [1]
- ADS-B In traffic data [2]
- FIS-B weather and flight information [2]
- AHRS data from built-in sensor [3] [4]

[1] GNX 375 only.
[2] GNX 375, or GPS 175 and GNC 355 with external ADS-B In source.
[4] The internal AHRS sensor is only for use with a portable electronic device. All internal AHRS functions are automatic and do not require pilot action.
Bluetooth Setup

Bluetooth Wireless Features

- FIS-B weather [1]
- ADS-B traffic [1]
- GPS/WAAS position, velocity, and time
- Pressure altitude
- AHRS
- Magnetic heading
- Flight plan transfer

[1] GNX 375, or GPS 175/GNC 355 with external ADS-B In source.

The unit supports wireless pairing with up to 13 portable electronic devices via the Garmin Pilot app.

Bluetooth device management options reside on the Devices page. Opening this page automatically initiates device pairing.

Device information and pairing mode status display on the Connext page.

Enabling Bluetooth Functionality

Tapping Bluetooth Enabled toggles Bluetooth wireless functionality on or off.

All associated setting controls and features are unavailable when this function is inactive.

DEVICE NAME

This key allows you to enter the name of the Bluetooth enabled device. Use the keypad or control knobs to enter the device name.
Get Started

Managing Paired Devices

To view a list of all paired devices and their connection status, tap **Paired Devices**.
To enable automatic connection between the unit and a paired device at power up, tap **Auto Reconnect**.

**AUTO RECONNECT**
Enables automatic connection between the unit and the paired device when the two are within range.

**REMOVE**
Removing a device from the list means it is no longer paired with the unit. This action requires pilot confirmation.
Be sure to remove pairing on both devices before attempting to pair them again.

**CONNECTION STATUS**

The device is configured and communicating properly.

The device is not available and is not configured or it is not communicating properly.
Importing a Flight Plan

This feature allows the automatic import of flight plans via Bluetooth wireless technology.

It may be necessary to turn this function off if a portable device application makes repeated erroneous attempts to send flight plans to the unit.

Once transfer is complete, an advisory message informs that a new flight plan is available for preview.

To view the flight plan, acknowledge the advisory and tap Preview.
VHF COM transceiver controls are accessible via the selectable standby (STBY) frequency window. This control resides in the upper right corner of the display.

1. Active Frequency Window
2. Standby Frequency Window
3. Frequency Entry Field
4. Monitor Key
5. Transfer (Flip-Flop) Key
6. COM Volume Access Key
7. Data Entry Keys

From the COM Standby control panel you can:
- Specify a standby frequency
- Swap active and standby frequency values
- Enable monitor mode
- Access radio volume controls
COM Volume Controls

Adjust radio volume according to your preference. Directional keys allow volume adjustments. A cyan border indicates current knob focus. The unit retains volume settings over power cycles.

Access volume controls by tapping the VOL indicator key on the COM Standby control panel, or using the control knob as described below.

For convenience, COM volume functions are accessible from most pages via inner knob push.
- Pushing once opens the COM Volume controls menu.
- Pushing twice sets the knob focus to the volume slider. Turn the inner and outer knobs to adjust the volume percentage.
- Pushing again closes the menu and returns to the previous view.
Get Started

OPEN SQUELCH

Tap once to override the automatic squelch function. Tap again to return the squelch to automatic operation.

“SQ” annunciates in the COM active frequency window to show when the squelch is overridden (i.e., when the squelch is open).

The Open Squelch function is accessible from the COM Volume page and slide-out menu.

The automatic squelch function rejects many localized noise sources. Overriding this function may be helpful when listening to a distant station or setting the volume level.
COM Radio Setup

COM radio customization options reside in the System Setup app.

Setup options for GNC 355A shown as typical.

For COM radio selections, swipe to the end of the menu.

From here you can:
- Set transceiver channel spacing [1]
- Enable reverse frequency look-up functionality
- Adjust sidetone volume offset

[1] GNC 355A only.
Get Started

Channel Spacing Option

AVAILABLE WITH: GNC 355A

The GNC 355A supports channel tuning for both 8.33 kHz and 25 kHz channels within radio-frequency range. The GNC 355 supports frequency-channel pairings for 25 kHz channels only.

8.33 kHz step configuration is available for European operations.
On GNC 355A, channel spacing is set to 8.33 kHz by default.

Tapping this key toggles the transceiver channel spacing between 8.33 kHz and 25.0 kHz.

8.33 kHz

![Image of 8.33 kHz channel configuration]

124.555
119.105

25.0 kHz

COM radio operates in the aviation voice band, between 118.000 and 136.975 MHz, in 25.0 kHz steps.

If flying in a region where 8.33 kHz channel spacing is available, set the COM radio to 8.33 kHz to prevent the loss of any stored or recently used frequencies.
Reverse Frequency Look-up

FEATURE REQUIREMENTS
• Valid position data
• Active navigation database

FEATURE LIMITATIONS
• Available only for the nearest stations in the database

Display the facility identifier and frequency type for active and standby frequencies.
The unit verifies the displayed frequency against the database at least once per minute.

When frequency look-up is active, COM displays:
• Nearest facility identifier (if available)
• Multiple facility indication (if more than one)
• Frequency type
• Approach or Departure indications (if applicable)

When flying between airports that use the same frequency, it may take up to 2 minutes for look-up information to change after crossing the half way point.
Get Started

Sidetone Volume Offset

FEATURE LIMITATIONS
- Availability dependent upon configuration
- Offset range: +/-10% of total COM audio volume range

To adjust the offset from the COM receiver volume:
1. Enable Link to COM VOL.
2. Tap Offset and adjust as necessary.

To adjust the offset from the configured sidetone volume, disable Link to COM VOL and then adjust the offset as necessary. These adjustments are fixed as they are relative to the configured sidetone volume.

If the unit is wired for audio output, set the sidetone volume offset to the preferred level. By default, the offset value is set to zero. The unit retains manual offset settings over power cycles.

COM sidetone is audio spoken into the microphone that is played back in real time over the headset. The offset setting determines sidetone volume for the COM during radio transmission. Adjustments determine the amount that the sidetone volume level is offset from the COM receiver volume or the configured sidetone volume.

LINK TO COM VOLUME

Enabling this function allows you to adjust the amount that the sidetone volume level is offset from the COM receiver volume. These adjustments are dynamic in that they vary with the COM receiver volume level.
Tuning & Monitoring

Communication frequencies are split between two selectable windows:

The upper window presents the active COM radio frequency. This is the frequency currently in use for transmit and receive operations.

The lower window presents the standby radio frequency. This frequency may be set and activated at any time.

COM STATUS INDICATIONS

Status annunciations denote active functions, modes, and frequency types.

- **Transmitting**
- **Receiving transmission**
- **Monitor mode active**
- **Automatic squelch is overridden (i.e., squelch is open)**
- **Reverse frequency information (sample text)**
Direct Tuning

You may enter a standby frequency using the data entry keys on the COM Standby control panel or by pressing and turning the control knob.

Tapping **STBY** opens the control panel. From here you may specify a frequency or select one using the provided search options.

The current standby frequency value displays in the direct tuning field.

**DATA ENTRY KEYS**

Enter a new standby frequency using the provided data entry keys or by turning and pushing the control knob.

To cancel the entry and exit the control panel, tap **Back**.

Entering the new frequency value places it in standby.

**FREQUENCY AUTOFILL**

Numeric characters autofill the first valid frequency value based on each selected digit.

Autofill characters are muted and display from the cursor position to the right of the field.

Selecting a digit that is not valid for the cursor location results in no entry.
KNOB TUNING

The control knob allows you to enter a standby frequency without opening the control panel.

Attempting to enter a frequency value after selecting an invalid digit generates a pop-up message. Confirm the request by selecting **OK**.

**Simplified Frequency Entry**

The direct tuning field allows you the option of entering frequencies without typing the leading and/or trailing digits. For example:

To enter frequency 121.50, you need only tap **2**, **1**, and **5**. The field autofills the leading “1” and trailing “0.”

Pushing the control knob once activates frequency entry mode. The STBY window turns cyan to show it is active.

If no action occurs after 3 seconds, a cyan border appears around the window. This indicates that the function will be deselected in 10 seconds.

After 10 seconds, the window returns to an inactive state.
Transfer Frequency to Active (Flip-Flop)

Before

After

The transfer (or *flip-flop*) function allows you to swap the active and standby frequency values. This function is accessible multiple ways.

**COM ACTIVE FREQUENCY WINDOW**

Tapping this window swaps the active frequency value with the standby frequency displayed in the lower window. Tap once to swap the displayed frequency values. Tap again to swap them back.

A transfer icon indicates that flip-flop functionality is available.

**XFER KEY**

Tapping this key on the COM Standby control panel performs the same function as tapping the COM active frequency window.

**CONTROL KNOB**

Pushing and holding the control knob for 0.5 seconds automatically flip-flops the active and standby frequency values.

- “Hold for flip-flop” control label appears in the annunciator bar
- Standby and active COM frequency values swap

Hold for flip-flop
Frequency Autofill & Transfer

If you initiate a transfer before completing frequency entry, the direct tuning field autofills the remaining characters, enters the frequency into the standby field, and then swaps it with the active frequency.

Monitor Mode

Enabling monitor mode allows you to listen to the standby frequency while the unit continues monitoring the active COM channel.

When the COM active frequency receives a signal, the unit automatically switches back to the active frequency. Once activity on the COM active channel ceases, the unit returns to listening to the standby frequency.

Monitor mode is useful when you want to listen to a recorded broadcast (e.g., ATIS) on the standby channel, but still receive control tower transmissions on the active channel.
Get Started

Frequency Selection
The unit provides multiple options for finding and selecting a standby frequency from the available database frequencies.

Search Tabs
The Find key provides access to multiple search tabs. Each tab displays a list of selectable identifiers based on specific criteria.

<table>
<thead>
<tr>
<th>Nearest Airports</th>
<th>Lists up to 25 airports within a 200 nm radius</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nearest FSS &amp; ARTCC</td>
<td>List the distance, bearing, and frequency associated with the specified facility name</td>
</tr>
<tr>
<td>Recent</td>
<td>Lists up to 20 of the most recently tuned frequencies</td>
</tr>
<tr>
<td>Flight Plan</td>
<td>Lists all frequencies contained in the active flight plan</td>
</tr>
<tr>
<td>User</td>
<td>Lists up to 15 user-defined frequencies</td>
</tr>
</tbody>
</table>
## TAB ENTRIES

<table>
<thead>
<tr>
<th>Waypoint Identifier</th>
<th>Bearing &amp; Distance</th>
<th>Frequency Key</th>
</tr>
</thead>
<tbody>
<tr>
<td>KSLE McNary</td>
<td>5.4 NM 166°</td>
<td>121.90 GROUND</td>
</tr>
</tbody>
</table>

Each entry includes general information about the associated waypoint.

## MULTIPLE FREQUENCIES

This key appears when more than one frequency is available at the indicated identifier.

Applicable to functions displaying information only (Nearest Airports, FSS, and ARTCC).

Tap **Multiple FREQ** and select a frequency from associated pop-up.
Get Started

Remote Frequency Selection

FEATURE LIMITATIONS
- Availability dependent upon configuration

On units configured for remote frequency recall, user frequencies are selectable via a remote switch.
- Pressing the switch once loads the next user frequency into the STBY window
- Pressing the switch repeatedly scrolls through the list of presets
- Some installations may have two dedicated recall switches: one to scroll up, one to scroll down
- Selections do not activate until transferred to active

Emergency Frequency

This function provides a quick method for remotely tuning the emergency frequency (121.50 MHz). This feature is available any time the unit is on, regardless of GPS or display status.

Remote COM Lock

If configured, pressing and holding the remote COM transfer key for two seconds locks the COM at 121.50 MHz, preventing further changes in frequency. A message informs of the change in status. To unlock, press and hold the remote key again.

If the radio loses communication with the system, the unit automatically tunes to 121.50 MHz for transmit and receive operations, regardless of the displayed frequency.
Get Started

Create User Frequencies

FEATURE LIMITATIONS
• Names may be up to seven characters in length
• Maximum number of 15 user frequencies

Create or edit user frequencies from the Edit Frequency pop-up menu.

Edit Frequency

Name
Type name

Frequency
Specify Frequency

Save

Delete
Appears only for existing entries.

<table>
<thead>
<tr>
<th>Name</th>
<th>• Assign the frequency a unique identifier.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frequency</td>
<td>• Specify a frequency value.</td>
</tr>
<tr>
<td>Save</td>
<td>• Add the frequency to the user frequency list.</td>
</tr>
<tr>
<td>Delete</td>
<td>• Remove the selected user frequency from the list.</td>
</tr>
<tr>
<td></td>
<td>• Appears only for existing entries.</td>
</tr>
</tbody>
</table>
Get Started

ADD A USER FREQUENCY
From the COM Standby page:
1. Tap **Find** > Select the **User** tab.
2. Tap **Add User Frequency**.
3. Specify the frequency name and value.
4. Tap **Save**.

A pop-up message informs when the user frequency list is full.

EDIT USER FREQUENCY

Tapping the **Edit** key for an existing entry opens the same pop-up. From here you may modify the user frequency name and value.

Tapping **Save** stores all changes.

Tapping **Delete** removes the selected user frequency from the list. A pop-up message requests confirmation.
COM Alert

If the radio fails:

- Red “X” displays over the COM key
- Advisory message alerts
- COM control page is not available

COM radio fail annunciations are designed to be immediately recognizable. If a failure occurs while the control page is active, the display automatically returns to the previous page.

<table>
<thead>
<tr>
<th>UNIT</th>
<th>CONDITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>GNC 355</td>
<td>Invalid COM radio data.</td>
</tr>
<tr>
<td>GNC 355A</td>
<td></td>
</tr>
</tbody>
</table>

For information regarding pilot response to a COM radio failure, consult the AFMS.

Stuck Microphone

The COM transmitter automatically times out after 30 seconds of continuous broadcasting. This may occur when:

- Push-to-talk key on the microphone is stuck or accidentally left in the keyed position
- Push-to-talk function continues to transmit after releasing the key

The advisory message “COM push-to-talk is stuck” alerts for as long as the condition exists.
XPDR Controls are accessible via the XPDR key. This key is unavailable when the control panel is active.

The XPDR key becomes available when you:

- Enter a squawk code
- Open the XPDR menu
- View a message
- Select the Mode key
- Leave the control panel

1. Squawk Code Entry Field
2. VFR Key
3. XPDR Mode Key
4. Squawk Code Entry Keys
5. Data Field
XPDR Setup

Tap Menu to access the transponder setup options. From here you can:

- Change the display of data
- Enable 1090 ES ADS-B Out functionality (if configured)
- Assign a unique flight ID

Displaying Data

Toggles the data field between pressure altitude and flight ID.

Pressure Altitude

Pressure ALT: 2297 FT
Displays the current pressure altitude.

Flight ID

Flight ID: FLY4GA
Displays the active Flight ID. Unless configured, the Flight ID is not editable.
Get Started

Enabling Extended Squitter Transmissions

Tapping **ADS-B Out** allows the transmission of ADS-B Out messages and position information.

Assigning a Flight ID

**FEATURE LIMITATIONS**

- Availability dependent on configuration

If the flight ID is editable, tap **Flight ID** and assign a unique identifier.

Flight IDs are alphanumeric (upper-case only) and have an eight character limit. The active flight ID displays by default.
# XPDR Modes

Tapping **Mode** opens a menu of the available transponder modes. Options include Standby, On, and Altitude Reporting.

<table>
<thead>
<tr>
<th>MODE</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Standby</strong></td>
<td>• Transponder does not reply to interrogations or transmit ADS-B Out</td>
</tr>
<tr>
<td></td>
<td>• Bluetooth wireless functions remain operational</td>
</tr>
<tr>
<td></td>
<td>• Unit continues to receive ADS-B In information, but is not a TIS-B participant</td>
</tr>
<tr>
<td><strong>On</strong></td>
<td>• Transponder replies to interrogations. Replies do not include pressure altitude</td>
</tr>
<tr>
<td></td>
<td>• Reply (R) symbol on the display indicates the transponder is responding</td>
</tr>
<tr>
<td></td>
<td>• Transmitted ADS-B Out does not include pressure altitude</td>
</tr>
<tr>
<td><strong>Altitude Reporting</strong></td>
<td>• Transponder replies to identification and altitude interrogations</td>
</tr>
<tr>
<td></td>
<td>• Reply (R) symbol indicates the transponder is responding</td>
</tr>
<tr>
<td></td>
<td>• Transmitted ADS-B Out includes pressure altitude</td>
</tr>
</tbody>
</table>

During Altitude Reporting mode, all aircraft air/ground state transmissions are handled via the transponder and require no pilot action. Always use this mode while in the air and on the ground, unless otherwise requested by ATC.
Get Started

Squawk Code Keys

<table>
<thead>
<tr>
<th>SPECIAL SQUAWK CODES</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1200  Default VFR code (USA)</td>
<td></td>
</tr>
<tr>
<td>7500     Hijacking</td>
<td></td>
</tr>
<tr>
<td>7600     Loss of communications</td>
<td></td>
</tr>
<tr>
<td>7700     Emergency</td>
<td></td>
</tr>
</tbody>
</table>

Eight squawk code entry keys (0 – 7) provide access to all ATCRBS codes. Tapping one of these keys begins the code selection sequence. Use the Backspace key or outer control knob to move the cursor.

Digits that are not yet entered appear as underscores.

Activate the new code by tapping Enter.

To cancel the code entry and exit the page, tap Cancel.

Active squawk codes remain in use until a new code is entered.

VFR

Tapping this key once sets the squawk code to the preprogrammed VFR code.

This code is factory set to 1200, but may be changed during configuration.

XPDR Key

Tapping the XPDR key activates the IDENT function for 18 seconds. This signal distinguishes the transponder from others on the air traffic controller’s screen.

Tapping this key when another page is active immediately opens the control panel.
TRANSPONDER STATUS INDICATIONS

IDENT

- Reply active
- IDENT function active
- No change to transponder code

Standby Mode

- Standby mode
- Current squawk code (inactive)

IDENT with New Squawk Code

- Reply active
- Transponder code modified

Altitude Reporting Mode

- Altitude reporting mode
- Reply active
- Identify function active
- VFR squawk code (active)

<table>
<thead>
<tr>

<tr>
<td>ALT</td>
<td>Altitude Reporting</td>
</tr>
<tr>
<td>STBY</td>
<td>Standby</td>
</tr>
<tr>
<td>IDENT</td>
<td>Tap to initiate the IDENT function (code unmodified)</td>
</tr>
<tr>
<td>ENT+ID</td>
<td>Tap to accept modified code and initiate IDENT function</td>
</tr>
</tbody>
</table>
Remote Control

Transponder functions are controllable from a connected G3X Touch display. Control features include:

- Squawk code
- IDENT
- Flight ID
- Transponder mode
- ADS-B transmission

For transponder control operation, consult the G3X Touch Pilot’s Guide.

XPDR Alert

If the transponder fails:

- Red “X” displays over the IDENT key
- Advisory message alerts
- XPDR control page is not available

Transponder fail annunciations are designed to be immediately recognizable. If a failure occurs while the control page is active, the display automatically returns to the previous page.

<table>
<thead>
<tr>
<th>UNIT</th>
<th>CONDITION</th>
</tr>
</thead>

</tbody>
</table>

For information regarding pilot response to a transponder failure, consult the AFMS.
ADS-B Altitude Reporting

AVAILABLE WITH:
GPS 175 | GNC 355

FEATURE REQUIREMENTS
• GDL 88

FEATURE LIMITATIONS
• Display and control functionality dependent on GDL 88 configuration

ADS-B Control Panel

ADS-B Out controls are accessible via the **ADS-B** key. The location of this key varies by unit type. On GPS 175, it resides in the upper right corner of the display. On GNC 355, it resides on the GDL 88 Status page.

1. Altitude Reporting Status (from GDL 88)
2. Anonymous Mode Key
3. Flight ID Key

When interfaced to a GDL 88 transceiver, GPS 175/GNC 355 allows control over some aspects of the ADS-B Out message and provides position information to the GDL 88.

Not all installations allow pilot control of ADS-B Out transmissions.

For more information, consult the **GDL 88 ADS-B Transceiver Pilot’s Guide**.
Get Started

ADS-B Key

FEATURE LIMITATIONS
• Functionality dependent upon GDL 88 configuration

Depending on the configuration of your GDL 88, tapping the ADS-B key:
• Reports GDL 88 altitude reporting status
OR
• Allows on/off control of the GDL 88’s altitude reporting function

“ALT” indicates that the unit is in altitude reporting mode. This indication corresponds to the function status annunciation on the control panel.

Enabling Anonymous Mode

FEATURE LIMITATIONS
• Availability dependent on GDL 88 configuration

During anonymous mode, the unit replaces identifying information in the ADS-B Out message with a temporary randomized number for privacy while providing position information. Instead of a flight ID, the unit transmits the call sign “VFR.”

Tap ADS-B > Anonymous.
The key label changes from “Off” to “Armed.”
Tapping Anonymous again toggles the mode off.
Assigning a Flight ID

FEATURE LIMITATIONS

• Availability dependent on GDL 88 configuration

If the flight ID is editable, tap **Flight ID** and assign a unique identifier. The key is not selectable (read-only) when the ID is received from the GDL 88.

Flight IDs are alphanumeric (upper-case only) and have an eight character limit. The active flight ID displays by default.

GDL 88 Alert

If the GDL 88 fails:

• Red “X” displays over the IDENT key
• Advisory message alerts
• ADS-B reporting functions are not available

Failure annunciations are designed to be immediately recognizable. If a failure occurs while the control page is active, the display automatically returns to the previous page.

<table>
<thead>
<tr>
<th>UNIT</th>
<th>CONDITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>GPS 175</td>
<td>GDL 88 failure.</td>
</tr>
<tr>
<td>GNC 355</td>
<td></td>
</tr>
</tbody>
</table>

For information regarding pilot response to ADS-B failures, consult the AFMS.
Get Started

Pilot Settings

Unit customization options allow you to:

- Set and display the CDI
- Specify runway criteria
- Set the date and time
- Specify COM radio settings [1]
- Create shortcuts
- Set the display units
- Adjust display brightness

Other setup options allow you to monitor time in flight and create custom reminder messages. These settings reside in the system Utilities.

For details about COM radio settings and Connext Setup options, refer to the respective section.

CDI Scale

Set the scale for the course deviation indicator. Scale values represent full scale deflection for the CDI to either side.

Options: • 0.30 nm • 1.00 nm • 2.00 nm • Auto

Scale selections are reflected in the annunciator bar.
CDI scale is set to “Auto” (default). At the default setting, the scale sets to 2.0 nm during the en route phase of flight.

Aircraft is within 31 nm of the destination airport (i.e., terminal area). The scale linearly ramps down to 1.0 nm over a distance of 1 nm.

Aircraft is leaving the departure airport. The scale is set to 1.0 nm once the aircraft is over 30 nm from the departure airport. It begins to gradually ramp up to 2 nm when the flight phase changes from terminal (TERM) to en route (ENR).

During GPS approach operations, the scale gradually transitions down to an angular scale.

Aircraft is 2.0 nm before the final approach fix. Scaling tightens from 1.0 nm to the angular full-scale deflection defined for the approach (typically 2.0°).

Selecting a lower value (0.3 nm or 1.0 nm) prevents the selection of higher scale settings during ANY phase of flight. Example: If you select 1.0 nm, the unit uses this setting for en route and terminal phases, and ramps down further during approach.

### Horizontal Alarm Limits

Horizontal alarm limits (HAL) are used to compare against GPS position integrity. These protection limits follow the CDI scale, unless the corresponding flight phase requires a lower HAL. For example, the selected scale setting is 1.0 nm, but full-scale deflection during approach still follows the approach scale setting (0.30 nm).

<table>
<thead>
<tr>
<th>FLIGHT PHASE</th>
<th>CDI SCALE</th>
<th>HORIZONTAL ALARM LIMIT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Approach</td>
<td>0.30 nm or Auto</td>
<td>0.30 nm</td>
</tr>
<tr>
<td>Terminal</td>
<td>1.00 nm or Auto</td>
<td>1.00 nm</td>
</tr>
<tr>
<td>En Route</td>
<td>2.00 nm or Auto</td>
<td>2.00 nm</td>
</tr>
<tr>
<td>Oceanic</td>
<td>Auto</td>
<td>2.00 nm</td>
</tr>
</tbody>
</table>
Toggling this setting displays the CDI scale on screen. When active, a CDI with lateral deviation indicator displays below the GPS NAV Status Indicator key.

**CDI OFF**

Only the Flight Plan page access key is available.

**CDI ON**

The CDI provides no indications without an active flight plan.

**Lateral Deviation Indicator**

Lateral deviation indications display when there is an active flight plan.

**Visual Approach Guidance**

Advisory horizontal guidance annunciations appear when a visual approach procedure is active.
**Airport Runway Criteria**

Specify runway criteria from the System Setup app. Selections determine which airports are suitable when using the nearest airport search feature.

During an approach, the terrain alerting algorithm uses airport runway settings to avoid nuisance alerts.

**Runway Surface**

Tap **Runway Surface** and then select the runway surface type.

Selecting “Any” allows all surface types to appear in the nearest airport list and be considered for use by Terrain.

**Runway Surface Options**

- Any
- Hard/Soft
- Hard Only
- Water

**Minimum Runway Length**

Specify a minimum runway length to:

- Exclude airports with shorter runways from the nearest airport list
- Inform the terrain function of which airports are available for use, so that terrain alerts do not generate when landing at one of these airports

Typing “0” allows runways of any length to appear in the nearest airport list and be considered for use by Terrain.
Clocks & Timers

Timers

Monitor time in flight using three available timer types.

Home

Utilities

Clock/Timers

Timer settings are accessible via the Utilities menu page. Toggle between timer types using the provided display key.

Clock/Generic Timer

Stopwatch style counter. Count up or count down. Specify countdown time using the preset function.

Controls:

- **Direction** (Up, Down)
- **Start • Stop • Timer Preset**

Trip/Departure Timers

Measure elapsed airborne time since the last ground-to-air transition. Set timer to start at unit power up or once the aircraft is in air.

Controls:

- **Criteria** (Power On, In Air)
- **Reset Timer**

Clock

Specify the time format and local offset. Settings reside in System Setup.

Format options include 12 hour, 24 hour, and UTC.

If a 12 hour or 24 hour clock is selected:

Tap **Local Offset** > Specify the appropriate offset value from UTC.
Page Shortcuts

A knob shortcut option allows you to customize slots 2 and 3 of the locator bar. Slot one is reserved for the Map page.

Tap a slot key and assign a page to that slot.

Page Shortcut Options

- Traffic
- Terrain
- Weather
- Nearest Airport
- Flight Plan

Depending on configuration, Traffic and Weather shortcuts may not be available.

Verify shortcut operation once complete.

Tapping **Restore Defaults** returns both slots to their default settings (Terrain for Slot 2, Nearest Airport for Slot 3).
Alerts Settings

Airspace alerts generate a message. They rely on three-dimensional data (altitude, latitude, and longitude) to avoid nuisance alerts.

FEATURE LIMITATIONS
- Alert altitudes are dependent on aircraft and airspace altitudes and the pilot-specified altitude buffer value

Control keys allow you to select which airspace boundaries generate an alert annunciation upon entry.

Airspace Alert Options
- Class B/TMA
- Class C/TMA
- Class D
- Restricted
- MOA (Military)
- Alt Buffer
  - Specify buffer value
- Other

Airspace alerts for Prohibited airspace cannot be disabled.

Alert boundaries for controlled airspace are sectorized to provide complete information on any nearby airspace.

Alert settings do not alter the depiction of airspace, nor do they change Smart Airspace settings on the Map page.

With the exception of Altitude Buffer, airspace alert options are on/off only.
Unit Selections

Customize the display unit settings. Tapping a parameter key opens a menu of the available unit types.

<table>
<thead>
<tr>
<th>PARAMETER</th>
<th>SETTINGS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance/Speed</td>
<td>• Nautical Miles (nm/kt)</td>
</tr>
<tr>
<td></td>
<td>• Statute Miles (sm/mph)</td>
</tr>
<tr>
<td>Temperature</td>
<td>• Celsius (°C)</td>
</tr>
<tr>
<td></td>
<td>• Fahrenheit (°F)</td>
</tr>
<tr>
<td>NAV Angle</td>
<td>• Magnetic (°)</td>
</tr>
<tr>
<td></td>
<td>• True (°T)</td>
</tr>
<tr>
<td></td>
<td>• User (°U)</td>
</tr>
<tr>
<td>Magnetic Variation</td>
<td>• Specify number of degrees for east or west (°E, °W)</td>
</tr>
<tr>
<td></td>
<td>• Available only when “User (°U)” is the active NAV angle</td>
</tr>
</tbody>
</table>

SPECIFY UNIT TYPE

1. Review the current unit selections.
2. Tap the applicable parameter key.
3. Select a unit type.
Display Brightness Control

Depending on configuration, display brightness is controlled using inputs from the built in photocell, aircraft dimmer bus, or both.

Automatic Brightness Control

Dimming is limited to prevent on screen indications from becoming unreadable. The built in photocell automatically controls display brightness based on ambient light levels.

During automatic control, the pilot may still adjust brightness using the manual offset controls in the Backlight page.

The unit retains manual offset settings over power cycles.

Manual Brightness Control

Optionally, the unit is configurable to use an aircraft dimming bus for display brightness control. Upon reaching minimum input level, display brightness reverts to the photocell. This prevents the display from going black in the event of a dimmer input failure.

Installer configured curves determine the amount of change in brightness that occurs in response to a control adjustment. If brightness control is not satisfactory, contact a Garmin dealer to adjust the lighting curves.
Scheduled Messages

Create custom reminder messages and set when they will display. Allows one time, periodic, and event-based message types.

CREATE A REMINDER MESSAGE

1. Tap **Create Scheduled Message**.
2. Specify the message type, content, and countdown timer value.

Message Types

<table>
<thead>
<tr>
<th>TYPE</th>
<th>DISPLAYS...</th>
</tr>
</thead>
<tbody>
<tr>
<td>One time</td>
<td>When the timer expires, or following each power cycle until message deletion.</td>
</tr>
<tr>
<td>Periodic</td>
<td>After a specified duration of time. Countdown repeats once the message displays.</td>
</tr>
<tr>
<td>Event</td>
<td>According to a specified date and time. Message timer not applicable.</td>
</tr>
</tbody>
</table>

Modifying Scheduled Messages

Once created, these messages may be modified at any time. Selecting a scheduled message opens an options menu.

EDIT MESSAGE

This function is accessible from either the Scheduled Messages page or the system message list.

RESET TIMER

Restarts the countdown timer.

DELETE MESSAGE

Confirming this request removes the selected message from the list.
Status Indications

Alert Types

The unit generates annunciations in response to various conditions that may occur. These abbreviated messages are grouped according to the level of urgency and required response. They display in order of priority, from highest to lowest.

1. Warnings
2. Cautions
3. Mode & function advisories

WARNINGS & CAUTIONS

Warnings require immediate attention. Cautions indicate the presence of an abnormal condition that may require pilot action. A warning may follow a caution if no attempt is made to correct the condition (e.g., altering the aircraft’s path toward the alerted terrain or obstacle).

MODE & FUNCTION ADVISORIES

Advisories provide status and operating information.

System advisories. These display on a dedicated message list. Depending on the number of advisories, this list may be scrollable.

Function or mode specific advisories. These appear as unobstructed annunciations in the annunciator bar.
Alert Annunciations

Alert annunciations are abbreviated messages that indicate an alerted function or mode. The color of the annunciation depends on the alert type.

<table>
<thead>
<tr>
<th>ALERT COLORS</th>
<th>• Warnings display in white text on red background</th>
</tr>
</thead>
<tbody>
<tr>
<td>WARNING</td>
<td>• Cautions display in black text on amber background</td>
</tr>
<tr>
<td>CAUTION</td>
<td>• Function or mode specific advisories display in black text on white background</td>
</tr>
<tr>
<td>ADVISORY</td>
<td></td>
</tr>
</tbody>
</table>

When an alert is triggered, the annunciation flashes by alternating text and background colors. It turns solid after five seconds. All annunciations remain active (solid) until the condition is resolved or no longer a threat.

ANNUNCIATION LOCATION

Alerts and informational advisories annunciate in the annunciator bar along the bottom of the screen.
Pop-up Alerts

If a warning or caution relating to terrain or traffic occurs, a pop-up window may display. These pop-ups only appear if the alerted function’s associated page is not active.

**Pop-up Alert Priority**

In the event of simultaneous alerts, pop-up windows display in the following order:
1. Terrain alerts
2. Traffic alerts

Each pop-up alert provides:
- Threat indication
- Alert annunciation
- Option to inhibit or mute the alert
- Control for closing the pop-up window
- Direct access to the associated page

To open the indicated page, tap **Go to <Page>**.
To acknowledge the alert and return to previous page view, tap **Close**.
Aural Alerts

FEATURE LIMITATIONS

- **GNX 375 only (traffic alerts)**[^1]
- **Mute alert function is applicable only to the active aural alert**
  *(does not mute future alerts)*

Traffic alerts are accompanied by an aural voice message. Voice gender is configured during installation.

![Mute Alert](image)

**A Mute Alert** key allows you silence the active traffic alert voice message.

[^1]: GPS 175/GNC 355 systems interfaced to a traffic system (GDL 88 or GTX 345): Aural alerts are available. They are provided directly from the traffic system LRU to the audio panel.
Get Started

**System Status**

View information specific to the unit and its software. Refer here when contacting customer service.

**System Info**
- Serial number
- System ID
- Main software version
- GPS/WAAS software version
- COM board software version (GNC 355/355A only)
- Transponder software version (GNX 375 only)

**Controls**

Database Info access keys:
- **Active**
- **Standby**

For more about active and standby databases, refer to *Databases*.

**GPS Status**

Monitor GPS receiver performance, establish a baseline for normal system operation, and troubleshoot weak or missing signal issues.

This page provides a visual reference of GPS receiver functions, including:
- Current satellite coverage
- Phase of flight
- Present position (latitude and longitude)
- GPS solution and receiver status
- Position accuracy

**SKY VIEW DISPLAY**

- Depicts satellites currently in view as well as their respective positions
- Outer circle represents the horizon (with north at the top of the circle)
- Inner circle represents 45° above the horizon
- Center point shows the position directly overhead
SIGNAL STRENGTH INDICATIONS

Satellite SVIDs
Each bar is labeled with the SVID of the corresponding satellite. Numbers vary according to satellite type.
- GPS: 1 to 31
- SBAS: 120 to 138

A graph shows GPS signal strength for up to 15 satellites. As the GPS receiver locks onto satellites, a signal strength bar appears for each satellite in view.

Graph symbols depict the progress of satellite acquisition. Some data may not display until the unit has acquired enough satellites for a fix.

<table>
<thead>
<tr>
<th>SYMBOL</th>
<th>CONDITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not present</td>
<td>Receiver is searching for the indicated satellites.</td>
</tr>
<tr>
<td>Gray bar, empty</td>
<td>Satellite located.</td>
</tr>
<tr>
<td>Gray bar, solid</td>
<td>Satellite located, receiver is collecting data.</td>
</tr>
<tr>
<td>Yellow bar, solid</td>
<td>Data collected, but satellite is excluded from position solution (i.e., it is not in use).</td>
</tr>
<tr>
<td>Cyan bar, cross-hatch</td>
<td>Satellite located, but FDE excludes it for being a faulty satellite.</td>
</tr>
<tr>
<td>Cyan bar, solid</td>
<td>Data collected, but receiver is not using satellite in the position solution.</td>
</tr>
<tr>
<td>Green bar, solid</td>
<td>Data collected, satellite in use in the current position solution.</td>
</tr>
<tr>
<td>D (inside bar)</td>
<td>Differential corrections are in use (e.g., WAAS).</td>
</tr>
</tbody>
</table>

If the unit has not been in operation for more than six months, acquiring satellite data to establish almanac and satellite orbit information may take 5 to 10 minutes.
POSITION ACCURACY FIELDS

<table>
<thead>
<tr>
<th>LABEL</th>
<th>POSITION DATA</th>
</tr>
</thead>
<tbody>
<tr>
<td>EPU</td>
<td>Estimated Position Uncertainty</td>
</tr>
<tr>
<td>HDOP</td>
<td>Horizontal Dilution of Precision</td>
</tr>
<tr>
<td>HFOM</td>
<td>Horizontal Figure of Merit</td>
</tr>
<tr>
<td>VFOM</td>
<td>Vertical Figure of Merit</td>
</tr>
</tbody>
</table>

Information fields indicate the accuracy of the position fix. HFOM and VFOM values represent 95% confidence levels in horizontal and vertical accuracy. Lower values mean higher accuracy. Higher values are the least accurate.

EPU is the horizontal position error estimated by the fault detection and exclusion (FDE) algorithm, in feet or meters.

NOTE

Under 14 CFR parts 91, 121, 125, and 135, the FDE availability prediction program must be used prior to all oceanic or remote area flights using GPS 175/GNX 375/GNC 355 as a primary means of navigation.

Circle of Uncertainty

FEATURE LIMITATIONS
- Available only when the aircraft is on ground
- Displays only on the Map page

Circle of Uncertainty

- Depicts area surrounding the ownship when GPS cannot accurately determine aircraft location
- Expires as GPS horizontal accuracy degrades
- Shrinks as accuracy improves
- Translucent with minor shading so as not to obstruct other features
SBAS Providers

NOTE
Operating with SBAS active outside of the service area may cause elevated EPU values to display on the status page. Regardless of the EPU value displayed, the LOI annunciation is the controlling indication for determining the integrity of the GPS navigation solution.

SBAS supports wide area or regional augmentation through the use of additional satellite broadcast messages.
Tap this key and select from the list of providers.

<table>
<thead>
<tr>
<th>PROVIDER</th>
<th>SERVICE AREAS</th>
</tr>
</thead>
<tbody>
<tr>
<td>EGNOS</td>
<td>Most of Europe and parts of North Africa.</td>
</tr>
<tr>
<td>GAGAN</td>
<td>India</td>
</tr>
<tr>
<td>MSAS</td>
<td>Japan only.</td>
</tr>
<tr>
<td>WAAS</td>
<td>Alaska, Canada, the 48 contiguous states, and most of Central America.</td>
</tr>
</tbody>
</table>

GPS Status Annunciations

Once the GPS receiver determines the aircraft’s position, the unit displays position, altitude, track, and ground speed data. GPS status annunciates under the following conditions.

<table>
<thead>
<tr>
<th>ANNUNCIATION</th>
<th>CONDITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Acquiring</td>
<td>GPS receiver uses last known position and satellite orbital data (collected continuously from satellites) to determine which satellites should be in view.</td>
</tr>
<tr>
<td>3D Nav</td>
<td>3-D navigation mode. GPS receiver computes altitude using satellite data.</td>
</tr>
<tr>
<td>3D Diff Nav</td>
<td>3-D navigation mode. Differential corrections from SBAS provider are in use.</td>
</tr>
<tr>
<td>LOI</td>
<td>Satellite coverage is insufficient to pass built-in integrity monitoring tests.</td>
</tr>
</tbody>
</table>
**GPS Alerts**
The following alert conditions can affect GPS accuracy.

<table>
<thead>
<tr>
<th>INDICATIONS</th>
<th>FAULT TYPE</th>
<th>CONDITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yellow “LOI” annunciation.</td>
<td>Loss of Integrity</td>
<td>Integrity of the GPS position does not meet the requirements for the current phase of flight. Occurs before the final approach fix (if an approach is active).</td>
</tr>
<tr>
<td>Unit invalidates active course guidance.</td>
<td>Loss of Navigation</td>
<td>Aircraft is after the final approach fix and GPS integrity does not meet the active approach requirements.</td>
</tr>
<tr>
<td>Unit invalidates active course guidance.</td>
<td>Loss of Navigation</td>
<td>Insufficient number of satellites supporting aircraft position (i.e., more than 5 seconds pass without adequate satellites to compute a position).</td>
</tr>
<tr>
<td>Unit invalidates active course guidance.</td>
<td>Loss of Navigation</td>
<td>GPS sensor detects an excessive position error or failure that cannot be excluded within the time to alert.</td>
</tr>
<tr>
<td>Unit invalidates active course guidance.</td>
<td>Loss of Navigation</td>
<td>On-board hardware failure.</td>
</tr>
<tr>
<td>Yellow “No GPS Position” annunciation.</td>
<td>Loss of Position</td>
<td>Unit cannot determine a GPS position solution.</td>
</tr>
<tr>

</tr>
<tr>
<td>Yellow “No GPS Position” annunciation.</td>
<td>Loss of Position</td>
<td>Unit cannot determine a GPS position solution.</td>
</tr>
<tr>
<td>Yellow “No GPS Position” annunciation.</td>
<td>Loss of Position</td>
<td>Unit cannot determine a GPS position solution.</td>
</tr>
</tbody>
</table>
ADS-B Status

FEATURE REQUIREMENTS

- GDL 88 or GTX 345 ADS-B transceiver (GPS 175 and GNC 355/355A only)

OR

- GNX 375

STATUS PAGE ACCESS KEY

Tap this key to view last uplink time and GPS source information.

GPS 175/GNC 355/355A: Key label reflects the configured ADS-B source.

GNX 375: Key label reads “ADS-B Status.”

UPLINK TIME

<table>
<thead>
<tr>
<th>TEXT COLOR</th>
<th>MINUTES SINCE LAST UPLINK</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>&lt; 5</td>
</tr>
<tr>
<td>Yellow</td>
<td>5 to 15</td>
</tr>
<tr>
<td></td>
<td>&gt; 15</td>
</tr>
</tbody>
</table>

This field displays the number of minutes since last uplink. Digital values may change color depending on duration. “> 15” displays when the time exceeds 15 minutes. Dashes indicate when valid uplink data is unavailable (e.g., the device is offline).
Get Started

FIS-B WX STATUS

Tap this key to view the status of FIS-B weather products. This page is also accessible from the FIS-B Weather setup menu.

TRAFFIC APPLICATION STATUS

Tap this key to view the status of the three traffic applications: • AIRB • SURF • ATAS (airborne alerts)

<table>
<thead>
<tr>
<th>ANNUNCIATION</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>Application is running. Required ownership data is available and meets the performance criteria.</td>
</tr>
<tr>
<td>Available to Run</td>
<td>Application is configured. Required input data is available and meets the performance criteria.</td>
</tr>
<tr>
<td>Unavailable to Run</td>
<td>Required input data is not available due to a failure (e.g., aircraft surveillance application process failed).</td>
</tr>
<tr>
<td>Unavailable - Fault</td>
<td>Required input data is available, but does not meet the performance criteria or is not available due to non-computed data conditions.</td>
</tr>
</tbody>
</table>
Logs

Export to SD Card

A logging function stores WAAS diagnostic and ADS-B traffic data (GNX 375 only) in the unit’s internal memory. This information is available for export to an SD card for later analysis.

FEATURE REQUIREMENTS
• SD card

FEATURE LIMITATIONS
• ADS-B traffic data logging available on GNX 375 only

To export a diagnostic log:
1. Insert an SD card.
2. Tap Utilities > Logs.
3. Select WAAS Diagnostic Log or ADS-B Log.

If no log files are present, these keys are not available.

WAAS Diagnostic Log Functions
• Generates log files automatically upon unit power-up
• Overwrites oldest file when the internal log reaches capacity
• Exports to the “log_files” folder on the SD card

ADS-B Log Functions (GNX 375 only)
• Generates log files automatically upon unit power-up
• Overwrites oldest file when the internal log reaches capacity
• Exports to the “log_files” folder on the SD card

ADS-B log files may take several minutes to export.
3 Navigation

MAP........................................................................................................................................3-3
ACTIVE FLIGHT PLAN..............................................................................................................3-27
DIRECT TO.............................................................................................................................3-43
WAYPOINTS.......................................................................................................................3-49
PROCEDURES......................................................................................................................3-64
Menu selections vary based on features and optional equipment installed with Garmin avionics.

[1] NEXRAD, Lightning, and Terrain overlays are mutually exclusive.
Map

To increase situational awareness, Map depicts the aircraft’s current position relative to land, aeronautical, weather, and traffic information.

FEATURE REQUIREMENTS
- Active GPS source (aircraft position symbol)
- UAT receiver (FIS-B weather)

FEATURE LIMITATIONS
NEXRAD, Lightning, and Terrain overlay functions are mutually exclusive. Enabling one automatically disables the other.

GNC 355 shown as typical.

Default Map Features

| 1 | Aircraft Symbol | Depicts current aircraft position and orientation. |
|   |                 | • Tip represents actual aircraft location         |
|   |                 | • Symbol type is dependent upon configuration    |
|   |                 | • Absent if a GPS source is not available        |
| 2 | Track Vector    | Current ground track indication.                 |
| 3 | Basemap         | Presents a graphical depiction of land and water data. |
### Navigation

<table>
<thead>
<tr>
<th></th>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>User Field</td>
<td>Customizable data field appearing in each corner of the map. Default user fields are as follows.</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>GPS 175/GNX 375</strong>: • distance • ground speed • desired track and track • distance/bearing from destination airport</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>GNC 355/355A</strong>: • distance • ground speed • desired track and track • from, to, and next waypoints</td>
</tr>
<tr>
<td>5</td>
<td>NAV Range Ring</td>
<td>Displays current direction of travel on a rotating compass.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Orientation: Magnetic north</td>
</tr>
<tr>
<td>6</td>
<td>Map Range Indicator</td>
<td>Displays current map range in the upper left quadrant of the range ring (i.e., the distance from the aircraft to the range ring).</td>
</tr>
<tr>
<td>7</td>
<td>North Indicator</td>
<td>Indicates True north.</td>
</tr>
<tr>
<td>8</td>
<td>Page Orientation Label</td>
<td>• <strong>North Up</strong> orients map to True north.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Heading Up</strong> orients map to current aircraft heading (requires heading data source interface).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Track Up</strong> orients map to current aircraft GPS track.</td>
</tr>
<tr>
<td>9</td>
<td>Map Overlay Icons</td>
<td>Indicates status of overlays at the current map range.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Includes: METAR, NEXRAD, obstacles, power lines, TFR, precipitation, Terrain, Lightning, and Traffic.</td>
</tr>
</tbody>
</table>

### Automatic Zoom

<table>
<thead>
<tr>
<th>Aircraft State</th>
<th>Default Zoom</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ground</td>
<td>0.50 nm</td>
</tr>
<tr>
<td>Air</td>
<td>10.0 nm</td>
</tr>
</tbody>
</table>

Map remembers the last zoom range for each aircraft state, and automatically resumes this view when the aircraft transitions between air and ground states.

### Feature Labels

To maintain readability, map feature labels remain uniform at all zoom levels.

### Traffic Units

System Units page selections do not affect the display of traffic on Map.
**LAND AND WATER DEPICTIONS**

Land and water data are for general reference only. Data accuracy is not suitable for use as a primary navigation source. The information is intended to supplement and not replace official government charts and notices.

**DATA DRAWING ORDER**

The electronic map draws data in order of priority, from highest (1) to lowest (25), with higher priority features drawn atop those of lower priority.

</tbody>
</table>
Map Setup

Map setup options allow you to customize the display of aeronautical information. Tap Menu when you need to:

- Change map orientation settings
- Configure user fields
- Adjust the map detail level
- Enable map overlays
- Select a NEXRAD source
- Filter airspace data according to altitude
- Specify airway types and range values
- Expand the forward-looking view for improved situational awareness

RESTORE MAP SETTINGS

With the exception of user fields, this key restores all original factory map settings.

[1] On/off functionality only.
Configure User Fields

Default User Fields
- DIS - Distance
- GS - Ground Speed
- DTK/TRK - Desired Track/Track
- Flight Plan - From/To/Next

Displays Map in configuration mode, allowing you to customize the display of data in each corner of the page.

User fields are useful during time sensitive and work load intense phases of flight.

In configuration mode:
- All four data fields change to selectable keys
- All other map elements are inactive

Tap any key and select from the list of available data types. Displayed units change based on selection.

Selecting “OFF” removes the corresponding user field from the map page.

Tapping Restore User Fields returns all fields to their default settings and removes the TOPO scale if present.

GPS 175/GNX 375:
For convenience, Map user fields may be toggled on and off by pushing the control knob.
Fields remain hidden when you use the knob shortcut to move between Map and the Active FPL page. They reappear in their respective corners when you return to the Home page or use the knob to move between Map and any other application.*

* This functionality is not available on GNC 355/355A.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

“Destination” refers to the missed approach point (if an approach is loaded) or the final airport in the flight plan.
Map Orientation

Sets the orientation of the map display. Options include North Up, Track Up, or Heading Up. Label below the North indicator shows the current orientation.

North Up is useful when zoomed out to view the entire route or a frontal system on a NEXRAD display.

North Up Above

Sets the range at which map orientation changes to North Up.

Using the North Up Above feature causes the screen to switch at certain zoom levels. This is useful as a shortcut to quickly increase situational awareness.
Navigation

Visual Approach

Sets the distance from the destination airport at which the **Visual Approach** selector key becomes active.

To reduce page clutter, the key moves to the upper left corner of the display when the info banner is active.

**TOPO Scale**

Displays a topographical elevation scale. To remove the scale:

- Toggle **TOPO Scale** off

**OR**

- Tap **Restore User Fields**

**Range Ring**

Provides a more precise indication of distance between the aircraft and map objects.
Track Vector

FEATURE LIMITATIONS

- Indication absent when aircraft velocity is < 30 kt

Indicates the current ground track. Arrow tip represents aircraft position at the specified time interval (if the aircraft maintains current ground track during that time).

Track vector length options display as a dashed line and arrow extending from the aircraft icon, showing current track and distance the aircraft will travel in the selected time.

If the track vector is placed over a point on the map, and no data is entered into the system, the unit indicates a wind-corrected GPS track to that point. This is useful for intercepting airways and radials, making small but positive lateral corrections during approaches, and in setting up for arrivals in the terminal area.

Ahead View

FEATURE LIMITATIONS

- Not available when page orientation is North Up

Repositions ownship near the bottom of the page to expand the view ahead.
Navigation

Map Detail
Changes to the map detail level take effect immediately. Options include full, high, medium, and low.

Navigation

Map Interactions

Basic Interactions
Typical map interactions include zoom, pan, and object selection.

PAN & ZOOM
Panning allows movement of the map in any direction without change to the current zoom setting. Zooming adjusts the current magnification level between pre-defined range parameters.

Before flight, consider which map scales are best for achieving the desired level of detail and map information. Generally, use smaller map scales in and around terminal areas and whenever precise navigation is required (e.g., airway or radial intercepts). During cruise flight, increase the map scale to better balance navigation, situational awareness, and decision making.

OBJECT SELECTION
Tapping any object or location on the map displays a map pointer and an information banner.

MAP POINTER
This symbol indicates point of contact on the map. A gray circle highlights any selected waypoint or obstacle.
MAP INFO

Available information and controls are dependent upon object or location type and proximity to other objects.

Selected Airport

Selecting an airport icon displays the airport’s highest field elevation. A map pointer icon corresponds with the touch point on the map.

An information page access key displays when you select a waypoint, airspace, airport, airport surface hot spot, or TFR.

Info

- Pan mode annunciation
- Bearing and distance from current aircraft position to map pointer
- Location elevation
- Maximum altitude AGL and MSL for obstacles

Controls

- Map Pointer/Create Waypoint
- Graphical Edit
- Next (for stacked objects)
- Associated information page access key, if applicable

STACKED OBJECTS

To move the selector through each object in proximity of the map pointer, select an object and tap Next.

Overlapping objects may be difficult to identify at a given zoom level.
Graphical Flight Plan Editing

**FEATURE LIMITATIONS**
- Parallel track offsets do not apply to the temporary flight plan

Graphical editing allows quick changes to the active flight plan from the map display.

Map provides identifier keys for selecting waypoints that are stacked or in close proximity. If the displayed options are not preferred, tap away or select **Cancel**.
TEMPORARY FLIGHT PLAN BANNER

An information banner displays waypoint selections made during graphical edit mode. All selections become active once you tap Done.

Tapping **Undo** reverses the last edit. You may undo up to nine of the most recent actions.

On the map, dragging and releasing the leg away from any waypoints removes it from the temporary flight plan.

To exit edit mode without saving changes, tap **Cancel**.

ADD WAYPOINT TO AN EXISTING LEG

You can edit, add, or omit flight plan legs by tapping or dragging your finger directly on the map.

1. Tap any location on the map.
2. Tap **Graphical Edit**.
3. Tap and drag the leg to a new waypoint or airway, then release.

The temporary flight plan adjusts to show the new route.

If no other edits are necessary, tap Done.

The new waypoint now appears in the active flight plan.

GPS 175 & GNX 375:
Active route identifiers also appear on the GPS NAV Status indicator key in the lower right corner of the display.

GNC 355/355A:
If configured, a user field shows active route identifiers on Map.

Delete any existing flight plan before attempting to graphically edit a direct-to waypoint. Map does not allow the addition of an intermediate waypoint between the current position and a direct-to waypoint unless the waypoint is in the flight plan.
**REMOVE WAYPOINT FROM FLIGHT PLAN**

You can tap and drag any leg to another waypoint or airway, or release it away from any waypoint if an alternate destination is not preferred.

**CREATE LEGS WITHOUT AN EXISTING FLIGHT PLAN**

If an active flight plan does not exist, you can graphically create one without ever leaving the Map page.

1. Tap any location on the map > **Graphical Edit**.
2. Begin tapping waypoints to add them to the temporary flight plan.
3. Tap **Done**.
Map Overlays

Overlay Selections

- TOPO
- Terrain
- Traffic
- NEXRAD
- METAR
- Lightning
- TFR
- Airspaces
- Airways
- Obstacles & Wires

Overlay data controls reside in the Map menu. Changes to an overlay setting take effect immediately.

NEXRAD, Terrain, and Lightning overlays are mutually exclusive. Enabling one automatically disables the other.

Weather product and traffic overlays are optional on GPS 175 and GNC 355. They are available only when configured for ADS-B In equipment.

Overlay Controls

Control keys enable the specified overlay function only and do not activate interfaced equipment. Control keys remain active even in the absence of required data.

Overlay controls reside in the Map menu.

TOPO

- Overlays topographical data and ground elevation scale
- Depictions are similar to a VFR sectional
- Pilot-selectable topographical elevation scale available

TERRAIN

- Overlays terrain map data
- Color shading depicts terrain elevation relative to the aircraft’s altitude
TRAFFIC

- Overlays traffic information
- Filter selection on the Traffic page determines altitude range
- Feature optional for GPS 175 and GNC 355

NEXRAD

- Overlays datalink precipitation weather information
- Options include: CONUS, Regional, or off (none)
- Feature optional for GPS 175 and GNC 355

LIGHTNING

- Overlays lightning information
- Lightning strikes display as a lightning bolt or a cluster of bolts

METAR

- Overlays graphical METARs
- Tapping flag icon displays information on current and forecast conditions
- Available only in areas covered by the active navigation database
- Feature optional for GPS 175 and GNC 355
Navigation

TFR

- Overlays graphical TFRs
- Tapping this airspace symbol displays details regarding the restricted area
- Feature optional for GPS 175 and GNC 355

AIRSPACES

- Overlays airspace boundaries with altitude labels
- Filter selection determines altitude range

AIRWAYS

- Overlays the selected airway type(s) with identifier labels
- Options include: low, high, all, or off (none)
- High altitude airways are green, low altitude airways are gray

OBSTACLES & WIRES

- Overlays obstacle and wire data
- Color shading depicts an object’s elevation relative to the aircraft’s altitude
Overlay Status Icons

Icons indicate which overlays are present at the current map range. The absence of an overlay icon means one of two possible conditions:

1. Overlay not present at the current detail level or zoom setting.
2. Overlay control is off.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Overlay</th>
<th>Icon</th>
<th>Overlay</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Icon]</td>
<td>METAR</td>

<td>Terrain</td>
<td>![Icon]</td>
<td>Lightning</td>
</tr>
</tbody>
</table>

**Data Not Available**

This icon means the overlay is active, but data is unavailable due to a failure, test, or standby condition (where relevant).

**Stale Data**

This icon means overlay data is not current but remains displayed.
Garmin’s Smart Airspace feature automatically de-emphasizes non-pertinent airspace away from the aircraft’s current altitude.

When an airspace’s vertical proximity to the aircraft is >1,000 ft:

- Its boundary becomes transparent
- All associated altitude labels turn gray

This range increases linearly to 2,000 ft as the aircraft ascends to 10,000 ft.

### SMART AIRSPACE CRITERIA

<table>
<thead>
<tr>
<th>AIRCRAFT ALTITUDE</th>
<th>AIRSPACE PROXIMITY TO AIRCRAFT [1]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sea level</td>

SafeTaxi

SafeTaxi provides greater map detail and higher image resolution at lower zoom levels.

Feature labels denote:
• Runways
• Taxiways
• Airport landmarks

SafeTaxi Features

• Airport diagram overlay that includes hot spot information
• Aircraft position relative to taxiways, runways, and airport landmarks
• Pilot selectable range options

SAFETAXI DATA SYMBOLS

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>24R</td>

<td>Unpaved Parking</td>
</tr>
</tbody>
</table>
HOT SPOTS

SafeTaxi hot spots identify locations on an airport surface where positional confusion or runway incursions are likely to occur. These known problem areas require heightened attention by pilots.

Selecting the border of a hot spot displays a brief summary of the indicated hazard and an information key.

Tapping this key provides additional location information. Numbering corresponds to a list on the airport diagram.

The following airport features may be deemed hot spots by aviation authorities.
- Intersecting taxiways and runways
- Complex ramp areas
- Directional limitations
- Limited wing-tip clearance
- Overflight risk

CONSTRUCTION SPOTS

There are no expanded detail keys or notes associated with construction areas.
Active Flight Plan

Current flight plan information displays as a scrolling list on the Active Flight Plan (FPL) page.

FEATURE REQUIREMENTS
- Active flight plan

FEATURE LIMITATIONS
- Displays up to 100 waypoints for an active flight plan

---

**Active Flight Plan Page**

1. Selectable Data Field Columns
2. Waypoint Identifier Column
3. Active Leg Indicator
4. Current Waypoint
5. Add Waypoint Key
6. Leg Data
7. Waypoint Type Icon
For convenience, airport information is directly accessible from the procedure header. This includes airports specified in active approaches, arrivals, and departures.

Tap **Airport Info** to open the corresponding information page.

### FIX TYPE INDICATIONS

<table>
<thead>
<tr>
<th>LABEL</th>
<th>FIX TYPE</th>
</tr>
</thead>
<tbody>
<tr>
<td>iaf</td>
<td>Initial Approach Fix</td>
</tr>
<tr>
<td>faf</td>
<td>Final Approach Fix</td>

<tr>
<td>map</td>
<td>Missed Approach Point</td>
</tr>
<tr>
<td>mahp</td>
<td>Missed Approach Hold Point</td>
</tr>
<tr>
<td>-p</td>
<td>Parallel Track (no fix)</td>
</tr>
</tbody>
</table>

When applicable, labels indicate the fix type associated with an identifier.
ACTIVE LEG STATUS INDICATIONS

Magenta symbols denote active leg status on from/to/next waypoint indications. Fix type symbols (e.g., FAF, MAP) correspond with labels appearing on the flight plan.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>📍</td>
<td>IAF</td>
</tr>
<tr>
<td>🚧</td>
<td>Arc Left</td>
</tr>
<tr>
<td>📍</td>
<td>FAF</td>
</tr>
<tr>
<td>🔄</td>
<td>Holding Pattern (Right Turns)</td>
</tr>
<tr>
<td>📍</td>
<td>MAP</td>
</tr>
<tr>
<td>🔄</td>
<td>Holding Pattern (Left Turns)</td>
</tr>
<tr>
<td>📰</td>
<td>MAHP</td>
</tr>
<tr>
<td>🖫</td>
<td>Active Leg Arrow</td>
</tr>
<tr>
<td>⬊</td>
<td>Parallel Track</td>
</tr>
<tr>
<td>🖫</td>
<td>Direct To</td>
</tr>
<tr>
<td>🖫</td>
<td>Arc Right</td>
</tr>
</tbody>
</table>

GNC 355/355A:

Activating a direct-to course displays the corresponding fix symbol and waypoint identifier in two locations:

- **Map User Field**: If configured, a user field shows the active waypoint identifier and fix type on Map.

- **Active Direct To Fix Indicator**: Direct To key changes to show the active waypoint identifier and fix type.
Collapse All Airways

Airways automatically display as flight plan legs. A single airway may contain numerous legs. Airways without an active leg collapse for simplification. This does not affect airway legs shown on the external navigator(s).

All airways begin with an indicator field and end with an exit identifier.

To hide all waypoints along an airway, but not the airway’s exit waypoint, tap Collapse All Airways.
OBS

The Omni Bearing Selector (OBS) allows you to select between manual or automatic sequencing of waypoints.

When active, this function allows you to set the desired course To/From a waypoint using the provided controls or with an external OBS selector on HSI or CDI.

1. Tap OBS.
2. Specify a heading course. CDI indicates the OBS heading. The mode displays on the annunciator bar.

The unit retains the active To waypoint as a navigation reference even after passing the waypoint (i.e., prevents sequencing to the next waypoint). Tapping the key again resumes automatic sequencing of waypoints (normal mode).

**SUSPEND/UNSUSPEND**

**SUSP**

This key displays for leg types that do not support OBS.

**UNSUSP**

This key displays for legs that auto suspend (e.g., leg holds, missed approaches).
Dead Reckoning

**WARNING**

*Do not use projected position data as the only means of navigation.*

**Points About Dead Reckoning**

- Provides limited navigation using the last known position and speed following the loss of GPS navigation while on an active flight plan
- Becomes active after a loss of GPS position while navigating using an active flight plan and the flight phase is either En Route or Oceanic
- Allowed only during en route and oceanic phases of flight

**When dead reckoning mode is active:**

- Map reports “No GPS Position”; overlays are not available
- DR mode annunciation replaces ENR or OCN
- Terrain functionality is not available
- Traffic displays on its dedicated page only
- CDI is not available

Dead reckoning mode ends once GPS position is restored.
Parallel Track

Create a parallel course offset relative to the current flight plan. Setup controls provide offset distance and direction setting (left of track or right of track).

FEATURE REQUIREMENTS
- Active flight plan

FEATURE LIMITATIONS
- Function not available when Direct-to is active.
- Graphical editing of the active leg cancels the parallel track function
- Offset range: 1 nm to 99 nm
- Large offset values combined with certain leg types (e.g., approach) or leg geometries (i.e., changes in track >120º) do not support parallel track

<table>
<thead>
<tr>
<th>TRACK</th>
<th>COLOR</th>
</tr>
</thead>
<tbody>
<tr>
<td>Offset</td>
<td>Magenta</td>
</tr>
<tr>
<td>Original</td>
<td>Gray</td>
</tr>
</tbody>
</table>

Once activated, a new track line appears to the left or right of the original course line at the specified distance. The aircraft navigates to the offset track with external CDI/HSI guidance now driven from the parallel track.

A graphical depiction overlays on the map.

Corresponding fix symbols on the flight plan indicate when the active leg is on a parallel track.

GPS 175 & GNX 375:
Active route identifiers also appear on the GPS NAV Status indicator key in the lower right corner of the display.

GNC 355/355A:
If configured, a user field shows active route identifiers on Map.
ACTIVATE A PARALLEL TRACK

1. Tap **Menu > Parallel Track**.
2. Tap **Offset** and specify a distance between 1 nm and 99 nm.
3. Tap **Direction** and select left of track or right of track.
4. Tap **Activate**.

To deactivate parallel track, tap **Menu > Deactivate PTK**.
Edit Data Fields

To select a flight plan data column, tap **Edit Data Fields**. Columns are arranged in numerical order (1 - 3).

To restore columns to default display settings, tap **Restore Defaults**.

<table>
<thead>
<tr>
<th>DATA FIELD SELECTIONS</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>CUM</td>
<td>Cumulative Distance</td>
</tr>
<tr>
<td>DIS</td>
<td>Distance</td>
</tr>
<tr>

<td>Desired Track</td>
</tr>
<tr>
<td>ESA</td>
<td>En Route Safe Altitude</td>
</tr>
<tr>
<td>ETA</td>
<td>Est. Time of Arrival</td>
</tr>
<tr>
<td>ETE</td>
<td>Est. Time En Route</td>
</tr>
</tbody>
</table>

Selections are identical for each column. By default, flight plan information fields display:
- Column 1: DTK
- Column 2: DIS
- Column 3: CUM

Flight Plan Catalog

Create, activate, edit, copy, and delete flight plans within the catalog.

FEATURE LIMITATIONS
- Stores up to 99 flight plans with a maximum of 100 waypoints each

Each catalog entry includes a route identifier, the route distance, and en route safe altitude.

The identifiers of the departure and destination waypoints comprise the route identifier.
Navigation

Catalog Route Options

Selecting a flight plan opens a menu. Changes to the active flight plan take effect immediately.

- Activate the selected flight plan (replacing the active flight plan)
- Reverse and activate the selected flight plan
- Preview a selected flight plan
- Make changes to a flight plan
- Copy the flight plan and modify it to create a similar one
- Remove individual or multiple flight plans

<table>
<thead>
<tr>
<th>Route Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activate</td>
<td>Activating a stored flight plan overwrites the active flight plan</td>
</tr>
<tr>
<td>Invert &amp; Activate</td>
<td>Reverse and activate the selected flight plan for guidance back to your original departure point. The inverted flight plan is a copy. Changes do not affect the original flight plan, which remains stored in the catalog.</td>
</tr>
<tr>
<td>Preview</td>
<td>View the flight plan route as it will appear on Map and on the Active FPL page. Options include Store, Edit, and ACTV (Activate).</td>
</tr>
<tr>
<td>Edit</td>
<td>Modify the selected flight plan on the Edit Catalog Flight Plan page.</td>
</tr>
<tr>
<td>Copy</td>
<td>Create a copy of the selected flight plan. A copy may be used as a starting point for creating a similar flight plan. Select the copy and tap Edit to make modifications.</td>
</tr>
<tr>
<td>Delete</td>
<td></td>
</tr>
</tbody>
</table>
DELETE A FLIGHT PLAN
Deleting the active flight plan does not delete the stored flight plan in the catalog.

From the FPL menu:
1. Tap **Menu > Delete**.
2. Confirm the request.

From the catalog:
1. Select a flight plan.
2. Tap **Delete**.
3. Confirm the request to delete all waypoints.

DELETE ALL CATALOGED FLIGHT PLANS
To remove all flight plans from the catalog:
1. Open the catalog.
2. Tap **Menu > Delete All**.
3. Confirm the request to clear the catalog.
4. Tap **Delete Pending**.
5. Confirm the request to remove all flight plans pending preview.
Create a Flight Plan

**NOTE**

The unit cannot verify the accuracy of cataloged flight plans with modified procedures.

There are three methods for creating a new flight plan.

**CREATE FROM THE ACTIVE FLIGHT PLAN PAGE**

1. Tap **Flight Plan**.
2. Delete the existing flight plan if necessary (**Menu > Delete**).
3. Tap **Add Waypoint**.
4. Select an identifier using the provided search options.
5. Repeat steps 3 - 4 for each waypoint in the route.

**CREATE FROM MAP**

Build a flight plan by selecting waypoints directly on the map using the Graphical Edit feature. For more about this method, read **Graphical Flight Plan Editing**.

**CREATE FROM THE FLIGHT PLAN CATALOG**

1. Tap **Flight Plan > Menu > Catalog**.
2. Scroll to the end of the flight plan list.
3. Tap **Create New Catalog Route > Add Waypoint**.
4. Add waypoints using the provided search options.
5. Tap **Menu > Preview > Store** or **ACTV (Activate)**.

As a general practice, never save flight plans with modified procedures in the catalog.
## Flight Plan Waypoint Options

**Options Menu**

- **Insert Before**
- **Insert After**
- **Load PROC**
- **Load Airway**
- **Activate Leg**
- **Hold at WPT**
- **WPT Info**
- **Remove**

Selecting a waypoint identifier opens a menu. Changes to the active flight plan take effect immediately.

- Insert a new waypoint into a flight plan
- Add an airway or procedure
- Change the active leg
- Remove a selected waypoint
- Add a holding pattern to an existing waypoint
- View information about a waypoint

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Insert Before</strong></td>
<td>Insert a new waypoint before the selected waypoint.</td>
</tr>
<tr>
<td><strong>Insert After</strong></td>
<td>Insert a new waypoint after the selected waypoint.</td>
</tr>
</tbody>
</table>
| **Load PROC** | Open the Procedures app to specify a departure, arrival, or approach for loading. Available controls are dependent upon the relative position of the aircraft to the active flight plan. Options may include:  
  - Activate Approach
  - Vectors to Final
  - Activate Missed Approach |
| **Load Airway** | Assign an airway and exit waypoint to the selected entry waypoint (e.g., intersection, VOR). |
| **Activate Leg** | Designate any TO waypoint as the active flight plan leg. Requires an active catalog flight plan. |
| **Hold at WPT** | Create a user-defined hold at the selected waypoint. Specify hold parameters and preview holding patterns from a dedicated menu page. |
| **WPT Info** | Open the dedicated information page for the selected waypoint. |
| **Remove** | Remove the selected waypoint or hold from the active flight plan. |

You may also set a direct-to course to any existing waypoint in the active flight plan. Select an identifier and tap the **Direct To** key.

For details about Direct To features, refer to *Direct To Basics*. 
Navigation

Flight Plan Map Overlays

Leg Status Indications

<table>
<thead>
<tr>
<th>LEG STATUS</th>
<th>COLOR</th>
</tr>
</thead>
<tbody>
<tr>
<td>Active</td>
<td>Magenta</td>
</tr>
<tr>
<td>Next &amp; Future</td>
<td>White</td>
</tr>
<tr>
<td>Past or Inactive</td>
<td>Gray</td>
</tr>
</tbody>
</table>

Active, next, and previous flight plan legs overlay on the Map page and are display only.

Leg Status Indications
Flight Plan User Field

AVAILABLE WITH:
GNC 355/355A

FEATURE REQUIREMENTS
- Active flight plan for from-to-next route information

If configured, a user field shows active route identifiers (from-to-next) on Map.

Map User Fields

No Flight Plan Exists
Underscores denote the absence of an active leg.

Active Route Display
Field shows active route identifiers (from-to-next) and leg types when a flight plan exists.
Located in the lower right corner of the display, the **GPS NAV Status** indicator key displays from-to-next route information when an active flight plan exists. Indications change based on active leg status.

### No Flight Plan Exists

Tap for direct access to the active flight plan.

Page icon means an active flight plan does not exist.

### Route Indicator Only

Once the page is open, the indicator is display only.

Underscores denote the absence of an active leg.

### Active Route Display

Label changes to show active route identifiers (from-to-next) and leg types.

### CDI Scale Active

Only from-to waypoints display when the CDI scale is active.

This function is controlled via the System Setup screen.
Direct To

Tapping this key opens the Direct To function. Search tabs provide three different methods of waypoint selection.

**FEATURE LIMITATIONS**
- Not all flight plan entries are selectable using Direct To (e.g., holds, course reversals)

**Direct To Basics**

Direct To is useful for quickly navigating to:
- New waypoints
- An existing waypoint in the active flight plan
- Nearby airports
- Map waypoints
- An off-route course
- User-defined holds

Set a course to any waypoint using Direct To.
Selecting an identifier automatically displays information about the waypoint.

When navigating to a single waypoint (e.g., a nearby airport), the Direct To function provides a quicker alternative to using the active flight plan.

**Direct To Search Tabs**

Search tabs include: Waypoint, FPL, and NRST APT
Navigation

WAYPOINT
Similar to an information page, but with course and hold options. This tab is active by default.

**Info**
- Distance and bearing from current aircraft position
- Applicable city, state, country and/or region (e.g., “NW USA”)
- Identifier and type icon

**Controls**
- Waypoint Identifier key with access to multiple search tabs
- Course To key for specifying heading angle for the navigation path
- Hold key for creating, loading, and activating user-defined holds

FPL & NRST APT
FPL and NRST APT tabs provide a list of selectable identifiers. These tabs have a uniform layout.

**FPL:** Lists all waypoints contained in the active flight plan.

**NRST APT:** Lists up to 25 waypoints within a 200 nm radius. The closest airport appears at the top of the list.
Direct To Activation

Activating a direct-to course establishes a point-to-point line from the aircraft’s present position to the selected destination. The unit provides course guidance until you remove the direct-to waypoint, or replace it with a new direct-to course or flight plan.

Upon activation, Map automatically opens to show a graphical representation of the active direct-to leg.

GPS 175 & GNX 375

GPS NAV Status key changes to show active leg status.

GNC 355/355A

Direct To key changes to show the active direct-to fix. Indication includes the corresponding fix symbol and waypoint identifier.
If configured, a user field shows the active waypoint identifier and fix type on Map.

GPS 175/GNX 375:
For convenience, you may activate a direct to course using the control knob. This option is available only when the Home page is active.
Push the knob once to access the Direct To function.
After selecting a waypoint, push the knob again to activate the direct-to course.
The window closes and Map opens to show the active leg.
Navigating Direct To

While most direct-to operations follow the same basic steps, the method for selecting a waypoint may vary.

DIRECT TO A NEW WAYPOINT

1. Tap Direct To.
2. Select a waypoint identifier.
3. Tap Course and specify the course heading (if a specific course is necessary).
4. Activate the selection.

DIRECT TO A FLIGHT PLAN WAYPOINT

**Flight Plan Waypoints**

If a flight plan exists, waypoint sequencing resumes once you reach the direct-to waypoint. If the waypoint is not in the flight plan, the flight plan is no longer active but remains available.

Direct To options are not available for all flight plan entries. Some entries include holds and course reversals which are not selectable using Direct To.

1. Tap Direct To.
2. Select FPL tab.
3. Select a flight plan leg.
4. Activate the selection.

DIRECT TO THE NEAREST AIRPORT

1. Tap Direct To.
2. Select NRST APT tab.
3. Select an airport.
4. Activate the selection.

DIRECT TO A MAP WAYPOINT

**MAPWPT**

For map locations without an existing name, Direct To assigns the “MAPWPT” identifier. Bearing, distance, and map coordinates display on the Waypoint tab.

Apply a direct-to course to any location on the map.

1. Tap a location on Map.
2. Tap Direct To.
3. Activate the selection.

You can modify direct-to routes on Map using the Graphical Edit function the same as you would a flight plan.
DIRECT TO AN OFF-ROUTE COURSE
You may activate an off-route course using any of the described direct-to methods. Activating an off-route direct-to course automatically deactivates the current leg of the active flight plan.

Direct To & Procedure Fixes
Approach guidance is not available for procedure fixes. An example would be activating a direct-to course to a waypoint between the final approach fix and missed approach point. Upon arriving at the waypoint, approach guidance does not become active.

Removing a Direct-to Course
To cancel the current direct-to course, tap Remove.

Removing a direct-to course:
- Reactivates the original active flight plan
- Assigns the leg nearest to the aircraft’s position as the active leg
- Resumes waypoint sequencing

If no active flight plan exists, the aircraft continues on its current heading without any navigation guidance.
**Navigation**

**User Holds**
You may define a holding pattern for any direct to waypoint. User holds suspend automatic waypoint sequencing until they expire or are removed.

Tapping **Hold** displays available hold options.

---

**GPS 175 shown as typical.**

---

<table>
<thead>
<tr>
<th>Load Hold</th>
<th>Accept the specified hold parameters and return to the Direct To window.</th>
</tr>

</tr>
</tbody>
</table>

---

**CREATE & ACTIVATE A HOLD**
Create a hold for a direct-to waypoint. From the Waypoint tab:

1. Tap **Hold**.
2. Specify hold parameters.
3. Tap **Load Hold > Hold Activate**.
Waypoints

There are two types of waypoints: database and user.

Database waypoints (i.e., waypoints contained in the navigation database) are organized into the following groups:

- Airport (APT)
- Intersection (INT)
- Very High Frequency Omni-directional Range (VOR)
- Visual Reporting Point (VRP)
- Non-Directional Beacon (NDB)

The Airport page is a great place to start when performing an approach brief, checking weather, or considering a diversion.

You also have the ability to define any point in space and store it. Unlike database waypoints, these “user” waypoints are editable.

Waypoint Information

Dedicated information pages provide waypoint search functions and details not available on the Map page.

FEATURE REQUIREMENTS

- FIS-B (viewing NOTAMs)
- Navigation database containing VRP waypoint data

FEATURE LIMITATIONS

- 2-D maps provide zoom functionality only
- FIS-B transmits distant and FDC NOTAMs within 100 nm of radio station position
Navigation

Intersection, VOR, VRP, and NDB information pages have a uniform layout.

**COMMON PAGE FEATURES**

All waypoint information pages share the following features.

<table>
<thead>
<tr>
<th>Data</th>
<th>Controls</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Distance and bearing from current aircraft position</td>
<td>• <strong>Waypoint Identifier</strong> key with access to multiple search tabs</td>
</tr>
<tr>
<td>• Latitude and longitude</td>
<td>• <strong>Preview</strong> key for displaying a 2-D map of the surrounding area (includes SafeTaxi airport depictions)</td>
</tr>
<tr>
<td>• Applicable city, state, country and/or region (e.g., “NW USA”)</td>
<td>• Identifier and type icon</td>
</tr>
</tbody>
</table>

As you approach an airport, use the Preview function to orient yourself for such things as pattern entry or runway alignment.
WAYPOINT SPECIFIC PAGE FEATURES
Features listed here are unique to the corresponding waypoint.

**Airport**
Selectable abs:
**Info:** Airport location, elevation, time zone, and fuel availability.

**Procedures:** Available approach procedures.

**Runways:** Identifiers, size, surface type, and traffic pattern direction.

Tapping **Runway** opens a list of available runways.

**Frequencies:** Available communication and localizer frequencies. The “c” symbol denotes frequencies that function as the CTAF.

View additional frequency information by tapping **More Information**, if available.

**WX Data:** Applicable METARs, city forecasts, and TAF weather information.

**NOTAMs:** Applicable distant and FDC NOTAMs.

**VRPs:** Nearest VRPs.

**Intersection**
Data fields:
- Nearest VOR (identifier, type icon, bearing, and distance)

**Very High Frequency Omni-directional Range**
Data fields:
- Frequency
- Nearest airport (identifier, type icon, bearing, and distance)
- Station declination
- VOR class

**Visual Reporting Point**
Data fields:
- Nearest VRP (identifier, type icon, bearing, and distance)

**Non-Directional Beacon**
Data fields:
- Frequency
- Nearest airport (identifier, type icon, bearing, and distance)
- Marker description
User Waypoint

Selectable functions:

**Edit:** Opens the Create User Waypoint page for editing purposes.

**View List:** Displays a list of all user waypoint identifiers.

**Delete:** Removes the selected user waypoint from the list.

**Delete All:** Removes all user waypoints from the list. All deletions require user confirmation.

User waypoints in the active flight plan cannot be edited or deleted.

Data fields:

- Reference position or nearest waypoint (identifier, type icon, radial, and distance), whichever is applicable
- Number of waypoints used out of 1,000

The User WPT page is the only page that allows you to view an entire list of all user waypoints created and saved in the database.
Waypoint Selection

The Waypoint Identifier key provides access to different waypoint search options. Enter a specific identifier or select one from the available search tabs.

FastFind Predictive Waypoint Entry

FastFind predicts a waypoint based on the characters you select. As you type, the key label changes to reflect the identifier of the nearest matching entry.

“No matches found” and “Duplicate found” annunciate when applicable. If no matches are found, “No suggestion” annunciates and the key is not selectable.

FastFind & Flight Plan

For convenience, use FastFind when creating your flight plan. The unit will search for waypoints closest to the current GPS position.

- If inserting a waypoint in the middle of the flight plan, the unit searches for waypoints between the next and previous waypoints.
- If adding a waypoint to the end, the unit searches for waypoints closest to the last waypoint in the flight plan.

FastFind is a convenient shortcut when you are adding waypoints to a flight plan or trying to find a waypoint in a hurry.
Navigation

Search Tabs

The **Find** key provides access to multiple search tabs. Each tab displays a list of selectable identifiers based on specific criteria.

The **Waypoint Search Tabs** include:

- **RECENT**
  Lists up to 20 of the most recently viewed waypoints.

- **NEAREST**
  Lists up to 25 waypoints within a 200 nm radius.

- **FLIGHT PLAN**
  Lists all waypoints contained in the active flight plan.

Each entry includes general information about the associated waypoint.

Tap **Filter** and select from the available filter options. Only waypoints belonging to the selected class appear in the list.

To list all classes, select **All**.
USER
Lists up to 1,000 user-defined waypoints.

SEARCH BY NAME
Lists all airports, NDBs, and VORs associated with the specified facility name.
Tap **Search Facility Name** to begin search.

SEARCH BY CITY
Lists all airports, NDBs, and VORs found in proximity of the city.
Tap **Search City Name** to begin search.
Create User Waypoints

Create and store up to 1,000 user defined waypoints.

FEATURE LIMITATIONS

• Duplicate user waypoint identifiers are not allowed
• Names may be up to six characters in length
• Comment may be up to 25 characters
• Maximum waypoint limit: 1,000

MAP POINTER KEY

Tapping any location on the map that is not a existing waypoint displays the Create Waypoint access key.

USER WAYPOINT IDENTIFIER

Assign a unique identifier or keep the unit generated identifier. By default, the identifier format is “USR” followed by a sequential three digit number.

User waypoints are helpful when ATC requests that you fly one radial to intercept another. While the point is often defined by an intersection in the navigation database, this is not always the case. The Create User Waypoint function allows you to define the new intersection and insert it into the flight plan in advance, as opposed to using the NAV radio to tune each VOR and specify the radials to fly inbound and outbound.
Define Waypoint Criteria

Active user waypoints already existing in a flight plan are not editable.

When creating a user waypoint, you have the option to:

- Create a user waypoint
- Assign a unique identifier
- Set the waypoint as temporary
- Enter a comment
- Set the waypoint position
- Edit the waypoint graphically

[1] Waypoint position options are mutually exclusive. Enabling one disables the other.

<table>
<thead>
<tr>
<th>User Identifier</th>
<th>Assign a unique identifier.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comment</td>
<td>Type a comment regarding the new waypoint.</td>
</tr>
<tr>
<td>Position</td>
<td>Set the waypoint position.</td>
</tr>
<tr>
<td>Graphical Edit</td>
<td>Open a preview map for graphical editing purposes. User waypoint icon remains stationary as you move the surrounding map to the new location.</td>
</tr>
<tr>
<td>Temporary</td>
<td>Assign the waypoint a temporary status. Identifier remains available until the next unit power cycle.</td>
</tr>
<tr>
<td>Create</td>
<td>Add the new identifier to the used waypoints list. The associated information page opens automatically for viewing and editing purposes.</td>
</tr>
</tbody>
</table>
**Navigation**

**COMMENT FORMAT**
Default comments display in a specific format for each reference type.

**LAT/LON**

```
<LAT> <LON>
```

**Radial/Distance**

```
<Waypoint><Radial> / <Distance>
```

**Radial/Radial**

```
<Waypoint 1><Radial 1> / <Waypoint 2><Radial 2>
```

**POSITION OPTIONS**
Set the Waypoint Position using one of the following options.

**Radial/Radial:**
Specify a waypoint and radial for each of the two reference points.

**Radial/Distance:**
Specify the reference waypoint, radial, and distance.

**LAT/LON:**
Specify the point’s latitude and longitude.
Edit an Existing User Waypoint

FEATURE LIMITATIONS
• User waypoints that are part of a flight plan are not editable

OPEN EDIT WAYPOINT PAGE
You can access the edit function multiple ways.

From the dedicated information page:
Home > Waypoint Info > User WPT > Specify an identifier, or tap View List and select an identifier from the used waypoints list > Edit

From the Nearest page:
Home > Nearest > User WPT > Select an identifier from the list (e.g., USR001) > Edit

From the Active FPL page:
Home > Flight Plan > Select the identifier from the flight plan > WPT Info > Edit

MODIFY POSITION VALUES
From the Edit WPT page, you can modify a user waypoint’s position one of two ways:

1. Tap Position > Latitude/Longitude > Specify the waypoint’s coordinates > Save.

OR

1. Tap Graphical Edit.
2. Hold and drag the basemap until the user waypoint icon appears over the desired location.
3. Tap Enter > Save.
Import User Waypoints

The Import Waypoints key appears when the unit detects a user waypoint on the datacard.

FEATURE LIMITATIONS

- User waypoint file size must not exceed 8 GB

NOTE

The import function overwrites any existing user waypoint of the same name.

CREATE USER WAYPOINT FILE

You may create a list of new user waypoints using any spreadsheet program. Read “User Waypoint File Considerations” for limitations and formatting specifications. Organize columns as follows.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>Waypoint Name</td>
<td>Comment</td>
<td>Latitude</td>
<td>Longitude</td>
</tr>
</tbody>
</table>

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>MTHOOD</td>
<td>MT HOOD PEAK</td>
<td>45.3723</td>
</tr>
<tr>
<td>2</td>
<td>CRTRLK</td>
<td>CRATER LAKE</td>
<td>42.94683</td>
</tr>
<tr>
<td>3</td>
<td>EIFFEL</td>
<td>EIFFEL TOWER</td>
<td>48.858151</td>
</tr>
<tr>
<td>4</td>
<td>OCFAN</td>
<td></td>
<td>32.68735672</td>
</tr>
</tbody>
</table>

User Waypoint File
User Waypoint File Considerations

- Limit one waypoint per row
- Names may be up to six characters in length
- Comments may be up to 25 characters
- All letters must be upper case
- Latitude: two digits left of decimal; up to nine digits right of decimal
- Longitude: three digits left of decimal; up to eight digits right of decimal
- (-) indicates southern latitudes (column C) or western longitudes
- Express latitude and longitude coordinates in decimal degrees

Save the file in the .csv format under the name “user.csv.” Change the file extension to “.wpt” before copying the file to a blank SD card.

IMPORT USER WAYPOINTS

1. Ensure that the unit power is off.
2. Insert datacard containing user waypoints.
3. Power on unit.
4. From the Home page, tap **Waypoint Info > Import Waypoints**.
5. Acknowledge the pop-up message.

The import function executes in the background. Once the import is complete, an advisory message informs: “User waypoints were imported successfully.”

The waypoints are now available for use. You may power down the unit and remove the SD card.

If an imported waypoint is within 0.0001 degree (latitude and longitude) of an existing user waypoint, the existing waypoint and name will remain in use.
Navigation

Nearest

View a list of the nearest waypoints, frequencies, or facilities within 200 nm of the aircraft’s position.

From the Home page:

1. Tap **Nearest** > Select a waypoint or frequency icon.
2. Scroll through the list of entries.

Information varies according to the selected waypoint or frequency type. Nearest waypoints provide an identifier key for accessing the associated information page.

**Nearest Airport**
- Identifier • symbol • distance • bearing • approach type
- length of longest runway

**Nearest Intersection**
- Identifier • symbol • distance • bearing

**Nearest Very High Frequency Omni-directional Range**
- Identifier • symbol • distance • bearing • frequency

**Nearest Visual Reporting Point**
- Identifier • symbol • distance • bearing

**Nearest Non-Directional Beacon**
- Identifier • symbol • distance • bearing • frequency

**Nearest User Waypoint**
- Identifier • symbol • distance • bearing
**Nearest Airspace**  
- Identifier • symbol • proximity

**Nearest Air Route Traffic Control Center**  
- Facility name • distance • bearing • frequency

**Nearest Flight Service Station**  
- Facility name • distance • bearing • frequency  
  (“RX” denotes receive-only frequencies)

**Nearest Weather Frequency**  
- Facility name • distance • bearing  
  • frequency of nearest ATIS, ASOS, and AWOS

### ENTRY LIMITS

<table>
<thead>
<tr>
<th>NEAREST LIST</th>
<th>ENTRY LIMIT</th>
</tr>
</thead>
<tbody>
<tr>
<td>ARTCC, FSS</td>
<td>05.</td>
</tr>
<tr>
<td>Airspace</td>
<td>20.</td>
</tr>
<tr>
<td>Airport, Intersection, VOR, VRP, NDB, User, Weather FREQ</td>
<td>25</td>
</tr>
</tbody>
</table>

The number of entries displayed varies according to item type. Entries are ordered from closest to farthest.

### UPDATE INTERVALS

With the exception of nearest airspace, all lists update every 30 seconds. The nearest airspace list updates once per second.

### MULTIPLE FREQUENCIES

This key displays when more than one frequency is available at the indicated range. Applicable to functions displaying information only (ARTCC, FSS, and WX FREQ).
Navigation

Procedures

Lateral and vertical guidance is available for visual and GPS/RNAV approaches. The published instrument approach procedures allow precision and non-precision approaches to airports and are directly accessible from the Procedures (PROC) icon.

FEATURE REQUIREMENTS
• Baro-corrected altitude source (automatic sequencing of altitude leg types)
In the absence of baro-corrected altitude data, altitude leg types require manual sequencing.

FEATURE LIMITATIONS
• The flight plan allows only one procedure to be loaded at a time. Adding a new procedure overwrites any existing procedure.

LOAD A PROCEDURE

Select a procedure type, then define the criteria for that procedure on the corresponding setup page.
By default, these keys display underscores.

Upon completion, the specified airport and procedure appear on the associated key.

When loading a procedure, always remember to check the runway, transition, and all waypoints.

COMMON PAGE CONTROLS
All procedure pages provide the following setup controls.
Airport: Select an airport for the procedure.
Transition: Select a transition.
Runway: Select a runway for the selected airport.
Preview: View a 2-D map of the surrounding area (includes SafeTaxi airport depictions).

For page specific controls, refer to the appropriate procedure description.
Flight Procedure Basics

NOTE

Advisory climb altitudes for SIDs may not match charted altitudes. Do not rely solely on advisory altitudes.

- Always check the runway, transition, and waypoints for all procedures.
- Heading legs indicate in white as “HDG XXX°” on flight plans.
- The unit provides lateral and, when appropriate, vertical guidance for visual and GPS/RNAV approaches.
- Use Map as an aid to situational awareness during ILS, VOR, NDB, and non-precision localizer-based approaches. A magenta line depicts the active leg (or the portion of the approach currently in use).
- Always use the appropriate radio navigational aid for primary approach course guidance during non-GPS approaches.
- Check the annunciator bar for the current phase of flight.
- Many non-precision approaches have GPS overlays, improving accuracy so that approaches do not require overflying a VOR or NDB.
- The unit guides you through complex overlay approaches, automatically sequencing each leg up to the missed approach point.
- Fly approaches as published with the full transition using any published feeder route or initial approach fix, or with a vectors-to-final transition.
- While not required under TSO-C146e, an optional baro-corrected altitude source is recommended for automatic sequencing of altitude leg types.

When adding procedures to a flight plan:
- Arrange procedures around the existing flight plan as follows: Departure, En route, Arrival, Approach
- Insert departure waypoints before en route waypoints
- Insert arrival waypoints between en route and approach waypoints
- Always verify that the transition waypoints between each phase are correct

Map complements your printed approach plates by improving situational awareness during the approach. It does not replace printed approach plates. **Always fly an approach as it appears on the approach plate.**
**Navigation**

**Roll Steering Autopilots**

Roll steering terminates when approach mode is selected on the autopilot. It becomes available once you initiate the missed approach.

---

**TO/FROM LEGS ON CDI**

<table>
<thead>
<tr>
<th>TO Legs</th>
<th>FROM Legs</th>
</tr>
</thead>
<tbody>
<tr>
<td>On these legs, the FROM/TO flag on the CDI indicates “TO” and the Distance field on the flight plan decreases as you navigate the leg.</td>
<td>On these legs, the FROM/TO flag on the CDI indicates “FROM” and the Distance field on the flight plan increases as you navigate the leg.</td>
</tr>
<tr>
<td>Most legs are this type</td>
<td>From legs are typically found on procedure turns and on some missed approach procedures.</td>
</tr>
</tbody>
</table>

**Composite CDI.** When interfaced to a composite type CDI, the composite CDI flag shows only “TO” indications. Always refer to the FROM/TO field on the annunciator bar when using composite CDI.
GPS Flight Phase Annunciations

Phase of flight annunciations are a direct indication of the current CDI behavior for the selected navigation source.

Not all annunciations are available for every navigator.

<table>
<thead>
<tr>
<th>ANNUNCIATION</th>
<th>FLIGHT PHASE</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.30 NM</td>

  • CDI scaling is identical to LPV approaches |
Departures

Loading a Departure into Flight Plan

- Always load the departure at the departure airport in the flight plan
- Flight plans allow only one departure procedure at a time
- Loading a departure when one is already present will replace the existing entry
- Selecting a departure, transition waypoint, and runway defines the route

FEATURE LIMITATIONS
- Vector-only departures are not available in the Procedures database

PAGE SPECIFIC CONTROLS

From the Home page:
1. Tap PROC > Departure.
2. Confirm the selected airport. If necessary, tap Airport and choose an airport using the provided search options.
3. Tap Departure > Select a departure from the list.
4. Tap Transition > Select a transition.
5. Tap Runway > Select a runway.
6. Tap Preview > Review the departure diagram and sequence list.
7. Tap Load Departure. The Active FPL page opens.
8. Scroll the flight plan to view all departure waypoints.

To change or remove the departure:
- Tap the existing flight plan departure
- Select a different one.

OR
- Tap Remove Departure.
Flight Plan Departure Options

Selecting a departure on the flight plan opens a menu. Changes to the active flight plan take effect immediately.

- Select a new departure
- Remove the selected departure from the flight plan
Arrivals

Loading an Arrival into Flight Plan

- Load a Standard Terminal Arrival (STAR) at any airport with a published arrival procedure
- Flight plans allow only one arrival procedure at a time
- Loading an arrival when one is already present will replace the existing entry
- Selecting an arrival, transition waypoint, and runway defines the route

PAGE SPECIFIC CONTROLS

- **Load Arrival**: Loads arrival procedure into the active flight plan.
- **Activate Arrival**: Activates the loaded arrival procedure.
- **Remove Arrival**: Removes the loaded arrival procedure.

SELECT AN ARRIVAL

From the Home page:

1. Tap **PROC > Arrival**.
2. Confirm the selected airport. If necessary, tap **Airport** and choose an airport using the provided search options.
3. Tap **Arrival > Select an arrival from the list**.
4. Tap **Transition > Select a transition**.
5. Tap **Runway > Select a runway**.
6. Tap **Preview > Review the arrival diagram and sequence list**.
7. Tap **Load Arrival**. The Active FPL page opens.
8. Scroll the flight plan to view all arrival waypoints.

To change or remove the arrival:

- Tap the existing flight plan arrival.
- Select a different one.

OR
- Tap **Remove Arrival**.
Navigation

Flight Plan Arrival Options

Selecting an arrival on the flight plan opens a menu. Changes to the active flight plan take effect immediately.

- Select a new arrival
- Remove the selected arrival from the flight plan
Approaches

Loading an Approach into Flight Plan

- Always check the runway, transition, and all waypoints
- Flight plans allow only one approach procedure at a time
- You may load an alternate approach during a missed approach procedure (flight plan retains all missed approaches)
- Loading an approach when one is already present will replace the existing entry
- Selecting an approach, transition waypoint, and runway defines the route

PAGE SPECIFIC CONTROLS

Load Approach: Loads approach procedure into the active flight plan.
Activate Approach: Activates the loaded approach procedure.
Remove Approach: Removes the loaded approach procedure.
Channel/ID: Loads an SBAS approach based on the specified channel.

SELECT AN APPROACH

From the Home page:

1. Tap **PROC > Approach**.
2. Confirm the selected airport. If necessary, tap **Airport** and choose an airport using the provided search options.
3. Tap **Approach > Select an approach from the list**.
4. Tap **Transition > Select a transition**.
5. Tap **Runway > Select a runway**.
6. Tap **Preview > Review the approach diagram and sequence list**.
7. Tap **Load Approach**. The Active FPL page opens.
8. Scroll the flight plan to view all approach waypoints.
SBAS APPROACHES

Channel ID Key
- Select the channel ID for an SBAS approach to the current destination
- Provides an alternate means of loading an approach.
- IDs are available from an approved approach chart
- In the case of duplicate numbers, select an approach from the provided list

To load an SBAS approach:
1. Tap Channel/ID.
2. Specify an approach channel.

If present, both channel and ID load automatically.

SUSPENDED APPROACH PROCEDURE ANNUNCIATION

“SUSP” indicates that automatic sequencing of approach waypoints is suspended on the active leg. This annunciation appears in the procedure field of the annunciator bar.

Suspended approaches typically occur during:
- Holding patterns
- Crossing the missed approach point
- Climb to altitude legs
- Hold to altitude legs

To change or remove the approach:
- Tap the existing flight plan approach.
- Select a different one.
- Tap Remove Approach.
PROCEDURE TURNS

**Roll Steering & Procedure Turns**

The steering provided for a procedure turn does not guarantee that the aircraft will stay within the charted procedure turn boundaries. Always be sure to fly within the confines of the charted procedure.

A procedure turn is stored as another approach leg. It does not require any special operations other than flying the procedure itself.

Roll steering is available for aircraft with a compatible autopilot.

**Flight Plan Approach Options**

Selecting an approach on the flight plan opens a menu. Changes to the active flight plan take effect immediately.

- Activate the selected approach
- Activate vectors to final for the selected approach
- Activate a missed approach
- Select a new approach
- Remove the selected approach from the flight plan

**Approach Options**

- Activate Approach
- Activate Vectors to Final
- Activate Missed Approach
- Select Approach
- Remove Approach
Missed Approach
The method for activating a missed approach depends on your position in relation to the missed approach point.

BEFORE MISSED APPROACH POINT
Select Activate Missed Approach. This function is available in two applications:
Active FPL:
Home > Flight Plan > Select the approach > Activate Missed Approach
OR
Procedures:
Home > Procedures > Activate Missed Approach

Once selected, guidance continues along an extension of the final approach course (i.e., final approach fix to missed approach point).
The unit automatically sequences to the first leg of the missed approach. This allows you to execute the missed approach prior to reaching the missed approach point.

AFTER MISSED APPROACH POINT
Upon reaching the missed approach point, a pop-up presents two options.

To continue with sequencing suspended, tap Remain Suspended.
To receive guidance to the missed approach hold point, tap Activate GPS Missed Approach.
Approach Hold

Selecting an approach hold on the flight plan opens a menu. Changes to the active flight plan take effect immediately.

- Activate the selected hold
- Insert a waypoint after the hold
- Edit hold details
- Exit the holding pattern before the timer expires
- Remove the selected hold from the flight plan

### ACTIVATE HOLD

1. Select the hold.
2. Tap **Activate Hold**.
3. Confirm the request.

### REMOVE HOLDING PATTERN

1. Select the hold.
2. Tap **Remove**.
3. Confirm the request.

### EXIT HOLDING PATTERN

1. Tap **SUSP**.
2. Select the hold.
3. Tap **Exit Hold**.
4. Confirm the request.
NON-REQUIRED HOLDING PATTERNS

Upon activating an RNP GPS approach, decide whether to skip non-required holding patterns during the initial transitions of the approach. A pop-up presents two options.

Selecting Yes adds the hold to the flight plan.
Preview shows the hold in white.

Selecting No means the hold is not included in the flight plan.
Preview shows the hold in gray.

Timer/Distance field displays on the active flight plan (refer here when flying the outbound portion of the holding pattern). Holding pattern appears on Map with the active flight plan leg indication.

CROSSING MISSED APPROACH POINT

When crossing the missed approach point:

- “SUSP” annunciation indicates that approach waypoint sequencing is suspended at the missed approach point
- FROM/TO flag on the CDI indicates “From” for non-composite CDIs
- FROM/TO field on the annunciator bar indicates “FR”
- Course guidance continues along the final approach course

If you need to go around the holding pattern again to lose extra altitude or speed, tap SUSP to manually suspend waypoint sequencing before crossing the holding waypoint the second time.
If you have already passed the waypoint, re-activate the holding pattern.
DME Arc

DME Arc Approaches

- Left/right guidance relative to the arc
- Manual arc leg activation once aircraft is near the arc

The unit supports approaches containing DME arcs.

To manually activate DME Arc, the aircraft must be within the shaded area.
RF Legs

AC 90-101A - RF Legs

AC 90-101A defines RF leg as “A constant radius circular path, around a defined turn center, that starts and terminates at a fix. An RF leg may be published as part of a procedure.”

The unit supports radius-to-fix (RF) legs associated with RNAV RNP 1.0 non-AR approaches, when approved by the installation.

Flying a radius-to-fix approach is similar to flying a DME arc approach (status indications are identical).

Unlike DME arcs, however, RF legs are not based on a VOR. They may have varying radii, making them larger or smaller than arc legs.

For details regarding RF legs for specific aircraft, consult the AFMS.

Vectors to Final

Activating the approach with vectors to final displays an extension of the final approach course on Map.

Magenta depicts the active leg of the flight plan.

CDI needle remains off center until you are established on the final approach course. As a reminder, “vtf” annunciates as part of the active leg on the GPS Nav status key.

Activating vectors-to-final while on the From side of the final approach fix suspends automatic waypoint sequencing. “SUSP” annunciates at the bottom of the screen. Sequencing resumes once the aircraft is on the To side of the final approach fix and within full-scale deflection.
**ILS Approach**

**NOTE**

*ILS and LOC approaches are not approved for GPS. GPS guidance is for monitoring purposes only.*

Selecting an ILS or LOC approach results in a pop-up message. Activate the approach or select a different one.

Do not attempt to use the unit as the primary navigation source during ILS approach.
Navigation

RNAV Approaches
Fly RNAV approaches according to the published chart. Supported approaches include:

- LNAV/VNAV
- LNAV
- LNAV+V
- LP
- LPV
- LP+V

LNAV APPROACH
RNAV non-precision lateral navigation approach.

LNAV+V APPROACH
RNAV non-precision LNAV approach with advisory vertical guidance.

The glidepath is a light dashed line on the vertical profile (Jeppesen charts only) with an associated glidepath angle (usually in the 3.00 degree range) to assist in maintaining a constant vertical glidepath, similar to an ILS glideslope.

CDI Full-scale Deflection

CDI scale varies when VTF is active.
LPV APPROACH
Localizer performance with vertical guidance. Similar to flying the standard ILS approach.

This segment describes a typical LPV approach sequence and the necessary pilot actions.

Within 31 nm of destination:
- Mode switches from En Route to Terminal
- CDI scale transitions from 2.0 nm to 1.0 nm, full-scale deflection

Approaching initial approach fix:
- Waypoint message annunciates
- Time to Turn advisory annunciates and 10 second timer counts down as the distance approaches zero

Approaching final approach fix:
- Mode switches from Terminal to LPV

2.0 nm from final approach fix:
- CDI scaling tightens from 1 nm to the approach-defined angular full-scale deflection

60 seconds before final approach fix:
- System verifies GPS position integrity is within approach limits

CDI Full-scale Deflection

1.0 nm

2.0 nm

FAF

Angle based on database info

Landing Threshold

Course Width

0.3 nm

CDI scale varies when VTF is active.
Navigation

If GPS integrity exceeds the horizontal and/or vertical alarm limits:

- Approach downgrades to non-precision
- "LNAV" appears in the annunciator bar to inform of the change if there are LNAV minimums for the approach
- Advisory message: "GPS approach downgraded. Use LNAV minima."
- Glideslope indication disappears
- Pilot continues approach using LNAV non-precision minimums, if applicable

If GPS integrity does not meet the non-precision horizontal alarm limits:

- Advisory message: "Abort Approach. GPS approach is no longer available."
- Pilot acknowledges message
- Unit reverts to terminal limits of 1 nm to support navigation to the missed approach

After the aircraft passes final approach fix:

- Approach aborts due to a loss of WAAS integrity
- Pilot captures the glideslope (method is same as for ILS glideslope)

When crossing the final approach fix:

- Waypoint sequences to the missed approach point (e.g., RW31, the runway threshold)
- Pilot flies toward missed approach point, keeping the needle on the external CDI (or HSI) at center, and observing published altitude minimums
- Final course segment becomes the active flight plan leg

Approaching missed approach point:

- Advisory message: "Arriving at Waypoint."

Crossing missed approach point:

- Sequencing suspends
- Pop-up message: "Missed Approach Waypoint Reached"
- Pilot decides whether to remain suspended or activate the missed approach
  - Tapping Remain Suspended allows you to continue with sequencing suspended
  - Tapping Activate GPS Missed Approach allows you to continue with guidance to the missed approach hold point

Prepare aircraft for missed approach operation:

- Pilot taps UNSUSP (sequences missed approach), then follows the unit provided guidance to the missed approach hold point and holds
LP APPROACH

Points About LP Approaches

- Use SBAS accuracy, making them similar to an LNAV approach but more precise
- Combine the lateral accuracy of an LPV approach with the angular scaling of a localizer approach
- Often contain step-down altitudes
- Always result in a minimum descent altitude and missed approach point

This segment describes a typical LP approach sequence and the necessary pilot actions.

Within 30 nm of destination:

- Mode switches from En Route to Terminal
- CDI scale transitions from 2.0 nm to 1.0 nm, full-scale deflection

Approaching initial approach fix:

- Turn direction message annunciates
- Time to Turn advisory annunciates and 10 second timer counts down as the distance approaches zero

Approaching final approach fix:

- Unit begins to automatically rescale in an angular fashion, allowing you to fly as you would a standard localizer approach

2.0 nm from final approach fix:

- CDI scaling tightens from 2 degrees or 0.3 nm full-scale deflection, whichever is smaller

60 seconds before final approach fix:

- System verifies GPS integrity is within the horizontal limits to complete the LP non-precision approach
If GPS integrity exceeds the horizontal alarm limits:

- Approach downgrades to non-precision
- “LNAV” annunciates to inform of the change
- Advisory message: “GPS approach downgraded. Use LNAV minima.”
- Pilot continues approach using LNAV non-precision minimums, if applicable

If GPS integrity does not meet the non-precision horizontal alarm limits:

- Advisory message: “Abort Approach. GPS approach is no longer available.”
- Pilot acknowledges message
- Unit reverts to terminal limits of 1 nm to support navigation to the missed approach

If the approach indicates “LP+V,” then advisory vertical guidance may be removed without annunciation. This is due to the vertical guidance not being within tolerances. This does not constitute a downgrade. You may still fly the approach to LP minimums.

When crossing the final approach fix:

- Waypoint sequences to the missed approach point (e.g., RW31, the runway threshold)
- Pilot flies toward missed approach point, keeping the needle on the external CDI (or HSI) at center, observing published altitude minimums
- Final course segment becomes the active flight plan leg

Approaching missed approach point:

- Advisory message: “Arriving at Waypoint.”

At the missed approach point:

- Pilot initiates missed approach, if necessary
Crossing missed approach point:
  • Sequencing suspends
  • Pop-up message: “Missed Approach Waypoint Reached”
  • Pilot decides whether to remain suspended or activate the missed approach
    • Tapping **Remain Suspended** allows you to continue with sequencing suspended
    • Tapping **Activate GPS Missed Approach** allows you to continue with guidance to the missed approach hold point

Prepare aircraft for missed approach operation:
  • Pilot taps **UNSUSP** (sequences missed approach)

**NOTE:** For missed approaches with heading legs, fly manually until you reach the first active course leg.
  • Pilot follows the unit provided guidance to the missed approach hold point and holds

**LP+V**

Flying an LP approach with advisory vertical guidance (LP+V) does not change how the approach should be flown. The pilot is still responsible for descending to the correct altitude at each step down.

The result is still an MDA and missed approach point.
Navigation

Visual Approach

Points About Visual Approaches

• Provide advisory horizontal and optional vertical guidance for the selected runway
• Lateral guidance is always provided for visual approaches
• Helps stabilize the runway approach
• Three methods for loading and activation

FEATURE REQUIREMENTS
• Valid terrain database

FEATURE LIMITATIONS
• Not all airports in the database support visual approaches
• Only external CDI/VDI displays provide vertical deviation indications

Published data is used to determine the visual approach GPA and threshold crossing height (TCH) for the selected runway. If no published data is available, the default is 3 degrees GPA and 50 ft TCH.

You may load and activate a visual approach from the following apps.

• Map
• Procedures
• Waypoint Info

Upon loading the visual approach, a pop-up informs when vertical guidance is available. If available, the pop-up contains the glidepath angle (GPA) and threshold crossing (TCH).

If unavailable, it reads: “NO VERTICAL GUIDANCE”

Terrain and obstacle obstructions along the approach path determine the availability of vertical guidance advisories for visual approaches.

• If no known obstructions are within the approach path, vertical guidance is provided to a maximum distance of 28 nm from the runway.
• If there are known obstructions further than 3 nm, but within the 28 nm maximum distance from the runway along the approach, vertical guidance is limited to the approach path after crossing the known obstructions. After loading the approach, a shortened magenta line shows on the map.

If obstructions are within 3 nm to the runway, along the approach path, advisory vertical guidance is not available.
LOAD A VISUAL APPROACH FROM MAP
When the aircraft is within 10 nm of the destination airport, the Visual Approach selector key becomes active. This key may appear in one of two places:

On the map or at the left of the screen if the supporting airport is selected.

1. Select the airport icon.
2. Tap Visual.
3. Select from the list of available visual approaches.

Once selected, the visual approach immediately loads and activates.

For more about Visual Approach key configuration, refer to Visual Approach.

LOAD A VISUAL APPROACH FROM PROCEDURES
Two methods:
Home > PROC > Approach
OR
Home > Waypoint Info > Airport > PROC > Select an approach (similar to published instrument approaches)
Autopilot Outputs

**CAUTION**

Engage the autopilot heading mode and set the heading bug appropriately to use the autopilot on heading legs using the autopilot’s NAV, GPSS, or APR mode. Not all autopilots follow guidance on these leg types. Some revert to a roll only or wings level mode.

**FEATURE REQUIREMENTS**
- Availability dependent upon configuration

**FEATURE LIMITATIONS**
- Applicable to King KAP 140 and KFC 225 autopilots

Outputs for the King KAP 140/KFC 225 autopilot units require manual activation. If configured, this function prompts you to enable autopilot outputs during the approach procedure.

GNX 375 shown as typical.

Once enabled, the unit provides guidance information consistent with what the autopilot expects (i.e., angular CDI scaling and glideslope capture for LPV or other vertically guided GPS approaches).

**ENABLE AUTOPILOT OUTPUTS**

1. Acknowledge the advisory message.
2. Tap **Enable APR Output**.
3. Follow the unit provided guidance.
4 Planning

VERTICAL CALCULATOR ................................................................. 4-3
FUEL PLANNING ........................................................................ 4-5
DALT/TAS/WIND CALCULATOR .................................................. 4-8
RAIM PREDICTION ...................................................................... 4-11
This section describes features that make flight planning easier and more efficient.

Planning apps and setup functions reside in the system Utilities.
Vertical Calculator

Calculate time to TOD and vertical speed required to reach target altitude at the specified location.

WARNING

Do not rely on VCALC messages as the only means of either avoiding terrain/obstacles or following ATC guidance. VCALC provides advisory information only and must be used in concert with all other available navigation data sources.

FEATURE LIMITATIONS

This feature is inhibited when:

- Groundspeed is < 35 knots
- No active flight plan or direct-to destination is available
- One of the following modes is active: SUSP, Vectors-to-Final, OBS
- Navigating to a waypoint after the FAF

VCALC Page

The Vertical Calculator (VCALC) feature is helpful when you want to descend to a certain altitude near an airport.

Create a 3-D profile to guide you from your present position and altitude to a final (target) altitude at a specified location. Once defined, you may configure message alerts and additional data on the Map page to stay informed of your progress.
Planning

Target ALT
- Specify the final (target) altitude for the course

Altitude Type
- Altitude reference used for VCALC calculations
- Toggles between “MSL” and “Above WPT”
- Above WPT is available for airports only

VS Profile
- Specify the vertical speed value

Offset
- Distance value representing the geographical location at the target altitude
- Distance is measured from the target waypoint

Before/After
- Indicates whether the offset distance defines a point before or after reaching the target waypoint
- “After” indication not available for the last destination in flight plan

Target Waypoint
- Reference location specified in the flight plan or active direct-to that will be used for planning a descent
- When using a flight plan, the target waypoint is a reference that can be specified from the waypoints in the flight plan
- Last waypoint in the flight plan is the default target setting

STATUS
VCALC status messages display here.

VS REQUIRED
Displays the vertical speed required to reach the target altitude at the specified offset.

VCALC Setup

VCALC Menu
- Tap Menu to access controls for:
  - Restoring default page settings
  - Displaying VCALC related advisory messages

RESTORE DEFAULTS
Resets VCALC page settings to their default values. Excludes Target Waypoint.

DISPLAY MESSAGES
Allows VCALC related advisory messages to display on the Messages page.
Fuel Planning

View fuel conditions along any flight plan (active or programmed) or between two waypoints (including the active direct-to).

Fuel Planning Page

The fuel planning feature computes fuel conditions based on route, ground speed, fuel on board, and fuel flow.

Fuel Planning Modes

Tapping **Mode** toggles the active fuel planning mode between Point to Point and Flight Plan. Point to Point is the default mode setting.

<table>
<thead>
<tr>
<th>Point-to-Point Mode</th>
<th>Flight Plan Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calculate fuel between two waypoints in the database, or between the aircraft's present position and a selected waypoint.</td>
<td>Calculate fuel for a specific flight plan leg, or for the cumulative flight plan.</td>
</tr>
</tbody>
</table>

Use the mode specific controls to define the flight path (leg or route). Required input values are dependent upon mode selection.

Fuel on board, fuel flow, and ground speed data are required independent of mode selection.

For Planning Purposes Only

- Fuel on Board and Fuel Flow are pilot specified values. They are not a direct indication of actual aircraft fuel on board or fuel flow.
- Fuel Required to <destination> is a calculated prediction based on pilot specified values. It is not a direct indication of actual fuel quantity once the aircraft reaches its destination.
- All data entries on this page are used exclusively by the Fuel Planning app.
- Fuel computations are for planning purposes only.
### Planning

<table>
<thead>
<tr>
<th>MODE</th>
<th>SELECTION</th>
<th>DESCRIPTION</th>
</tr>
</thead>
</table>
| **Point-to-Point** | **P. Position** | • Enters the current aircraft coordinates as the departure location (or From waypoint)  
• Aircraft latitude and longitude fields replace the From waypoint key |
|              | **From**  | • Specify a waypoint from the database as the departure location (or From waypoint)  
• Not available when P. Position is active |
|              | **To**    | • Specify a waypoint from the database as the destination (or To waypoint) |
| **Flight Plan** | **Flight Plan** | • Opens a list of available flight plans  
• Options include the active flight plan or one from the catalog  
• Defaults to the active flight plan if no selection is made |
|              | **Leg**   | • Options dependent on flight plan selection  
• Defaults to cumulative leg option if no selection is made |
|              | **Fuel on Board** | • Specify the amount of fuel on board (gallons)  
• This amount decreases once per second based on specified fuel flow value |
|              | **Fuel Flow** | • Specify the current fuel flow rate (gallons per hour) |
| **Both**     | **Use Sensor Data** | • Utilize current GPS ground speed data |
|              | **Ground Speed** | • Behavior based on state of Use Sensor Data  
**Use Sensor Data key inactive:**  
• Function selectable  
• Specify ground speed  
**Use Sensor Data key active:**  
• Function not selectable  
• Displays current GPS ground speed when the Use Sensor Data key is active  
• This value is used to calculate fuel statistics when you press the Compute key |

Adjust fuel on board and fuel flow values as necessary to account for changes in performance.
## Computing Fuel Statistics

Compute and display fuel data based on the selected fuel planning mode and specified input values.

<table>
<thead>
<tr>
<th>Fuel Req for Leg</th>
<th>Fuel after Leg</th>
<th>RSV after Leg</th>
</tr>
</thead>
<tbody>
<tr>
<td>7.1 GAL</td>
<td>92.8 GAL</td>
<td>09:16:59</td>
</tr>
<tr>
<td>Range</td>
<td>Efficiency</td>
<td>Endurance</td>
</tr>
<tr>
<td>1299 NM</td>
<td>13.0 NM/GAL</td>
<td>09:59:19</td>
</tr>
</tbody>
</table>

Statistics for the selected leg or route display on a dedicated data page. This information is for planning purposes only.

Tap **Next** or **Prev** to view statistics for other legs in the flight plan (if applicable).

Statistics include:
- Fuel required for leg
- Reserve after leg
- Efficiency
- Fuel after leg
- Range
- Endurance

### COMPUTE FUEL STATISTICS

1. Select a fuel planning mode.
2. Define a leg or route.
   - If “Flight Plan” is set, select the flight plan and leg. Selecting the active flight plan sets the starting waypoint at the aircraft’s current position.
   - If “Point to Point” is set, select From and To waypoints, or use the aircraft’s current position as the From waypoint.
3. Specify the amount of fuel on board and average fuel flow rate.
4. Specify ground speed or elect to use sensor data.
5. Tap **Compute**.
Planning

# DALT/TAS/Wind Calculator

Calculate density altitude, true airspeed, and winds.

## FEATURE REQUIREMENTS

- Fuel/air data computer (pressure altitude)
- Valid sensor data

## DALT/TAS/Wind Page

This feature indicates the theoretical altitude at which the aircraft performs based on several input variables.

## Editing Input Data

Available selections are dependent on sensor data use. TAT and HDG may also be available via an external data source.

<table>
<thead>
<tr>

| **TAT**            | • Specify true air temperature  
                      • Use +/- keys to indicate above or below 0º |
| **HDG**            | • Specify heading value                                                     |
| **TRK**            | • Specify track angle value \(^{[2]}\)                                     |
| **Use Sensor Data**| • Inputs reference values  
                      (internal or received from air data computer)  
                      • Replaces indicated altitude with pressure altitude  
                      received from fuel/air data computer  
                      • Excludes TAT and HDG                                     |
| **Ground Speed**   | • Specify ground speed \(^{[2]}\)                                           |

\(^{[1]}\) Toggles to Pressure ALT indication when sensor data in use.  
\(^{[2]}\) Not selectable when sensor data in use.  
\(^{[3]}\) This field is absent when sensor data is in use.
Computing DALT/TAS/Wind Statistics

Compute and display density altitude and current wind conditions. Calculations are based on current input values.

Statistics display on a dedicated data page. This information is for planning purposes only. Dashes indicate when input values are invalid.

<table>
<thead>
<tr>
<th>Density ALT</th>
<th>TAS</th>
</tr>
</thead>
<tbody>
<tr>
<td>2229 FT</td>
<td>206 KT</td>
</tr>
<tr>
<td>Wind Direction</td>
<td>Wind Speed</td>
</tr>
<tr>
<td>021°</td>
<td>7 KT</td>
</tr>
<tr>
<td>Head Wind Component</td>
<td>6 KT</td>
</tr>
</tbody>
</table>

Density Altitude
- Pressure altitude corrected for nonstandard temperature
- Units display in increments of ten

Wind Data
- Wind direction and speed
- Headwind
- Tailwind
- True air speed

Density altitude and true airspeed calculations are dependent on indicated altitude, barometric pressure, and total air temperature.
Wind data calculations are dependent on true airspeed, aircraft heading, and ground speed.
Wind direction is dependent on the NAV Angle system unit setting.
If wind speed is zero, wind direction displays as dashes.
RAIM Prediction

Determine GPS coverage availability for the current location or a specified waypoint at any time and date. RAIM performs checks to ensure the navigator has adequate satellite geometry during flight.

NOTE

RAIM availability prediction is for use in areas where WAAS coverage is not available. It is not required in areas where WAAS coverage is available.

FEATURE REQUIREMENTS

• Active flight plan and off-route direct-to waypoint (arrival date and time)

FEATURE LIMITATIONS

FAA’s TSO requirements for non-precision approaches specify significantly greater satellite coverage than is required during other phases of flight. As a result, RAIM may not be available for all approaches.

RAIM prediction results are valid for up to 90 days from the current date. Arrival dates beyond 90 days, or in the past, may not provide accurate results.

This feature predicts the availability of fault detection integrity. It cannot predict the availability of LPV or L/VNAV approaches.

Use a non-GPS based approach when RAIM is not available. To determine WAAS availability, including for LPV approaches, visit the FAA’s NOTAM service.

RAIM Prediction Page

The RAIM feature can help you plan for a pending flight by confirming GPS operation before an approach.

RAIM Features

• Automatically monitors RAIM during approach operations and warns when RAIM is not available
• Near 100% availability in Oceanic, En route, and Terminal phases of flight
• Waypoint Identifier, Arrival Date, and Arrival Time setup keys
• Compute RAIM key
Planning

Calculating RAIM Status

Calculate RAIM availability for the specified waypoint, date, and time. Prediction results annunciate once the calculation is complete.

WAYPOINT SEARCH OPTIONS

A Waypoint Identifier key allows you to specify a destination airport using multiple search options.

ARRIVAL DATE & TIME

These setup controls allow you to set the expected date and time of arrival at the specified airport. Values default to the current date and time in the absence of an active flight plan and off-route direct-to waypoint.

CHECK RAIM AVAILABILITY

1. Specify a destination waypoint.
2. Specify the expected arrival date and time.
3. Tap Compute RAIM.

RAIM Status Indications

Dashes indicate when the destination waypoint is invalid.

<table>

</table>
5 Hazard Awareness

WEATHER AWARENESS ................................................................. 5-3
TRAFFIC AWARENESS ................................................................. 5-23
TERRAIN AWARENESS ................................................................. 5-35
Menu selections vary based on features and optional equipment installed with Garmin avionics.

[1] GPS 175/GNC 355: Feature availability dependent upon unit configuration. Requires external ADS-B In product (GDL 88, GTX 345) and FIS-B.
Weather Awareness

**WARNING**

*Do not rely solely on datalink weather for weather information. Datalink weather provides a snapshot in time. It may not accurately reflect the current weather situation.*

**NOTE**

*Datalink weather is not intended to replace weather briefings or in-flight weather reports from AFSS or ATC.*

**FEATURE REQUIREMENTS**

- GPS 175/GNC 355 with UAT receiver (GDL 88, GTX 345) and FIS-B
- OR
- GNX 375 and FIS-B

The FAA provides FIS-B as a Surveillance and Broadcast Service operating on the UAT (978 MHz) frequency band. FIS-B uses a network of FAA-operated ground-based transceivers to transmit weather datalink information to the aircraft’s receiver on a scheduled continuous basis.

The Flight Information Service-Broadcast (FIS-B) Weather service is freely available for aircraft equipped with a capable datalink universal access transceiver (UAT). Ground stations provide uninterrupted services for the majority of the contiguous U.S., Hawaii, Guam, Puerto Rico, and parts of Alaska. No weather subscription service is required. For the latest FAA ground station coverage information, visit: [www.faa.gov/nextgen/programs/adsb/](http://www.faa.gov/nextgen/programs/adsb/)

**Data Transmission Limitations**

FIS-B broadcasts provide weather data in a repeating cycle which may take several minutes to completely transmit all available weather data. Therefore, not all weather data may be immediately present upon initial FIS-B signal acquisition.

**Line of Sight Reception**

To receive FIS-B weather information, the aircraft’s datalink receiver must be within range and line-of-sight of an operating ground-based transceiver. Reception may be affected by altitude, terrain, and other factors. Per the FAA, much of the United States has FIS-B In airborne coverage at and above 3,000 feet AGL. Terminal coverage is available at altitudes below 3,000 feet AGL and is available when flying near approximately 235 major U.S. airports. Surface coverage allows FIS-B ground reception at approximately 36 major U.S. airports.
Hazard Awareness

Per FAA TSO-C157b

FIS-B information may be used for pilot planning decisions focused on updating the pilot's awareness of the dynamic flight environment; including avoiding areas of inclement weather that are beyond visual range and pilot near-term decisions where poor visibility precludes visual acquisition of inclement weather. FIS-B weather and NAS status information may be used as follows:

a. To promote pilot awareness of ownship location with respect to reported weather, including hazardous meteorological conditions; NAS status indicators to enhance pilot planning decisions; and pilot near-term decision-making.

b. To cue the pilot to communicate with Air Traffic Control, Flight Service Station specialist, operator dispatch, or airline operations control center for general and mission critical meteorological information, NAS status conditions, or both. FIS-B information, including weather information, NOTAMs, and TFR areas, are intended for the sole purpose of assisting in long-/near-term planning and decision making. The system lacks sufficient resolution and updating capability necessary for aerial maneuvering associated with immediate decisions. In extreme scenarios, the oldest weather radar data on the display can be up to 15 to 20 minutes older than the display’s age indication for that weather radar data. Therefore, do not attempt to use FIS-B weather information to maneuver the aircraft at minimum safe distances from hazardous weather. FIS-B information must not be used in lieu of a standard preflight briefing.

c. FIS-B uplink is a subscription-free FIS broadcast managed by FAA SBS. It provides an FAA approved source for METAR, TAF, WINDS, PIREPs, NEXRAD, AIRMET, SIGMET, and TFR information, and is subject to the broadcast range limits for these products. FIS-B uplink is not an FAA approved source for NOTAMs.

NOTAM 30-Day Limitation

NOTAMs received via FIS-B may not be a complete listing. Active NOTAMs are removed from the FIS-B data stream 30 days after issuance. Before flight, review all necessary aeronautical and meteorological information from official sources.

For more information, consult AC 00-63A or latest revision.
FIS-B Weather Display

FIS-B weather data displays on the dedicated weather page and as overlays on Map. No pilot action is required to receive FIS-B weather information.

The example below shows the NEXRAD precipitation data overlaying land and water basemap data.

1 Aircraft Symbol
   Depicts current aircraft position and orientation.

2 North Indicator
   Indicates True north.

3 Page Orientation Label
   Reflects the selected page orientation.

4 Basemap
   Presents a graphical depiction of land and water data.

5 NEXRAD Controls
   Includes source key and animation control. Source options include CONUS, Regional, or Combined.

6 Zoom Scale
   Value adjusts with changes to the current magnification.

7 Product Timestamp
   Displays:
   - Approximate time of data collection for observation products (i.e. the product age)
   - Approximate time of applicability for forecast products
Hazard Awareness

WX INFO BANNER
Tapping any weather icon displays an information banner. When applicable, a pop-up window displays additional data.

<table>
<thead>
<tr>
<th>Banner Information:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Pan mode symbol</td>
</tr>
<tr>
<td>• Bearing and distance to map pointer from aircraft’s current position</td>
</tr>
</tbody>
</table>

WX DISPLAY ORIENTATION
The weather app allows you to set the orientation of the weather display.
Tap **Menu > Orientation**, and select from the following options.

<table>
<thead>
<tr>
<th>Orientation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>North Up</td>
<td>Orients page to True north</td>
</tr>
<tr>
<td>Track Up</td>
<td>Orients page to current aircraft GPS track</td>
</tr>
<tr>
<td>Heading Up</td>
<td>Orients page to current aircraft heading (requires heading data source interface)</td>
</tr>
</tbody>
</table>

Page orientation label changes to reflect the selected orientation.

Aircraft Symbol
**Position & Orientation**

- The tip represents actual aircraft location
- Symbol type is dependent upon configuration
- This feature is absent if a GPS source is not available
FIS-B Weather Setup

Tap **Menu** to access weather setup options. This page also provides access to the FIS-B Status page for viewing raw text reports, and checking ground reception status reside.

### Map WX Overlays
Overlay controls reside in the Map setup menu.
Home > **Map** > **Menu** > Select from **NEXRAD, METAR, Lightning, and TFR.**
# FIS-B Weather Products

When available, FIS-B weather products display as follows.

<table>
<thead>
<tr>
<th>FIS-B WEATHER PRODUCT</th>
<th>WEATHER DISPLAY</th>
</tr>
</thead>

Product Present: ●
Product Status

View the status of all FIS-B weather products. States include:

- Unavailable
- Awaiting Data
- Data Available

From the FIS-B menu, tap **FIS-B Status**.

This page is also accessible from the ADS-B Status page.

Product Legends

A scrollable legend provides relevant product colors and symbols. Definitions are organized by product function.

1. Tap **Menu > Legend**.
2. Use the inner knob to view the available product legends.
Hazard Awareness

Product Age

NOTE

Data contained within a composite weather product may be older than its weather product age and should never be considered current.

A timestamp identifies the approximate time of data collection for each weather product. For quick reference, the age of each active weather product is calculated and shown in a color-coded side bar on the FIS-B Weather page.

TIMESTAMP COLOR DEFINITIONS

Yellow
Weather product considered stale. Its age is older than half its expiration time.
A weather product may be amber when its issue date and time occurs in the future by more than the complete expiration time for the requested weather product (e.g., some TFRs).

Green
Weather product considered current. Its age is newer than half its expiration time.
Tapping timestamp window displays the time for all green colored weather products.

Gray
Weather product data is one of the following:
• Expired
• Not received
• Not supported at the selected altitude
“No Data” or “ALT UNAVBL” displays next to the weather product title.

FIS-B weather product update and transmission intervals are published in the SBS Description Document associated with TSO-C157b. This information is available electronically at the FAA’s Regulatory and Guidance Library: https://rgl.faa.gov/
FIS-B NEXRAD

**WARNING**

*Never use NEXRAD WEATHER for MANEUVERING IN, NEAR, OR AROUND AREAS OF HAZARDOUS WEATHER. NEXRAD images are snapshots of past weather data. They are not safe for use as real time depictions of nearby weather activity.*

---

NEXRAD weather radar displays a mosaic of precipitation data, colored according to reflectivity. Composite reflectivity images depict the highest radar energy received from multiple antenna tilt angles at various altitudes. Base reflectivity images depict radar returns from the lowest antenna tilt angle. Per AC 00-63A, FIS-B CONUS and Regional NEXRAD are composite reflectivity images.

The precipitation intensity level reflected by each pixel represents the highest level of composite radar reflectivity data sampled in that location.

A clear understanding of ground-based Doppler weather radar capabilities will allow you to interpret the NEXRAD weather imagery in the safest way possible. The National Oceanic and Atmospheric Administration hosts a description of the technology on its website: [https://www.weather.gov/jetstream/doppler_intro](https://www.weather.gov/jetstream/doppler_intro)

**RADAR DATA ANIMATIONS**

To depict trending weather movements over time, an animation function stitches the last three to six received radar images together in sequence, from oldest to newest, and replays them on a continuous loop.

Play and stop controls are active when three or more NEXRAD images are available for playback.
CONUS & REGIONAL NEXRAD

FIS-B NEXRAD is uplinked to the aircraft as two separate weather products: CONUS and Regional NEXRAD. Both products display individually or simultaneously, separated by a white hash-marked boundary, based on source selection.

Depending on the locations of received FIS-B ground stations, Regional NEXRAD coverage can extend as far as 250 nm around an aircraft’s position. Aircraft flying at higher altitudes typically receive data from more ground stations than aircraft flying at low altitudes.

Turbulence, Icing, Lightning, and Cloud Tops are regional with a rectangular border. Any areas lacking data within the border are masked.

FIS-B NEXRAD does not differentiate between liquid and frozen precipitation types.

Source options are selectable from the weather setup menu or the NEXRAD key at the bottom left of the FIS-B Weather page. The key label changes to reflect the active source.

CONUS
- Large, low-resolution weather image for the entire continental U.S.
- Pixels are 7.5 min (7.5 nm = 13.89 km) wide by 5 min (5 nm = 9.26 km) wide

Regional
- High-resolution weather image with limited range, centered around each broadcasting ground station
- Pixels are 1.5 min (1.5 nm = 2.78 km) wide by 1 min (1 nm = 1.852 km) tall
- Each weather pixel varies with latitude. Above 60° latitude, pixel block width doubles to 3 min/nm for regional maps

Combined
- Both CONUS and Regional NEXRAD images display simultaneously
- White hash mark indicates regional boundary
**METARs and TAFs**

METAR and TAF reports provide information on current and forecast conditions. Colored METAR flags display when a METAR reporting station is matched with a corresponding navigation database identifier.

When selected, the METAR is decoded and displayed above the original METAR text. METARs are provided only in areas covered by the navigation database currently loaded.

**METAR SYMBOLS**

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

Hazard Awareness

Graphical AIRMETs

Graphical AIRMETs (G-AIRMETs) display more weather phenomena than textual AIRMETs, while eliminating the need to interpret raw text. Updates occur four times daily.

Select any G-AIRMET line to view details.

G-AIRMET SETTINGS

Forecast Settings:

**Current (Auto)**

Displays active graphical records based on the current UTC.

Function automatically switches from 0 hr to 3 hr forecasts.

**All Forecasts**

Displays the most recent, non-expired graphical records.

Forecast periods include 0 hr, 3 hr, and 6 hr.

Filtering options allow you to mitigate page clutter. Forecast and filter selections are accessible from the FIS-B Weather menu.
G-AIRMET Filters

<table>
<thead>
<tr>
<th>Freezing Level</th>
<th>Mountain Obscuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Icing</td>
<td>Surface Winds</td>
</tr>
<tr>
<td>IFR</td>
<td>Turbulence</td>
</tr>
<tr>
<td></td>
<td>Low-level Wind Shear</td>
</tr>
</tbody>
</table>

To enable graphical AIRMETs:
2. Toggle G-AIRMET on.
3. Tap Settings.
4. Select one or more filters.
5. Select between Current (Auto) and All Forecasts.
6. Return to the FIS-B Weather page.
Hazard Awareness

SIGMETs

The SIGMET overlay draws the geographical boundaries of received SIGMETs on the dedicated weather page. Convective and non-convective SiGnificant METerological Information combine in a textual report and display graphically for the observed or forecast region.

Tapping a SIGMET opens a detailed report.

PIREPs

PIREPs are pilot-generated weather reports that may contain non-forecast adverse weather conditions, such as low in-flight visibility, icing conditions, wind shear, and turbulence.

PIREP SYMBOLS

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Routine (UA)</td>
<td>PIREPs are issued as either Routine (UA) or Urgent (UUA). Tapping a PIREP symbol displays textual details.</td>
</tr>
<tr>
<td>Urgent (UUA)</td>
<td></td>
</tr>
<tr>
<td>Route</td>
<td></td>
</tr>
</tbody>
</table>
**Cloud Tops**

Indicates the altitude of the highest visible portions of a cloud at the time of forecast.

Cloud top data is generated by a computer model and has limited accuracy compared to actual conditions.

---

**Lightning**

Strike location is an estimate of its center. Lightning strikes display as a lightning bolt.

---

**Center Weather Advisory**

These advisories communicate en route and terminal weather conditions expected to occur within the next two hours. Information is valid for up to 2 hours.
Hazard Awareness

Winds/Temps Aloft

Indicates wind speed and direction, and temperature forecast for the specified altitude.

Altitude range: surface to 45,000 ft
The wind barb extends outward from the reporting location dot in the direction of wind origination.

Up and down arrow keys adjust altitude for altitude-based weather products.

Not all altitudes provide winds/temps aloft forecasts for all regions.

Icing

NOTE
Due to the incremental and overlapping nature of the FIS broadcast, timestamps, regional coverage, and map data availability may vary with altitude for computer generated FIS-B icing forecasts.

Icing potential is not a forecast, but a presentation of icing potential at the time of analysis. The icing timestamp shows the valid time in UTC.

Supercooled Large Droplet (SLD) icing conditions are characterized by the presence of relatively large, super cooled water droplets indicative of freezing drizzle and freezing rain aloft. SLD threat areas are depicted as black and pink blocks over the icing colors.

The Icing potential shows a graphic view of the current icing conditions. Categories are Trace, Light, Moderate, and Heavy.

Altitude Range:
2,000 to 24,000 ft (at 2,000 ft intervals)
Turbulence

NOTE
Due to the incremental and overlapping nature of the FIS broadcast, timestamps, regional coverage, and map data availability may vary with altitude for FIS-B turbulence forecasts.

Turbulence is classified as light, moderate, severe or extreme. Turbulence data is intended to supplement G-AIRMETs and SIGMETs.

The turbulence timestamp shows the valid time in UTC.

Altitude Range:
2,000 to 24,000 ft (at 2,000 ft intervals)

TFRs

WARNING
Do not exclusively use datalink services for TFR information. TFR Depictions may not be a complete listing and may vary between cockpit devices. Always confirm TFR information with official sources such as Flight Service Stations or Air Traffic Control.

TFRs identify areas of airspace where aircraft are temporarily restricted from operating. They are routinely issued for occurrences such as dignitary visits, military activities, and forest fires.

Tapping a TFR displays textual details.
Raw Text Reports

View raw textual data for a FIS-B product.

1. Open the FIS-B WX Status page.
2. Tap **Raw Text Reports**.
3. Select a weather product.

The latest uploaded data for the product displays on a dedicated page.

Multiple reporting stations appear in a list. Tapping **View** displays raw text for the corresponding identifier.

To view information about products not available due to a service outage, select **Unavailable Products**.
READING WINDS/TEMPS ALOFT REPORTS

Tapping **Winds/Temps Aloft** displays a forecast of winds and temperatures for different altitudes. Temperature forecasts are not included for altitudes below 2,500 ft AGL.

On the raw text report, altitude values do not align with the corresponding forecast. Match the color of the altitude and forecast to interpret the information.

Color markings are for reference only.

Hazard Awareness

FIS-B Ground Reception Status

FEATURE REQUIREMENTS

- UAT transceiver (powered)

Monitor FIS-B ground station transmission status from the FIS-B Reception page. A current report lists completeness of NOTAM-TFR, G-AIRMET, CWA, and SIGMET data for all received ground stations.

For the received ground station, the station range field indicates complete/incomplete status only for those products within the ground station’s range.

1. Open the FIS-B WX Status page.
2. Tap Radio Stations.
Traffic Awareness

FEATURE REQUIREMENTS
- GPS 175/GNC 355 with External ADS-B In product (GDL 88, GTX 345)
- OR
  - GNX 375

FEATURE LIMITATIONS
- Available functions and alerting features are dependent upon the ADS-B traffic system source

ADS-B Features
- Runway and taxiway depiction during SURF mode (< 2 nm range scale)
- Selectable traffic icons display intruder and vector information
- Customizable motion vectors (type, duration)

Traffic Applications

FEATURE REQUIREMENTS
- Aviation database (SURF only)

FEATURE LIMITATIONS
- ATAS does not alert to traffic on ground

ADS-B In traffic support three applications:
- AIRB: Basic Airborne Application
- ATAS: ADS-B Traffic Advisory System
- SURF: Surface Situation Awareness

AIRB is considered the fundamental airborne traffic application. ATAS provides alerts when airborne traffic trajectories pose a potential collision risk. SURF provides additional situational awareness when you are on ground or within the terminal environment.
# Hazard Awareness

## Traffic Application Failures

During normal operation, the “ADS: On” status annunciation means that both AIRB and ATAS applications are active. In the rare event of an application failure, it is possible that only one of the applications may be active. The unit provides indications to reflect which application is no longer operational.

- ADS field indicates “On”
- If AIRB is active and ATAS is failed, the unit displays the system message: “ADS-B traffic alerting function inoperative”
- If AIRB is failed and ATAS is active (and still capable of providing a no-bearing aural alert), “Unavailable” annunciates across the traffic display

## TRAFFIC APPLICATIONS

<table>
<thead>
<tr>
<th>AIRB &amp; ATAS</th>
<th>SURF</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Both active when ADS-B is “On” (airborne traffic indications are available; ATAS arms to provide airborne alerts)</td>
<td>- Active on ground or within the terminal environment (&lt;5 nm and &lt;1,500 ft above field elevation)</td>
</tr>
<tr>
<td>- Alerts occur when potential collision risks are determined based on current airborne position and trajectory and the position and trajectories of other airborne traffic</td>
<td>- Traffic on ground may display when SURF is active</td>
</tr>
<tr>
<td>- Airborne traffic alerts only (no alerts on ground or for traffic on the ground)</td>
<td>- Runway and taxiway depictions when the zoom scale is &lt;2 nm (Traffic page only)</td>
</tr>
<tr>
<td>- Nominally allow 20 to 40 seconds for flight crew response</td>
<td>- Depicts only traffic and ground vehicles equipped with ADS-B Out</td>
</tr>
<tr>
<td>- Provide aural alerting when traffic alerts occur</td>
<td></td>
</tr>
</tbody>
</table>
Traffic Display

Collision avoidance and traffic surveillance data display on the dedicated Traffic page and as overlays on Map.

The Traffic page displays intruding traffic in relation to the current position and altitude of the aircraft without clutter from other data.

<table>
<thead>
<tr>
<th>Ownership Icon</th>
<th>Depicts current aircraft position.</th>

Off-scale Non-directional Alerted Traffic
Hazard Awareness

TRAFFIC GROUPS

When the Traffic Grouping function is active, traffic within close proximity of each other may display as a group.

- Asterisk indicates that the target belongs to a group
- Relative proximity of the closest target determines color
- Depiction is of the most immediate threat

OFF SCALE TRAFFIC ALERTS

Off scale (out of range) traffic alerts are depicted as half yellow symbols on the outermost range ring at the correct bearing.

TRAFFIC OVERLAY STATUS ICON (MAP ONLY)

This icon appears on Map when the traffic overlay is active. It is absent when the overlay function is off.

An “X” appears over the icon when the overlay is on but unavailable.
Traffic Setup

Tap **Menu** to access pilot selectable settings as well as the self-test and ADS-B display functions.

### Map Traffic Overlay
The overlay control resides in the Map setup menu.
Home > **Map > Menu > Select Traffic.**

---

**Traffic Menu**

- ** ADS-B Display**
  - Enable AIRB/ATAS. Depending on the state of the aircraft, the system may additionally select SURF. Selecting Off disables the ADS-B In function.

- **Test**
  - Initiate a test of the traffic system. A test pattern displays on the page. System returns to normal operating mode once the test is complete. [1]

- **Motion Vector**
  - Select motion vector type. Selecting Off removes all motion vectors from the display.
  - Options: Absolute, Relative, Off

- **Vector Duration**
  - Select the amount of time represented by the endpoint.
  - Options range from 30 seconds to 5 minutes.
  - A longer duration results in a longer vector.

- **Altitude Filter**
  - Select filter range.
  - Options: Normal, Above, Below, Unrestricted

- **Traffic Grouping**
  - Show targets in close proximity as a group. When active, the highest priority target is displayed. Asterisk indicates one or more targets are decluttered by grouping.

[1] Available only when aircraft is on ground (i.e., standby mode) and **ADS-B Display** is off.
Hazard Awareness

Motion Vectors

FEATURE LIMITATIONS

- Motion vectors display on the Traffic page only

A motion vector is a line extending from the nose of an intruder icon. Its orientation represents the intruder’s direction and movement.

A yellow vector indicates when traffic meets intruding TA criteria (i.e., closing rate, distance, vertical separation).

Altitude Filtering

Pilot selectable filters limit the display of traffic to a specific altitude range relative to the altitude of the ownship.

Filter selections apply to both the Traffic page and the traffic overlay on Map.

<table>
<thead>
<tr>
<th>SELECTION</th>
<th>LABEL</th>
<th>ALTITUDE RANGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal</td>
<td>NORM</td>
<td>-2,700 ft to 2,700 ft</td>

</tr>
</tbody>
</table>
**Traffic Interactions**

### Selected Traffic Information
- Registration/call sign
- Vehicle type
- Closure rate
- Track
- Ground speed

Selecting a traffic symbol displays information about the aircraft in the upper right corner of the page. Selections remain active through altitude filtering, zoom scale, and page changes.

Tapping **Next** repeatedly steps through multiple symbols spaced closely together.

When a traffic alert occurs, the **Mute Alert** option temporarily replaces the **Next** key.
## Traffic Annunciations

<table>
<thead>
<tr>
<th>ANNUNCIATION</th>
<th>DESCRIPTION</th>

<td>Active motion vector type is relative.</td>
</tr>
<tr>
<td>Relative Motion - UNAVAILABLE</td>
<td>Aircraft is not airborne and the active motion vector type is relative.</td>
</tr>
<tr>
<td>Unavailable</td>
<td>Necessary traffic data not available.</td>
</tr>
</tbody>
</table>
Traffic Alerting

Traffic Alert Types

- Textual annunciations at the bottom of the screen
- Color-coded target icons on Traffic page
- Pop-up window when another page is active

Traffic alerts occur anytime there is an increase in the number of traffic advisories. They remain active until the area is clear of all TAs.

FEATURE LIMITATIONS

- Aural traffic alerts available on GNX 375 only
- Mute alert function is applicable only to the active aural alert (does not mute future alerts)

<table>
<thead>
<tr>
<th>ANNUNCIATION</th>
<th>ALERT TYPE</th>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

To silence the active traffic alert voice message, tap Mute Alert.
Hazard Awareness

ALERTING PARAMETERS

Alerting Parameter Considerations

- Altitude separation and trend
- Angle
- Speed
- Closure rate of each aircraft (ownship and target)

Traffic alerting parameters consider several factors in order to allow you enough time to acquire the target and maneuver the aircraft away from conflicting traffic.

To minimize nuisance alerts, traffic alerting sensitivity is adaptive, based on altitude above ground level. No aural alerts are given below 500 ft.
Terrain Awareness

**WARNING**

_Do not use Terrain and obstacle data to navigate or maneuver around terrain. They are an aid to situational awareness only._

**FEATURE REQUIREMENTS**

All terrain functions require the following components to operate properly.
- Valid 3-D GPS position for terrain and obstacle data display
- Valid terrain/obstacle database

**FEATURE LIMITATIONS**

- Alerting functions are dependent upon the configured terrain alerting options
- Terrain Alerting functions do not provide aural alerts

**Terrain Configurations**

**Available Terrain Modes**

- Terrain Proximity
- Terrain Alerting (FLTA/PDA)

Terrain Proximity displays relative elevations on moving map depictions (Terrain page, Map). It does not provide visual alerts.

Terrain Alerting adds Forward Looking Terrain Alert (FLTA) and Premature Descent Alert (PDA) functions. These include visual alerts when the aircraft flies below an alerting threshold.
GPS Altitude for Terrain

FEATURE REQUIREMENTS
GPS altitude is derived from satellite measurements. To acquire an accurate 3-D fix (latitude, longitude, altitude), a minimum of four operating satellites must be in view of the GPS receiver antenna.

The terrain system uses GPS altitude and position data to:

- Create a 2-D image of surrounding terrain and obstacles relative to the aircraft’s position and altitude
- Calculate the aircraft’s flight path in relation to surrounding terrain and obstacles
- Predict hazardous terrain conditions and issue alerts

GSL ALTITUDE & INDICATED ALTITUDE
The unit converts GPS altitude data to GSL altitude (i.e., the geometric altitude relative to MSL) for use in terrain functions. All Terrain page depictions and elevation indications are in GSL.

Variations between GSL altitude and the aircraft’s corrected barometric altitude (or indicated altitude) are common. As a result, Terrain page altitude data may differ from current altimeter readings. Both GSL altitude and indicated altitude represent height above MSL, but differ in accuracy and reliability.

<table>
<thead>
<tr>
<th>GSL ALTITUDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Highly accurate and reliable geometric altitude source</td>
</tr>
<tr>
<td>Does not require local altimeter settings to determine height above MSL</td>
</tr>
<tr>
<td>Not subject to pressure and temperature variations</td>
</tr>
<tr>
<td>Affected primarily by satellite geometry</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>INDICATED ALTITUDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Barometric altitude source corrected for pressure variations</td>
</tr>
<tr>
<td>Requires frequent altimeter setting adjustment to determine height above MSL</td>
</tr>
<tr>
<td>Subject to local atmospheric conditions</td>
</tr>
<tr>
<td>Affected by variations in pressure, temperature, and lapse rate</td>
</tr>
</tbody>
</table>
Database Limitations

**NOTE**

Garmin cross-validates terrain and obstacle data in accordance with TSO-C151c. However, the information should never be considered all-inclusive. Database inaccuracies or omissions may exist.

Terrain and obstacle data are not available when the aircraft is operating outside of the installed database coverage area.

Garmin obtains terrain and obstacle data from government sources and cannot independently verify the accuracy and completeness of the information. Pilots must familiarize themselves with the appropriate charts and other data for safe flight.

<table>
<thead>
<tr>
<th>DATABASE</th>
<th>LIMITATION</th>
</tr>
</thead>
<tbody>

</tbody>
</table>
AUTOMATIC ZOOM

In the event an alert occurs, the page automatically zooms to provide the best depiction of that alerted terrain, obstacle, or power line.

AUTOMATIC DATA REMOVAL

Automatic removal of obstacle and power line data occurs at range scales greater than 10 nm.

Terrain Setup

Terrain Inhibit
- Inhibits visual alerts for terrain, obstacles, and power lines

View
- 360 changes view format to a 360° ring encircling the aircraft (default view)
- Arc changes view format to a forward-looking 120° arc

Flight Plan
- Toggles the active flight plan overlay on or off (Terrain page only)

Legend
- Toggles the Terrain and Obstacle/Wire legend on or off

Tap Menu to access pilot selectable settings as well as self-test and alert inhibit functions.

Map Terrain Overlays
Overlay controls reside in the Map setup menu.
Home > Map > Menu > Select from Terrain and OBST/Wires.
Hazard Awareness

Terrain Proximity

FEATURE LIMITATIONS

• Terrain and obstacle depictions are relative to aircraft altitude.
• Obstacle depictions are dependent upon database
• Does not provide visual or aural alerts

View color depictions of terrain and obstacle elevations relative to your current position and altitude.

Terrain Proximity Features

• Non-TCO C151c certified terrain display system
• 2-D graphical representation of surrounding terrain, obstacles, and power lines relative to aircraft position and altitude
• Declutter automatically removes obstacle and power line data at large ranges
• Continuous monitoring of database validity, GPS and hardware status
• Displays when higher level terrain functions are active

Terrain Elevation Depictions

Color shading depicts terrain elevations relative to the aircraft’s position and altitude. Colors automatically adjust as the aircraft’s altitude changes.

Terrain Shading

1 Red 2 Yellow 3 Black
Obstacle Elevation Depictions

**FEATURE LIMITATIONS**
- Obstacles more than 2,000 ft below current altitude do not display

</tr>
</tbody>
</table>

OBS racle GROUPS

An asterisk indicates when the obstacle database contains only a single latitude and longitude for a group of obstacles. This occurrence is rare.
Terrain Alerting

Receive visual alerts for potential flight path conflicts involving terrain, obstacles, or power lines. Alerting behavior is determined at installation.

**Terrain Alerting Features**

- Non-TSO C151c certified terrain alerting system
- FLTA functions: RTC, RLC, ROC, ITI, ILI, and IOI
- Premature Descent alerts
- Terrain depictions and display overlays
- Cautions and warnings indicate alert severity and threat type
- Textual annunciations
- Pop-up alerts
- Threat location indication on Terrain page and Map
- Self-test and alert inhibit functionality

**Alert Types**

Available alerting functions depend on the installed terrain system.

<table>

**Hazard Awareness**

### Inhibiting FLTA & PDA Alerts

![Inhibit Mode Annunciation](image)

**NOTE**

*Always use discretion when inhibiting FLTA or PDA alerts. Re-activate the alert function when appropriate.*

The **Terrain Inhibit** control is accessible via the terrain pop-up alert or Terrain page menu.

Runway surface and minimum length settings impact the terrain alerting criteria when considering potential runways.

<table>
<thead>
<tr>
<th>INHIBITS</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>INHIBIT</td>
<td>Manually inhibits FLTA or PDA visual alerts for low altitude approaches.</td>
</tr>
<tr>
<td>AUTOMATIC INHIBIT</td>
<td>Automatically inhibits FLTA alerts when the aircraft meets the following approach criteria.</td>
</tr>
<tr>
<td></td>
<td>• Altitude &lt;200 ft above runway elevation</td>
</tr>
<tr>
<td></td>
<td>• Position &lt;0.5 nm off approach end or between each runway end</td>
</tr>
</tbody>
</table>

Tapping **Terrain Inhibit** generates a pop-up. Confirm the request to inhibit terrain alerts.

ADVISORY MESSAGES ........................................................................................................6-2
Advisory Messages

Advisories are system-related messages relative to the display.

- Most recent advisories appear at the top of list
- View-once advisories remain in queue until viewed by the pilot
- Persistent (or conditional) advisories remain active until the indicated condition is resolved

All advisories are logged in the unit’s internal storage. This log may be exported to an SD card.

Message Key

This key displays at the left edge of the screen when an advisory condition is present. Tapping the key once displays an advisory list. Tapping it again acknowledges all active advisories and closes the list.

- Flashes when a new advisory is present
- Turns solid once all active advisories are acknowledged
- No longer displays after all active advisories are cleared

Airspace Advisories

Alerted airspace types are based on pilot settings in the Airspace Alerts page. These advisories are informational only. No action is necessary.

<table>

</tr>
<tr>
<td>NAV angles are referenced to True north (ºT).</td>
<td>NAV angle is set to True.</td>
<td>No action necessary.</td>
</tr>
<tr>
<td>NAV angles are referenced to a user set value (ºU).</td>
<td>NAV angle is set to User.</td>
<td>No action necessary.</td>
</tr>
<tr>
<td>Non-WGS84 Waypoint. See pilot’s guide. Location may be different than where surveyed for <code>&lt;WPT&gt;</code></td>
<td>The active waypoint does not reference the WGS84 datum.</td>
<td>No action necessary. For more information, read “Points About Non-WGS84 Waypoints” in this section.</td>
</tr>
</tbody>
</table>
Points About Non-WGS84 Waypoints

- There are several types of geodetic datums that a waypoint can reference.
- TSO-C146 requires that all waypoints reference the WGS84 datum, but allows for navigation to coordinates not compliant with this standard as long as the pilot is notified of the potential difference in location.
- Not all waypoints in the navigation database reference the WGS84 datum. For some of these coordinates the reference datum is unknown. In such cases, the “Non-WGS84 Waypoint” advisory displays.
- Garmin cannot determine the exact proximity of a non-compliant waypoint to the WGS84 datum in use by the system. Typically, the distance is < 2 nm.
- Most non-WGS84 waypoints are outside of the United States.

Pilot Specified Advisories

These advisories display when the associated timer expires or reaches a preset value. They are informational only. No action is necessary.

<table>
<thead>

</thead>
</table>
| <Unit> knob-push stuck. | Dual concentric inner knob is stuck. | 1. Push the inner knob again. If it remains stuck, use the corresponding touchscreen controls.  
2. Contact dealer if the problem persists. |
| <Unit> cooling fan failed. | • Unit detects a cooling fan fault.  
• Coloration may be incorrect.  
• Backlight may dim to reduce power and heat. | Extended operation at high temperatures is not recommended as damage to the unit may occur. Contact dealer for service. |
| <Unit> over temp.  
Reducing backlight brightness. | Unit temperature exceeds the over temperature threshold. Backlight dims to reduce power and heat. | Decrease cabin temperature and increase cabin airflow near the unit. If the problem persists, contact dealer for service. |
| <Unit> under temp. | Unit temperature is below the normal operating temperature threshold. | If the problem persists, contact dealer for service. |
| Pilot stored data was lost. Recheck settings. | An error occurred in the pilot stored data. The following user settings may be lost.  
• Map menu settings  
• User waypoints  
• Catalog flight plans  
• User field settings  
• Unit convention selection | Recheck settings. |
<p>| Remote Go Around key is stuck. | System detects the remote go around key/switch depressed for at least 30 seconds. It will now ignore this input. | Press the key/switch again. If it remains stuck, contact dealer for service. |</p>

<td>No action necessary.</td>
</tr>
<tr>
<td>User waypoints imported successfully - existing waypoints reused.</td>
<td>User waypoint import successful. Import function reuses existing user waypoints instead of creating duplicates.</td>
<td>No action necessary.</td>
</tr>
</tbody>
</table>
7 Qualification

GLOVE QUALIFICATION

NOTE
The procedures described in this section are not authorized for completion during flight. All tasks must be performed while the aircraft is on the ground.
Glove Qualification

The touchscreen uses capacitive touch technology to sense the proximity of skin to the display. A glove creates a barrier between the skin and the display glass, potentially reducing the ability of the display to detect touches.

This procedure qualifies a specific glove for use with the touchscreen. Due to differences in finger size and glove size, the qualification procedure is specific to the pilot/glove combination. Multiple units must be evaluated individually.

GLOVE SELECTION CONSIDERATIONS

• Thinner gloves perform better than thicker gloves.
• Leather gloves, and gloves designed specifically for use with capacitive touchscreen devices, are often found to be acceptable.
• To improve touchscreen sensitivity while wearing gloves, use the pad of your finger instead of the tip during touch interactions.

GLOVE QUALIFICATION GUIDANCE

• Checklist 1 contains the tasks required to qualify a glove.
• Checklist 2 contains tasks that are not required to qualify a glove, but may limit how some functions are accessed while wearing a glove.
GLOVE QUALIFICATION STEPS
Complete only the tasks for the capabilities relevant to the installed navigator.

1. Sitting in the pilot’s seat, start the unit in normal mode.
2. Perform the tasks listed in each checklist, tapping the specified keys with a non-gloved finger. It is not necessary to record any results for this step.
3. Repeat step 3 using a gloved hand.
4. For each task, determine whether the touchscreen response is the same or worse than without the glove.
5. Record the results in the applicable column. Items that may cause the operation to be worse include, but are not limited to:
   • Multiple attempts to select a key
   • Unintentional selection of adjacent key(s)
   • Excessive force on the touchscreen to select a key
6. If all applicable tasks produce the same response with and without a glove, you may use the glove in flight.

GLOVE QUALIFICATION PROCEDURE

Pilot: ________________________________

Glove Description: ______________________

Circle the applicable navigator.
